jbs@rti.rti.org writes:
> Perhaps he wasn't on a commercial plane?

Good point. I just assumed he was on an airliner. Most of what I said
applies to small planes too, but it's not nearly as critical, as the pilot will be aware
that you're transmitting, and coupled ILS approaches are much
less common in small planes.

That doesn't change a thing. The manufacturer says "Don't use radio gear in our cars". Suppose you had a problem with the car that should be covered by a warranty; I would be very upset if my warranty was voided because I'd used a radio in the car.

><asbestos off... Though I may need it back later! ;)>

What did you need asbestos for? What I'd like to know is the supposed "dangerous behavior" of those Ford and GM cars... what exactly is the claim? As I recall, the Audi "sudden acceleration" fiasco was essentially a hoax fueled by scum-exuding lawyers; I can't help but think that is happening now with RF fields.

Anyway, Toyota should be able to make their cars resistant to the effects of RF, and specify them as such. I would highly recommend asking before buying a car, and, if the manufacturer won't say "Yes, you may use radios", then don't buy the car and make sure the car maker knows what your problem is.

3. EA9UK & Z21BL: QSL info wanted...

Newsgroup: rec.radio.amateur.misc

From: charlier@hplsla.hp.com
Message-ID: <20360072@hplsla.hp.com>
Source record: 291910

A couple of stations worked during the ARRL phone DX contest in Feb,
that I'd like to get a QSL from. My usual sources have turned up nothing...
Can anyone help with routes/addresses?

EA9UK
Z21BL

As a side note, both of these were real easy to work, much to my surprise;
no pile-ups. (God I hate pile-ups! Especially after listening to the messes
on the Clipperton frequencies. But don't get me started...)
I think I caught the Z21 just after he got on, and I don't
think most people realized what a good catch EA9 is (not just Spain,
he's actually in Africa, a separate DXCC country.)

4. A (long) look at SWR & directional pwr mtrs

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-16 22:42:53 UTC
From: tomb@hplsla.hp.com
Message-ID: <20360073@hplsla.hp.com>
Source record: 291934

In a recent thread about swr and coax lengths, I saw some interesting comments about SWR bridges--comments that made me think many folk don't understand them very well and consider them to be "black magic" of some sort. Well, I'm _quite_ sure they aren't black magic ;-) I may not fully understand how they work myself, but wanted to pass along some thoughts about them. I'm sure if others know better, they will correct the mis-information below.

By the way, this posting is a bit long and has some equations in it. If you are put off by equations, but are interested in the topic, you may wish to skip to the last five or so paragraphs which contain some summary notes and conclusions. But the math is all straightforward simple algebra (multiplication, addition and subtraction), no sines and cosines, even!

First off, there seems to be the feeling that swr bridges that aren't just Wheatstone bridges with possible reactive elements added are all distributed-line beasts. I don't believe it's necessary to think of it as a distributed system: if you have a six inch length of coax with a wire slipped under the shield, or a similar arrangement in a box, or the typical Bird slug arrangement, that length is so short compared with a wavelength that you should do just fine thinking of it as a lumped system. One piece of metal may be simultaneously acting as an inductor and a capacitor, but that doesn't mean you have to think of it as distributed in the sense of a transmission line. So let's step back a bit and look at what's going on in a line that's carrying power, then get back to looking at typical bridges as sets of lumped components and see if they make sense.

Coax and parallel-wire lines are built and sold with particular impedances. Coax that hams use is typically 50 ohm or 75 ohm, and parallel-wire lines are available in 75, 300, 450 and 600 ohm impedances. Of course, you can make a line of any particular impedance over a fairly wide range. But what does that impedance mean? One way to look at it is it's the impedance a source connected to the line will see when it's first turned on, until its signal has a chance to go down the line and reflect off the far end and come back. It's also the impedance the source will continue to see if there's a load connected to the far end of the line that absorbs ALL the power coming down the line. In addition, it's the impedance a load must be to accept all the power, so none is reflected back toward the source.

One more thing, and this is important: if you can probe inside the line without disturbing it, _AND_ there's power flowing ONE DIRECTION ONLY (which means either the line is terminated without reflections or you're

looking at it before any reflections got back to you yet), then the ratio of voltage across the line to current through it will be equal to its impedance. In fact, if you know the power is flowing one way only, with no reverse power, you can tell which way if you can measure instantaneous voltage and current: if current is flowing, let's say, to the right in the more positive conductor (and the impedance is purely resistive), the power is flowing to the right.

Can we use this information to separately _measure_ the power going each direction in the line? If we can, then we can also calculate the SWR, which is simply the sum of the RMS voltages of the forward and reverse waves over their difference. We can define SWR in this way, even though the line may be too short to actually measure voltage nodes and antinodes on. There can still be a forward and a reverse wave, even on a very short line.

In a situation where there's a load that doesn't absorb all the incident power, some power is reflected, and the result is an "SWR." However, let's keep this entirely general. We'll assume two waves passing the point in the line we're going to inspect, one going "forward," and one going "reverse." So below, "f" indicates a forward wave, and "r" indicates reverse. (Sorry I can't use real subscripts in this asccii description!) I could assume these waves are sinusoidal with the same frequency (but possibly different phases), as would be the case with reflected power, but let's not do that: they will just be time-varying signals. Since the transmission line is a linear system, at least in the power ranges hams use, the voltages and currents from the two waves will simply add. Let's assume the line runs left to right, and "forward" wave propagation is left to right. If we turn off the reverse wave generator so only a forward wave is flowing, then we'll measure

vf(t) (1)
if(t) = vf(t)/Zo (2)

at the monitoring point. Zo is the characteristic impedance of the line: remember, for a wave in a single direction, the voltage/current ratio is just the characteristic impedance of the line. vf(t) is the forward-wave voltage as a function of time, and if(t) is the corresponding current.

Similarly, if we turn off the forward generator and run only the reverse generator, we'll measure

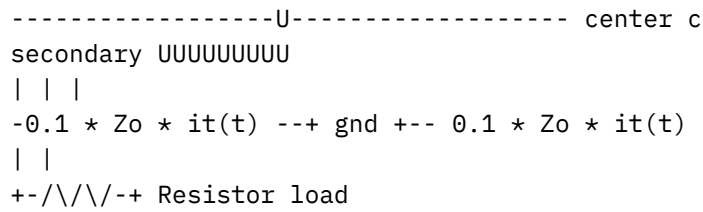
vr(t) (3)
ir(t) = -vr(t)/Zo (4)

at the monitoring point. Note the negative sign in (4): it results from measuring current in the same direction as we did for (2) for the forward wave. You can let (4) have a positive sign, but if you do, then (2) must have a negative sign! The sign assumed above measures positive current as flowing left to right, with the setup described.

Now we use the linear-system property to see what happens if both generators run at the same time: the "t" "subscript" in (5) and (6) represents "total:"

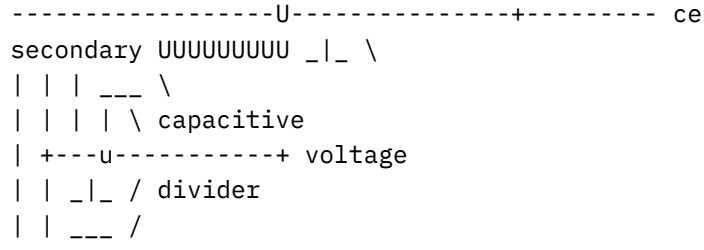
vt(t) = vf(t) + vr(t) (5)
it(t) = if(t) + ir(t) (6)
= vf(t)/Zo - vr(t)/Zo (6a)

Up to this point we assumed we could simply measure the voltage and the current. Let's consider just how we might do that. If we slip a toroid core over one conductor of the line and have several turns of wire on it, it will act as a transformer. With a load on the secondary, a current through the line (the primary) will cause a current through the secondary, and through the load, and a resulting voltage drop across the load. So we've converted the line current to a proportional voltage, and we can adjust the proportionality constant if we want. So we don't disturb the line, we want to take only a very little power from it to do the monitoring. Let's assume that the total voltage drop across that secondary load is .2 * Zo * it(t). Let's also assume the secondary is center tapped, so _if_ the center tap were grounded, I'd get voltages + .1 * Zo * it(t) and - .1 * Zo * it(t) at one end and the other of the secondary.



For monitoring the voltage: Let's assume we have a voltage divider between the conductors of the line. If it's coaxial line and the outer conductor is considered "ground" potential, then I'll be monitoring the center conductor with respect to the outer conductor. Let's assume the divider has a 1/10 ratio: it picks off 0.1 * the line voltage. It could be a resistive divider, but for RF, it's often easier to use a capacitive divider. We'll assume the voltmeter we use to look at it is high enough impedance that we can use small capacitors and not disturb the line too much.

OK, now let's connect the voltage divider output to the center tap of the current transformer secondary, and see what we get: (Hope the ASCII drawing makes sense!)



```
| | | /
--------------u-------u-----------+-+------ Shield
| | |
vm2(t) --+ +-- vm1(t) +-- gnd ref for vm1 and vm2
| |
+-/\/\/-+ Resistor load
```

vm1(t) = 0.1 * vt(t) + 0.1 * Zo * it(t) (7)
vm2(t) = 0.1 * vt(t) - 0.1 * Zo * it(t) (8)

where vm1 and vm2 are the "monitoring" voltages at each end of the current transformer. Substituting back in from (6a) above, we get:

vm1(t) = 0.1 * vt(t) + 0.1 * vf(t) - 0.1 * vr(t) (7a)
vm2(t) = 0.1 * vt(t) - 0.1 * vf(t) + 0.1 * vr(t) (8a)

But from (5) above, we see vt(t) is just the sum of vf(t) and vr(r), so:

vm1(t) = 0.1 * vf(t) + 0.1 * vr(t) + 0.1 * vf(t) - 0.1 * vr(t)
= 0.1 * vf(t) + 0.1 * vf(t)
= 0.2 * vf(t)

and

vm2(t) = 0.1 * vf(t) + 0.1 * vr(t) - 0.1 * vf(t) + 0.1 * vr(t)
= 0.1 * vr(t) + 0.1 * vr(t)
= 0.2 * vr(t)

*****!!!!!*****

Whoa! What's that? We have voltages at our sampling points that tell us independently the voltage associated with the forward power and the reverse power. And the result didn't depend on any particular relationship between the two, no did it _preclude_ having a forward and reverse that are sinewaves of the same frequency, as would be the case with power reflected off a load, causing an SWR.

Now all we have to do is measure vm1 and vm2; remember, they are RF voltages still--they must be to do the addition and subtraction in (7) and (8). We can use a diode detector, as long as we are careful to calibrate it and realize that at very low powers we won't see anything out of the detector. But if we are going to use the system over a known power range, then we can probably scale the voltages so nonlinearity of the detector isn't a significant problem. For example, 100 watts at 50 ohms is 100 volts peak, and a 1:10 sampler would have 10v peak output (note that the sampler described above is 1:5 by the time we add voltage and current samples). 0.1v output, about the bottom of the diode detector range (if you use standard non-Schottky silicon diodes), is 40dB below that, or 0.1 watts, and if we were looking at that as a reflected wave with 100W going out, the swr would be (10+0.1)/(10-0.1) or 1.02:1. That's not something hams should be worrying about! This does point out, though, that you shouldn't use an SWR meter too far away from it's design power. Note that the Bird meter doesn't have a user

sensitivity adjustment, but uses slugs calibrated for particular powers, which lets them scale the meter properly to account for the diode nonlinearity. That's a key, too: you can calibrate your meter face to read correctly even though the diode detector is operating in a nonlinear region, at least if you are doing it for power. A user sensitivity control can throw off this sort of calibration...

Some more observations: First, the position of the monitoring point in the line doesn't make a bit of difference. (But... see also the second paragraph following this one!) You can move it 1/8 wave, 1/4 wave, or any amount you want, and (neglecting line loss), if that move doesn't disturb the operating conditions of the line, the forward and reflected will read the same. The "doesn't disturb..." part depends on the monitoring circuit to not disturb the line with too much inductance, capacitance or resistance (not add reactance or take away power), and also depends on there not being "antenna currents" on the outside of the line that moving the monitor would disturb, assuming those "antenna currents" were from the load on the line. BTW, one way to test this is to operate the line into an intentionally mismatched load and move the meter to different points along the line. If the load is well shielded, it won't radiate and there should be no antenna currents on the line.

Second: although we've described a monitoring circuit where the current and voltage pickoffs are separate, there's no reason they can't be combined in the same piece of metal. It may take a bit of a leap of faith, but this is exactly what the Birds do, and so do others of the "monimatch" type, where a piece of magnet wire is slipped under the braid of a short length of coax, or where a section of coax is built with copper tubing in a box, with wires mounted along side the tubing (center conductor). Those wires pick off some of the electrical field, and they intercept some of the magnetic field. They are loaded so that the right ratio is achieved: or if it's not, you will get an indication of reflected power when there is none, AND COULD get an indication of lower or higher reflected power than there actually is...

What if the monitor (meter) is calibrated to read correctly at 60 ohms instead of 50 ohms, and you are using 50 ohm line?? Now it's easy to see why moving the meter will make a difference. As far as the meter is concerned, the 50 ohm line is a "series matching stub" in that it isn't the "right" impedance. The 60 ohm meter knows _it's_ right :-) ! In terms of Smith charts, think of 50 ohms in the center, since we're working with 50 ohm coax. Think of a load that's on the circle concentric with the center and passing through 60 ohms. Then if you choose the right length of coax, the meter will see currents and voltages that are just right for a 60 ohm resistive load and it will report that there is no reflected power (even though there _is_ on the 50 ohm line--but remember, there _should_ be since in this case, it's serving as a matching stub for the 60 ohm meter!). However, change the line length by 1/4 wave and the meter now sees a 41-2/3 ohm resistive load, which to the 60 ohm meter represents a sizeable reflected power or SWR (did I get that impedance right, guys and gals?). Moral of this

story: Be sure your meter is calibrated at the line impedance you are using! Check it yourself. You can do this pretty well by using either a low-SWR load of the same impedance as your line, or a long enough length of line that there won't be much power coming back anyway: if you have a length that would be 20dB loss, then round trip it's 40dB and as we saw above, that's only about 1.02:1 SWR. Long, lossy lines make good dummy loads ;-). Anyway, with a known good load connected, if your meter doesn't read zero reflected power (1:1 SWR), then it's not calibrated for your line impedance.

Now there are also directional couplers for UHF and above that are actually a significant portion of a wavelength long, and those are properly analyzed as distributed systems, but most SWR and power meters used by hams are a tiny fraction of a wavelength long and most (almost all??) operate basically as described here. Some, like the Bird, only detect one polarity (direction) at a time, but the operation is the same. (Turning the slug in the Bird reverses the sense of the current detection.) But for example, the Bird sensor is less than one inch long, and at 440MHz, an inch is less than .04 wavelengths.

Seems like there are some other points to make here... I invite others to follow up on this. Hey, what else would I expect in this group?? :-)

73, K7ITM

I wonder if a DX station wanting more than bubber stamp QSO's could control things by controlling their QSL output?

EG, some pushy so and so breaks in, so work him, and then say "no QSL" word should go round nicely and you can get back to an enjoyable ragchew. Appearing with a rare prefix seems to create as much stir as lobbing a leg of beef into a riverfull of piranha. Fortunately the "piranha" value the card not the QSO and maybe this allows them to be controlled.

You have struck gold

KT88s have become cult items with the valve hifi crowd, and those made by MOvalve co. (part of GEC) are esecially sought after, they are now marked with gold lion symbols ! to improve their audible performance ?

In all seriousness, there is a bunch of nuts out there prepared to pay silly prices, if you can stomach dealing with them. KT88's were used in Quad II amps and were also popular as modulators, one pair modulating an 813 to give 100W of classic 1960's AM (150w DC input, the old brit power limit)

Hope this helps

11. Radio Shack high wattage 50, 100 ohm resistors are inductive

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-17 18:15:56 UTC
From: rdewan@casbah.acns.nwu.edu
Message-ID: <1992Mar17.181556.17785@casbah.acns.nwu.edu>
Source record: 292028

I thought I'd pass on this experience to you. I recently
purchased two 100 ohm, 10W resistors from Radio Shack for
building a qrp dummy load. After I put it together with
the two resistors in parallel for a load resistance of 50 ohms,
I hooked it up to my Kenwood 850, turned down the power to 7w
(the lowest it gets on the 850) and to my surprise found the
swr to be 2:1. The dc ohm meter read 50 ohms (or close to it).
So I connected it as an unknown load to my noise bridge and
found the resistors to have 4uH inductance each.

I guess I may have been naive in assuming that the resistors would
be non-inductive. I figured that these were there for the
CBers to test their equipment. I guess I was wrong. In any
case I had some 500 ohm, 10w Sprague Koolohm resistors. I lashed
them together and they are fine.

Do you know of a cheap source for a 10 to 20 watt non inductive
50 ohm resistor?

12. EXTENDED: Middle Latitude Auroral Activity WATCH

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-17 19:43:15 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.700861395@honte>
Source record: 292029
Cross-posted to: sci.astro,sci.geo.meteorology,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

UPDATED: 19:30 UT, 17 MARCH

/\

HIGH RISK PERIOD: 17-18 March
MODERATE RISK PERIOD: 17-18 March (UT days)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: LOW - MODERATE

POTENTIAL LUNAR INTERFERENCE: HIGH

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR - POOR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

SOUTHERN BRITISH COLUMBIA / NORTHERN WASHINGTON STATE TO CENTRAL
MONTANA TO NORTH DAKOTA TO MINNESOTA TO WISCONSIN TO MICHIGAN TO NEW
YORK TO NEW HAMPSHIRE TO SOUTHERN MAINE.

SYNOPSIS...

The disturbance launched by the major flare on 14 March arrived at 09:51
UT on 17 March. This somewhat tardy shock arrival resulted in a slight
intensification of auroral activity over the high latitude regions. However,
conditions remained dormant over the middle latitudes. The main phase of the
disturbance (also somewhat tardy), arrived near 18:30 UT on 17 March and is
in progress at the present time. There is evidence to suggest the main phase
may become moderately energetic over the next 12 to 18 hours.

Auroral activity has intensified over the high and northerly middle
latitude regions. Minor equatorward migration of the auroral oval also
appears to have occurred. Conditions may become visible over the middle
latitude regions over the next 12 to 24 hours. However, the near-full phase
of the moon will hamper attempts to view the activity, particularly from more
southerly locations (for example, south of the U.S./Canada border). For
North America, the activity should remain confined to areas north of the
U.S./Canada border, but may also be visible from the northern tier of the
U.S. states. There is only a slight potential for intensification of auroral
activity to levels sufficient to be observed over widespread middle latitude
regions.

This WATCH will remain active until 18:00 UT on 18 March, unless
conditions change significantly. This WATCH may be upgraded to a warning if

intensification takes place.

** End of Watch **

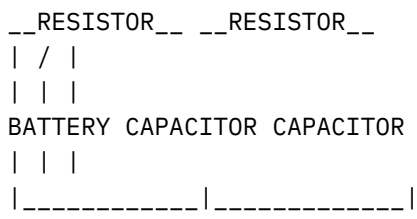
>2. It can't be analyzed with a simple minded model.

How about this:



The resistors are the stray circuit resistance of the wires and capacitors
(not shown on the original diagram.)

(It is not necessary to include electromagnetic radiation. While it's true
that any accelerating charge WILL radiate, the radiation resistance of a
physically small circuit will be much smaller than the stray resistance of
the components.)

>it's up to the individual examiners...

The ARRL VEC's handbook specifically forbids this. They claim that
you're not really copying morse code when you do this. Sounds to me
like a bunch of old grumps - the FCC gives you as much time as you like
to translate/fill/answer so why not let you use shorthand to copy? The
self-same folks who say that writing down the sounds is not a valid way
to pass the test also say that it's OK to use a [quiet] typewriter or
computer that has hard-copy output.. Harumph.

Followups have been redirected to r.r.a.policy

15. Icom W2A mods

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 00:19:56 UTC
From: davidbro@microsoft.com
Message-ID: <1992Mar18.001956.10181@microsoft.com>
Source record: 292032

I've heard a bit of talk concerning mods for the IC W2A, and saw one
that was scanning frequencies the manual doesn't talk about. (It happened
to be the one that I purchased, but the salesman reset it before he
packed it away)

I'm more interested in the sorts of mods that extend receive coverage
rather than out-of-band transmit.

dave
(no call yet, but the ticket should be here any day now, and I'll

18. Re: 2m / 70cm in a Pathfinder

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 04:12:34 UTC
From: alan@km4ba.uucp
Message-ID: <1992Mar18.041234.3685@km4ba.uucp>
Source record: 292034

I use a yaesu 4700 2m/7cm in my 89 pathfinder. It works fine.
Before that I used a Kenwood 721. Hated the radio, but it did
not have any pathfinder related problems.

I mount the control head of the 4700 on the ashtray. I can then remove it
quickly, yet it is firmly mounted.

I am starting to get some ignition noise on weak signals, but this only started
recently, and I know I need to replace my plug wireset.

I mounted two 3/8" NMO mounts on the roof. There is good access under the roll
bar/cieling light area. You will prob want to mount the antennas slightly
forward of where I did to avoid the heavier metal of the roll bar. You can
easily access the area just rearward of the sunroof.

I also made an hf antenna mount that attaches to the swing out tire
carrier. (Out of heavy aluminum angle, and a sturdy 3/8"/24 mount)

Hope this helps!

The FCC only recognizes one "Technician" license. They don't differentiate
between the "no-code" and "Plus" licenses.

>better gain and cost less.

There's nothing wrong with homebrew antennas, I just haven't built one that
out performs the KLM 22C and 40CX that hold up to the weather. The Cushcraft
antennas that I don't recomend suffer from element rotation, but the KLM
through the boom mounting doesn't. Both suffer from a bit of boom sag, but
that's easily cured with a bit of rope. Or better, fill the booms with
foam-in-a-can insulation. That stiffens them right up. You should treat
the fiberglass mast the same way.

Another note. While the KLMs are fairly light, the U100 won't reliably
act as an elevation rotator. You really need the Yaesu 5400 system to
handle such long arrays. For me it handles the two KLMs, a loop yagi,
and a four foot dish.

>Gary is right about mounting the preamp as close as possible to the antennia.
>Even better mount both the preamp and poweramp at the antennia.

This is a quandry. Mounting a power amp at the antenna adds a lot of
unbalanced mass to the boom and requires very heavy DC cabling that
needs to be shielded. It's often better to use hardline instead. This
depends on how cheaply you can get hardline of course. Around here,
CATV companies will give you trunk line roll ends. A compromise would
be to mount the power amp on the tower in a weather proof box. I keep
all expensive active devices, except the preamps, on the ground where
I can disconnect them for lightning protection and keep them out of
the weather.

It's shocking what air pollution and humidity can do to a circuit board.
I've had the copper eaten completely away in a couple of years. Don't
use RTV as a weather seal, the acetic acid in it will corrode copper.
Electricians use a product called self melting rubber to seal electrical
connections. This stuff is great, better than coax seal, and it's cheap
too.

>fingers crossed that I don't get "airbagged" on my first transmission!

Airbags are a serious safety hazard. Several people have been seriously
injured, and at least one child killed, when these things have deployed.
The gas generator uses lead azide which is the same material used in
firearm cartridge primers. It is very sensitive to shock and static
electricity. The gases it produces are also toxic. The bag deploys
very quickly and can deliver a very hard blow. The gases that inflate
the bag are very hot and can give severe burns. One woman has third
degree burns over much of her upper body from an airbag that deployed
in a parking lot. An unrestrained child was killed by an airbag.
These things can deploy in a 3 MPH collision, be careful out there.
Our local paper has been doing a series on the dangers of airbags
following several local incidents of injury caused *by* airbags.

I'd proceed with extreme caution to test the bag's RFI sensitivity.

Passive restraints like the automatic seat belts in VWs and other
cars can also be hazards. In the last three weeks, two women have
been decapitated in accidents by automatic belts here in Atlanta.
I think I'll stick to three point safety harness, or no belts at
all in preference to these dangerous systems.

>
> paul

I agree. I wonder if anyone has managed to crash (in computer terms not
car terms) the engine management systems etc of an adjacent car by
transmitting ? My UNO has a computerised indicator panel, and I can make
it go mad by transmitting more than 10W of HF. This is not a safety
factor, it just tells me that the oil has run out when it hasn't, that the
engine has overheated, all the doors are open, there is no brake fluid and
the car should be serviced immediately. All false. Also the indicator
flashers speed up.

All this plus ignition noise prevents me using HF while mobile, no problems
when stationary and engine off.

This should not happen, but I inherited the car so had no choice. Nowadays
if I want to buy a video, TV or HIFI, I take my handheld into the shop to
test RFI. My Current Panasonic video can operate correctly even with the
rubber duckie antenna pushed into the tape slot and transmitting 2W of RF

on 2M. It objects to 80M but that is hardly surprising. It is possible to make equipment RFI proof, but at a cost. The Green lobby have managed to get manufacturers to take notice, so why can't we ?

>I was able to peak it at 4.8 watts output with just the caps.

While I like the Ramsey, alignment wasn't all that simple in my unit.
I did have to remove one turn on one coil and add one on the other to
get full power. Six watts in my case. It's very easy to get lots of power
out, but harder to get it on your intended frequency. There are several
points in the tuning where the final goes spurious. A spectrum analyser
is highly recomended. Also the receiver tuneup instructions were almost
worthless. I injected a signal at IF and aligned the discriminator, then
worked my way back to the front end. I found that to get 0.2 uv sensitivity
I had to spread L15 at the coax connection to twice it's as shipped
length.

> Performance is pretty good but I too am experiencing intermod
>problems with the receiver that I have seen others report here. People I've
>talked to say the transmitter sounds excellent. My primary use for this radio

>which might help on that score.
> So my question is: is there a good, cheap way to alleviate the
>intermod problem? would an external bandpass filter be of use? Any
>suggestions here would be appreciated.

An external bandpass filter will help. Digi-key has some nice Toko filters
that will serve. The Hamtronics filters are even better. You can also diddle
with the bias of Q16. Increasing the standing current to around 20 mils will
help reduce spurious mixing. This will require adding a separate bias circuit
as the current self bias system is subject to thermal runaway if shifted this
far. An even better fix is to change the preamp transistor to a CATV
power device and run about 100 mils standing current. You would need a
heatsink though.

The biggest gripe with this radio is that the transmitter isn't positively
gated off until the synthesizer is locked. This can allow the radio to
transmit a sweep across the band during TR. This can be done by taking
the lock detect signal from pin 8 of U1 and gating Q12 with it through
an added transistor. The soft gating provided by Q7 is ok if the VCO
locks quickly though.

> One again, overall my experience with this kit has been quite positive
>and I wouldn't hesitate recomending one to anybody. I had only built 1 kit
>in my whole life prior to this one and I was sure i'd screw this one up :) but
>the instructions they provided made it simple.

This *is* a nice kit in these days after Heathkit's demise. It's not
perfect, but little is. Ramsey now has the 222 and 440 versions available.

>
>
>So, flame me now.
>
Also W = .5 LI**2
This is where the solution lies:
If you connect two capacitors, the leads (short or not) actually form an
inductance. So you are building a resonant cirquit.
Resonant cirquits are transferring the energy between .5 CV**2 and .5 LI**2.
In an ideal cirquit this would go on forever, but a real cirquit radiates
energy in the form of heat (Ohmic losses) and in the form of electromagnetic
radiation (Radiation resistance). Oscillations will die out when the
voltages on the two capacitors have become equal, and the voltage across the
wires is 0.

Hope this helpes.
Henk Hessel.

> A monthly column in QST would be the ideal forum for discussing RFI

Amen! This is an area where ARRL/QST could really be of service and break some new ground. I suspect that our problem is not so much that cars cannot handle the EMI, but rather that the manufacturers are just taking the easy way out by saying, "Don't do it" and not discussing it. This is no different than all of the standard medical warnings from your doctor after this or that procedure, to wit, "Don't eat anything, don't sleep, don't wash, don't walk, don't sit, etc." Standard warnings are easier than having to think things through. This is a good opportunity for ARRL to get the manufacturers to think through their designs and *DISCUSS* them with us. Then we can work with them.

34. Homebrew Transmitting Loops

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 13:59:54 UTC
From: mallick@ethiopia.crd.ge.com
Message-ID: <28640@crdgw1.crd.ge.com>
Source record: 292047

I was getting kind of tired of the "perpetual motion machine", so I decided to try a different subject...

Anybody out there try and homebrew a small transmitting loop such as the AEA ISOLoop? The ARRL Antenna Book describes one, and I have read through Ted Hart's book on small loops; my propane torch is being readied to put one together out of copper tubing. I'm curious as to whether any of you netters have tried one of these and can offer some words of wisdom. I still need to acquire a step motor drive and a split stator capacitor for tuning. If you've built one, you might mention what sort of feed system you've employed.

Thanks in advance,

John A. Mallick WA1HNL

35. Icom 229A vs YaesouFT-2400

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 14:00:24 UTC
From: hayward@gargoyle.uchicago.edu
Message-ID: <1992Mar18.140024.16999@midway.uchicago.edu>
Source record: 292049

A friend without netwithout net access is considering both the Icom 229A and the Yaesu FT-2400. He would love to hear people's experince with either. And for those with the 229A, he wonders if you have had any problem with excessive heat build up. He understands this can be a problem, even with the normal drive time QSO.

Thanks

Jim Vienneau writes:
> ...a problem with the FT-747 HF rig where is output is unstable over about 12:00 on the drive knob?... ALC problem?

I had a similar problem with an older Yaesu solid state rig, the FT-707. The problem did indeed turn out to be the ALC; the level was set too high. I followed the ALC alignment procedure, which consisted simple of adjusting an internal pot to limit output on any band to 110 watts (some previous owner had cranked it up to 150 watts on 80 meters). This solved the problem completely. A similar fix, using the right power setting for you rig, might work in your case. Good luck.

However, the engine control module is usually located inside the car,
often near the glove compartment or on the firewall. So, in addition to
RFing the engine (and the engine sensors), you want to RF around under
and/or behind the dash.

Yes. Radio Shack sells a light duty (20W continuous, 60W peak)
RF dummy load. It is a PL-259 with a big, black, finned heat sink
hanging off. It is actually designed for what you are trying to do.

[paramedic mode on]
While I agree with you about airbags - though my complaint with them is more that people are lulled by them into a false sense of security and don't take other safety precautions like wearing their seat belts - I don't mind automatic seat belts, *as long as it's a three-point system*. An automatic shoulder belt with no lap belt in use can be very dangerous, and I suspect both decapitations you mention were caused by just that.

Moral: Wear *all* of your seat belts any time you move a vehicle.
[paramedic mode off]
This one's drifted a *long* way from ham radio; replies by email, please.

If I remember correctly, the Koolohms come in two varieties.
The 10KT is wound normally and therefore inductive. The
10NIT is supposed to be wound so the inductance of one
winding is cancelled by another. Any wirewound resistor
will have some inductance, but I have had good results
with the NIT version.

High power resistors are normally wire-wound; non-inductive ones are much rarer, and certainly not likely to be found at R.S.

Even carbon film resistors are slightly inductive since they have a spiral cut in the film, but by comparison to wire-wound resistors work fine. The easiest way to get 10-20 watt capacity is to put 10 to 40 regular carbon film resistors in parallel. Alternatively, you can get by with a lot fewer if you dunk them in water. (For some reason, metal film resistors don't seem to like this, but I haven't had problems with carbon film ones. Even so, they probably won't last years -- but at the cost of just a few of them, who cares?) My father used to run 100 watts into a pair of 100 ohm 2 watt carbon film resistors in a jar of water, no problem.

Most of the Ford manufactured police, taxi, and other emergency services vehicled which I have seen, and all (police cars) which I have operated are LTD or Crown Victorias. The Tarus is around though. My last one had a high power public safety radio (155-156 MHz) and a 25 watt 2mtr. radio with no problems. My Toyota had so many problems, that I would be hard pressed to determine which were related to using the HT in it and which were just there!

This thread looks like the plot for the next murder mystery novel:
Man hated by many drives off cliff for no apparent reason, looks
like mechanical failure of driver error. In the end, it turns out
that the villian disabled the victim's vehicle with a high power
RF blast...

For the record: I operate UHF/VHF (25 W max) in a 1988 Toyota
Camry and a 1989 Toyota Pickup. There was never any problem,
even with cruise control engaged, or the time I was 25 W with the
antenna INSIDE the Camry (the wife would not let me stick the
mag-mount on HER car).

A co-worker put a Kenwood dual-band in his 1991 Ford Explorer, and
had a small problem - The rear window wiper would activate when he
keyed the mic. He fixed the problem by re-routing cable and
possibly using higher quality feed line(?). He hasn't had
any problems since...

Radio Shack now has a low-power dummy load, which I think will take 10W
continuous (it is rated for a maximum of something like 100 watts, at
a really low duty cycle). Look over by the CB stuff.

I don't know about dunking them in water, but Digikey sells metal *oxide* film
resistors at 3W for 1.98/5, and 2W at .86/5. The catalog claims they are a
"noninductive" design.

50. was, getting "into HAM", now, misuse of language

I was amused to hear a reading of a story set in one of the California internment camps for Japanese during WWII, with a mention of listening to news on a "transistor" that her father had built of scrounged materials in the camp.

When transistor radios first came out, people in England would complain of all the "teenagers with their noisy transistors" (they should have cooled their receivers), and you can still go and "buy a vacuum" even though it shouldn't cost anything at all to do that. You can "go and eat Chinese" and so on.

Thanks for the replies, sorry it wasn't a very deep topic, and y'all continue to enjoy HAM, folks!

One way to protect the bottom of 10 meters is to allow high-speed fully automatic packet in that region of the band.

(Do not send questions about the hamfest to this ID. See bottom of
announcement for contact.)

!!!!!!!!!!!!! H A M F E S T ! !!!!!!!!!!!!!!

The Mt. Beacon Amateur Radio Club is sponsoring it's annual Winter Hamfest

WHEN: Sunday, March 22, 1992. Doors open for general admission
at 8AM and for Vendors at 6AM. Hamfest will last until 1PM.

WHERE: Arlington Sr. High School, North Campus, located 1/4 mile
west of the Taconic State Parkway on Rte 55 (Take TSP
North from Interstate 84). Poughkeepsie/Lagrange, NY.
Talk-In on 146.97 MHz (-).

PRICES: Hams and Computer/Electronics Hobbyists: $4.00
Tailgating (Weather Permitting): $5.00 (incl. 1 Free Admission)
Tables: Prepaid: $8.00 (send to address below), $10.00 at gate.
(1 free admission, 1 table)
Prepaid Reservations: Make checks payable to Mt. Beacon ARC
Non-Ham Spouses and Kids - FREE!

FEATURES: - Large Indoor Location - Free Parking
- Call Re: FCC exams - Hot Food and Beverages
- Amateur Radio Video Shows - ARRL-Approved

FOR MORE INFORMATION AND FOR PREPAID RESERVATIONS, CONTACT:
Ken Akasofu, KL7JCQ
316 Titusville Rd, Apt 4
Poughkeepsie, NY 12603-2944

54. QSL cards

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 18:34:37 UTC
From: oo7@ut-emx.uucp
Message-ID: <68620@ut-emx.uucp>
Source record: 292067

ron@pilot.njin.net (Ron) gives generally sound advice
about getting QSL cards:

>Domestic: Get the address of the station you worked and mail him
>a card. If you want a card, it pays now to ask specifically because
>people don't seem to send them out as a matter of course now. You
>can expect return domestic cards in the same way.

If you really want the card from a domestic station, I think you should
send an SASE with your card, and not rely on the other person to send
his card back to you using his own postage. If you are a fairly new
ham and excited about working your first Californian, don't assume that
the Californian is equally excited about working her 1,589th Texan.

If you are just collecting cards for WAS and you want a W6 card, it might
indeed make sense to send lots of cards direct as postcards (19c?) rather
than first class with an SASE (total 58c), as perhaps 1 ham in 3 will send
you his card without the SASE, but if it's your last state or something
important to you, I'd send the SASE. It takes a cruel person to ignore one
(not that there aren't some out there).

Since I'm not in a rare state or county, and work few Ws outside contests,
I get very few W cards and don't mind replying direct to cards that come as
postcards, but that's mainly cos I'm a Swell Guy. If I lived in one of the
rarer states I think I'd soon get tired of sending out cards at my own
expense. 100 postcard stamps = $19...

Source record: 292065

My brother's 84 Celica (the old rear-drive model) survives 100 watts on 2 meters with no problems, but then the only 'electronics' on it are the ignition amplifier and the alternator regulator.
My father's Volvo 480 Turbo (91 model) has RF get into the engine management system if i run more than about 60 watts. Engine is OK under light throttle, but if the throttle is further open (say about 5500RPM in 3rd gear) then keying the mic. produces a momentary glitch in power delivery (lasts about 1/2 second). This results in terror to both the driver and passenger(s) if it happens half way through passing a truck......

My 73 Reliant Scimitar has no problems at all despite being totally made from RF-transparent fiberglass. The only problem i had was taking out the front-end of the FM broadcast radio when the antenna diplexer filled up with water. Air-spaced capacitors cease to act as capacitors when used with rusty water as the dielectric.... :-)

>far-fetched right now, but the problem is increasing at such a rapid pace
>that what sounds extreme today may be reality in the near future.

Sorry, but this is a "pie-in-the-sky" belief. Just as the War on Drugs/Truth is not keeping drugs away from those that desire them, and the various areas of the country that have strict gun control laws are not keeping guns out of the hands of those that want them - banning radio gear is not going to keep it out of the hands of those that desire it. The only people this would affect are the law abiding people - the lawbreakers are just going to ignore the law and get the equipment anyway. All we need is another batch of unenforceable laws that will create yet another black market for a banned product.

Source record: 291999

My experience with the Ramsey 2M kit pretty much matches Gary's. However, mine is the older version, the FTR-146 if I remember correctly. From the description in the catalog the FX series is quite a bit different. Hopefully they've corrected some of the problem areas.

Has anyone out there built the 220 or 440 MHz versions of the FX series? The 440 model looks interesting to me but I'd sure like to hear from someone who's build and used one before I spend the $$.

Source record: 291882

In article <kscrjmINN84q@jethro.Corp.Sun.COM> todd.jonz@1.com writes:

> o If my rig will only tune in 5 kHz steps, should I even attempt to
> compensate for Doppler?

plus a lot of other questions I'd also like to know the answers to....
if anyone's e-mailing, please cc me at jim@n5ial.chi.il.us.

and here's one more: I live in a high-rise...meaning no outside antennas,
due to the fact that I don't have a place to put them. so, we're talking
vertical (or, if I move it, horizontal) 1/4 wave....should I just use this?
or do I need to try to work on building another antenna REALLY fast?

'nother question --- since there is some packet activity on 144.95 (this
is one of the main frequencies here in chicago), has anyone figured out how
to avoid interference? I suspect that when I key down, the digis aren't
going to ignore me because I'm working the shuttle, and likewise, if the
digis are strong enough to be heard on the shuttle, I doubt if their sigs
are just going to understand that they're not supposed to be there.

I hope this isn't something that's been beaten/flamed to death...but it
just seems like a potential problem for both ends. and, I'd guess that
the other uplink frequencies might well have packet in some areas, too.

thanks,

I have a somewhat different experience. I qsl every ARS that I contact.
I just send my qsl card with a 19c stamp on it. I get a return
qsl from about 1/2 to 3/4 stations to which I send a card. I
wonder if ragchewing in cw is a more bonding experience? ;-) :-)

Some of my more memorable cards:
- a hand drawn one from Colorado
- two cards from QCWA members who had been licencensed abt 70 yrs ago
- a hand made card - photocopy stuck on a cardboard, cut out to 3 1/2 by 5
- a UNICEF Panda card with a nice note
- numerous letters, some with pictures, clippings and so on.

In some cases, the qso does not make as much of an impression as
the qsl cards do. I look forward to receiving QSL cards, even the
the 1,589 th card from Texas. :) :)

For DX contacts, I am trying to use the Bureau. Haven't received
any yet. But then I've not been in this for long.

63. Re: Motorola DSP demo board

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 20:14:13 UTC
From: jessonj@nic.cerf.net
Message-ID: <1602@nic.cerf.net>
Source record: 292070

OK, thanks for the kind comments! Here is the repost you requested:

(By the way, after working with the system awhile, I am still very pleased by the purchase but found the internal A/D converter to be quite slow and useful for low sampling rates)...

Well, after reading about the new Motorola MC68HC16Z1 microcontroller with DSP, I finally purchased their evaluation board. Motorola was hyping the $168.16 evaluation board was worth $500.00 in parts! How could I refuse such a deal? The ad went on to say if I finished one of the tutorial projects (all parts included), I would receive a $68.16 cash rebate from Motorola - total cash outlay of $100.00.

What kind of DSP system did I get for minimal dollars? I was REALLY surprised when I opened the large boxes. Two boxes with the following hardware and software:

- Assembled and Tested Evaluation Board with MC68HC16, Monitor ROM, and RS232 Serial Port Hardware

- Secondary LED Display Board for the DSP Tutorial (Frequency Analyzer)

- MSDOS Cross Assembler to MC68HC16 Code

- Small C Compiler (Minimal Freeware, you are expected to purchase the full-size C Compiler if you like the "trial" size)

- Books, MANY books on the IC, DSP fundamentals, and Controller Specifics

The 68HC16 is interesting as it is upwardly code compatible with the MC68HC11 series and is Motorola's high speed 16 bit control unit. Features:

- 16 Bit Architecture
- Digital Signal Processing Capability
- 8 Channel 10-Bit Analog to Digital Converter
- Two Megabyte Address Space
- Watchdog Timer, Clock Monitor, and Bus Monitor
- Two 16 Bit Counters with Seven Stage Prescaler
- Three Input Capture Channels
- Standby Ram, 1024 Byte Static Ram

Motorola is clever, allowing engineers to learn DSP by a self-study low cost evaluation and tutorial package. Hopefully, the trained person will be in a position to specify an understood chip. I was looking for a self-study package to learn DSP (having hardware, software, and building a workable frequency analyzer) and this system accomplishes this. The DSP functions is not as powerful as the 56000 dedicated DSP chip, but the completeness (10 A/D converter, timer, etc.) solves many

midrange DSP functions with a minimum of external components. A multiply and accumulate unit provides the capability to multiply signed 16 bit numbers and store the 32 bit result in a 36 bit accumulator. I think this system would be an excellent foundation for a graduate DSP course.

Since Motorola is building and selling the evaluation board, a Motorola dealer must be contacted (the $168.16 offer ends March 20th, 1992). My Motorola distributor is willing to sell the systems to the net readers for $168.16 and will ship for $10.00. Don't forget if you complete the frequency analyzer tutorial, a $68.16 rebate will be received if the paperwork is completed. My Motorola Distributor - Future Electronics, 3150 West Higgins Rd, Suite 160, Hoffman Estates, IL, 60195, Phone (708) 882-1255 Sue or Vince Vitucci

Note: I am NOT affiliated in any way with Future Electronics, just passing on a new introductory DSP system to my net friends.

Message-ID: <1992Mar18.205743.19131@cbfsb.cb.att.com>
Source record: 291981

I am planning to install a Cushcraft A3WS WARC band 3 element yagi with the optional 30M driven element. This antenna will be about 7 feet above a KLM KT-34XA and 6 feet below a KLM 2 element 40M yagi. The XA and the 40M yagi are at right angles because of mechanical considerations and convienience when tipping the tower over. There is currently no detectable interaction (changing SWR's) between the two yagis. Does anyone have a combo similar to this and tried adding the WARC yagi also. Your experiences with orientations and interactions please...

Thanks, and look out WARC bands...

There is a fix for this problem already.

The problem is that the computer in the car is not protected in any
way against RF.
The proposed solution is to provide a plug kit which provides some
torriadal protection, and plugs right into the existing connectors on
the computer. I think I still have the message on my Fido-net
system, I'll take a look when I get home.

From: njohnson@sysad.cnde.iastate.edu
Message-ID: <1992Mar18.212358.16251@news.iastate.edu>
Source record: 292077

I've just recently passed my No-code Technician exam, and I'm planning to
try for a General (possibly Advanced) license in a about 2 months.

While I'm waiting for my call sign to arrive (and learning Code!), I'm beginning
to look for some equipment. Could I get some recomendations on what to get for a
"starter" station? I would like to keep it as inexpensive as possible, but quality
is also important. I'd like to get a decent receiver first, so that I can get
on-air code practice. I can worry about a transmitter or transciever later (after I
get my call sign). Eventually, I'd like to get into packet, a little DX, and some
hand-held stuff.

Also, since I live in an apartment, I'm looking for ideas on how to install an antenna
that will work okay, but not cause any problems with my landlord.
I'm on the third floor of the building and have a deck facing westward.

Thanks in advance.

Yes Al, but consider that "transistor" is a colloquial term for a
broadcast receiver; and that during the early 30's many a young man
from northern Illinois would melt a mineral from Galena, Illinois
into a bottle cap with some laxitave from the drug store (sulfur) and
spend hours looking for the "hot spot"....... solid state receiver
way before 1949........ hummmmmm

>Do you want to get STRAIGHT A'S in college? If so, E-mail your
>address to me so I can send you information.

I don't care about the straight A's - i want to know how you are going
to make it retroactive to 1978....(talk about perpetual motion machines..)

My solution for this would be to win the lotto and then buy a college
president or registrar. too tacky? i guess i'll settle for just buying
a county commissioner or city manager if i win <sigh>.

The real solution would be to study more, party less.

(thought - jstreidl is really trying to get the most e-mail ever sent to
anyone in the world sent to him so he can be in Guinness before his brain
cloud gets any worse - pass it on and remember to make lots of fuzzy xeroxes
and bad mimeographs of his posting and stick it under all the windshield
wipers of parked cars you can find everywhere. And remember to watch the
E-mail telethon hosted by Craig Shergold on April 1.)

Semi-funny story. I was sitting at a traffic light when a new Buick pulled up beside me. When I tansmitted, 45 watts UHF, the Buick's engine died. I didn't realize at first it was me. Then I transmitted again, and his engine died again. (heh heh) So now I'm ready for him. When the light changed, I let him start into the intersection, then I transmitted again. Killed the Buick dead. I left him grinding the starter and cursing the dealer that sold him that lemon. Wait until he tries to take it back, and it won't die. (heh heh)

>appreciate some information.

>Thanks very much.

>Sean N3LQN

Sean, if you can get your hands on one of those Uniden MR8100 scanners,
go right ahead, because one of my friends just bought one recently and he asked
if I could program it for him.
I found out that the scanner is very user friendly, especially when programming
it via it's Software Program:
☐of☐ It allows you to enter a title for each frequency along with the
frequency.
☐of☐ There are 10 banks of 10 channels and each bank can be titled, so that
you have 100 channels to play with.
☐of☐ The unit itself is designed for mobile use, so the "Keyboard" is very
accessable to even the large-handed person and easy to read and the LCD display
itself is large enough to read from a good distance.
☐of☐ Each bank is user selectable from the keyboard from no bank, to all ten
banks with one Priority channel that you can select.
☐of☐ It has a variable contrast adjustment knob on the front.
☐of☐ It has a variable backlight control knob on the front.
☐of☐ The configuration can be uploaded or downloaded via PC Software Program
and saved under your file description.
☐of☐ The PC Software Program is Basic oriented.
☐of☐ The MR8100 is designed for Professionals in mind, so the quality and
ease of operation is very evident from the time it was handed to me to the time
I reluctantly handed it back to my friend, because I learned how to use it and
made multiple Customized frequency files and saved the files on the Back-up
diskette for him to use in about 6 hours.
☐of☐ The unit is easy to program via "Keyboard" also, but it doesn't allow
you to title the frequency that way.
☐of☐ The HYPERSCAN mode is indeed very very fast.
☐of☐ The BNC connector for the antenna is on a in-line cable, so you need a

remote-mounted antenna of some kind- it's definitely not picky. A rubber-duck antenna from my Yaesu FT-470 performed very nicely.
□of□ All necessary harnesses and mounting hardware comes with the unit, including the cable to connect the MR8100 to your PC's EIA port.

If you think I'm biased, I am. I wish I had the money to buy one myself !
I hope I answered your question Sean.

75. Bearcat XLT-250 for sale ($75)

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 22:51:31 UTC
From: bezenek@plains.NoDak.edu
Message-ID: <16063@plains.NoDak.edu>
Source record: 291987
Cross-posted to: rec.radio.amateur.misc,alt.radio.scanner

I have a Bearcat XLT-250 for sale.

It is a "desktop" scanner with 50 channels and an internal
speaker. It is not in "new" condition and is not as sensitive as newer
equipment, but it is a good scanner for new listeners or someone who
needs one for a specific purpose.

I am asking $75 plus shipping. I think that is a good price.

76. Hamcom 2.0 RTTY questions

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-18 22:53:39 UTC
From: kdk@radio.nusc.navy.MIL
Message-ID: <22@radio.nusc.navy.mil>
Source record: 291985

I recently pulled the Hamcom RTTY/CW/ASCII program off the net, and have had some problems getting it to work (other than sporadically) in rtty receive mode. I'm using the simple interface described in the documentation.

Is anyone using this program that can give me some hints? I've tried various receiver filters/signal levels/etc but haven't had much luck.

One other question... there is a menu entry for "external converter". I assume this allows use of an external demodulator instead of using the internal software demodulator? Do you hook the external denodulator to the serial port? The manual doesn't document this at all.

Any help will be appreciated.

Source record: 291992

Best way to get QSL cards from domestic stations is to work new novices/technicians. As a novice, I QSL'ed 100% (without SASE), and my records show about 90% of the other novices sent cards back. The response rate on the higher license classes was pretty poor. (By the way, this was back when novices had distinctive WN calls...)

As for sending SASE's, I've observed just slightly better than a 50% return rate, so I would save sending SASE's for those folks who you really want the card (i.e. for an award).

I QSL 100%, SASE or not.

Oops... I hadn't noticed I wasn't supposed to do this... but I've got
a related problem maybe someone can help with...

I've been using my ICOM W2A
with a larsen magmount, plus the recommended ICOM cigarette lighter
attachment (don't remember the model number). The radio works fine
on 2Meters, but doesn't work worth beans on 440 when the engine is
running. If I stop the engine (or disconnect the AC adapter), the
radio works fine on both bands. I haven't tried measuring power or
SWR to the antenna since I determined this was a problem.

I get the same symptom in my 1985 Tercel Wagon, and in my 1988 4-Runner.

Any ideas,

Bill Parrish (KM6KV)

86. In case you haven't flamed this user yet (was: straight A's)

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-19 03:38:39 UTC
From: ikluft@uts.amdahl.com
Message-ID: <0eG=022ea62U00@amdahl.uts.amdahl.com>
Source record: 291998
Cross-posted to: news.groups,rec.aviation,rec.radio.amateur.misc

Has everyone seen it? The "straight A's" article in every busy newsgroup
under rec.*, comp.*, and misc.*... and maybe more, I stopped looking after
that and sent e-mail to the system administrator at the originating site.
Other readers may want to consider doing the same (in e-mail - that idiot
already wasted enough net.bandwidth.) Here's what I sent:

--e-mail reply follows--
To: root@cmcvx1.claremont.edu
Subject: One of your users needs some Netiquette lessons
Organization: Amdahl Corporation, Systems Software, Sunnyvale CA

In article <1992Mar18.045437.1@cmcvx1.claremont.edu> jstreidl@cmcvx1.claremont.edu writes:
>Subject: straight A's
>Newsgroups: rec.photo,rec.radio.amateur.misc,rec.radio.shortwave
>
>Do you want to get STRAIGHT A'S in college? If so, E-mail your
>address to me so I can send you information.
>
>jstreidl@cmcvx1.claremont.edu

I have seen the preceding message in a large number of public newsgroups. It
seems that the user posted the same message many times, cross-posting to 3 or
4 busy newsgroups per article. There are several problems in this action
which you are probably aware of but I hope you will explain to the user...
1) In most cases, the content of the article was irrelevant to the subject of
the newsgroup in which it was posted (i.e. it had no place in rec.aviation,
rec.radio.amateur.misc, misc.emerg-services, comp.dsp, comp.editors, and
most others where my search found it.)
2) The idea of multiple copies of the same message is wasteful of network
bandwidth - something that is already in short supply without this.
3) The user obviously does not understand the concept that each newsgroup is
already a broadcast medium. In order to reach a wide audience, one only
needs to find the appropriate newsgroup for the topic. There is no need
to post in every newsgroup to achieve a broadcast.
4) If this message is intended to sell something, as I suspect it is, it is
strictly in violation of the no-commercial-use rules of UseNet and,
especially, the NSF Net. If for no other reason than this, you should
educate your user about the proper use of the Net because it means that
your site is in violation of these rules.

Thanks for your cooperation. I'm sure you'll see to it that this doesn't
happen again.
--end of e-mail---

If you send a similar message, make it original so the sysadmin will take it seriously. (I.e. don't just plagiarize my message - that wouldn't have the intended effect.)

>address to me so I can send you information.

Yes, I do. Especially since every time I've taken a degree I didn't
get straight A's. I always thought it would have been nice to give myself
some when I was a professor, but it turns out like most places, the
schools that I taught at wouldn't allow faculty members to register
for course credit in their own department. Curses. Foiled again. Oh
well, I guess I'll just have to go listen to the BBC to console myself...

Later,
Andrew Mullhaupt

Our ham radio club, MADRAS (Maryland Apple Dumpling Radio Amateur Society, Inc.) is sponsoring a special event station: "Source of the Potomac" that will transmit from Garrett County, Maryland and from Mineral and Preston Counties, West Virginia.

Date: April 4-5, 1992
The club intends to operate all HF bands
The club will use the call: WK3X

I hope we can help out county hunters everywhere. The club intends to set up on April 3, be on the air all of April 4 and most of the day of April 5. This is in the Eastern time zone of the USA. The site is on Back Bone Mountain. For more information contact me by email or the club president, Larry, N3GKZ at (301)984-6112.

>should look for that will make it easier to use? What is the difference
>between DTMF paging/coded squelch and CTCSS encode/decode? Isn't CTCSS
>encode/decode just a subset of DTMF paging/coded squelch?

All I'll say on which HT is that I own the Yaesu FT470, covet an Alinco
580, and know I can count on a IC2AT.

Now as to DTMF and CTCSS, DTMF stands for Dual Tone Multi Frequency and
is the common set of tones used on push button telephones. These are used
in radio to access autopatches and other control functions including three
digit digital paging. CTCSS stands for Continous Tone Coded Squelch System
and is commonly referred to under the trade names PL and CG for Private
Line and Channel Guard respectively. It is a series of subaudible tones
that are used for access to some repeaters and to control the squelch
of some receivers. You choose one of several tones from a range of
approximately 71 Hz to 160 Hz and transmit it continously while you
talk. A receiver set to the matching tone will open it's squelch only
on recept of the proper tone, and only for as long as the tone is
present. This is a form of *access control* and can be very valuable
as a way to monitor a busy channel for only certain stations, or as
a way to reduce interference to a repeater system.

/\

SOLAR TERRESTRIAL BULLETIN

19 March, 1992

SPECIAL NEW SERVICES NOW AVAILABLE

/\

SPECIAL NEW SERVICES NOW AVAILABLE THROUGH ANONYMOUS FTP

There are several special new services which are being implemented.
They are now available through anonymous FTP from: xi.uleth.ca (IP number
142.66.3.29). They are outlined below:

- Selected professional solar GIF images will be made available in the
directory "pub/solar/Images". Read the file "00-index.txt" for
descriptions of the files in this directory. For information
on obtaining regular dedicated daily imagery (as much as 2 to 4
megabytes worth of imagery per day), contact: Oler@Rho.Uleth.CA, or:
COler@Solar.Stanford.Edu.

- Synoptic solar magnetogram and Helium 10830A maps for various
Carrington rotation periods, as well as special analytic synoptic
map imagery will be made available in the directory:
"pub/solar/Synoptic". The archive in this directory will be updated
over time.

- Daily high-resolution X-ray plots from the GOES-6 and GOES-7
geosynchronous spacecraft will be made available regularly in the
directory: "pub/solar/Xrays". Consult the file "00-index.txt" for
a description of the images contained in that directory. Within
approximately 3 to 6 hours following major flare events, corresponding
x-ray plot images of the events will be made available in this
directory.

All images will be in the standard GIF image format. GIF image viewing
software will therefore be required to view the data in these directories.
Fortunately, such software is readily available from numerous anonymous FTP
sites for almost every type of computer system used today. Good anonymous
FTP sites for this type of software include: wsmr-simtel20.army.mil or its
mirroring counterparts such as: wuarchive.wustl.edu, or: nic.funet.fi.

Questions or comments regarding these or other services should be directed
to: Oler@Rho.Uleth.CA, or: COler@Solar.Stanford.Edu.

Diplexers become desirable if you want to get the best out of your mixers.

you could use frequency diplexers or circulators depending on frequency range. This is worthwhile as mixers generate rather a lot of unwanted terms. you do not want these to go into your IF, Neither do you want them to reflect back into the mixer.

Uh now I've jumped into the middle of things, but diplexers are very useful at HF, but mostly to help mixers.

I had to do a serious analysis of that old old 2 capacitor trick a long time ago, It wasn't too difficult.

* The simple calculation is quite right about the final voltage

* The CIRCUIT has lost energy

* The missing energy must be somewhere else

* The calculated energy loss went into resistive losses, switch arcing and radiated fields.

* If we built one out of perfect conductors, we would eliminate the resistive losses, and the size,shape,time of the transient would change to put that same old amount of lost energy into arcing and fields.

* If we built one with perfect conductors and a perfect switch, then the transient currents and voltages would be such as to radiate that same old amount of energy

* We cannot build one that cannot radiate, it takes a finite physical size of capacitor to hold a non-zero amount of energy, our circuit cannot be of zero size, the currents and voltages must create unavoidable fields.

QED?

94. activity at KOS, LEROS, KARINTHOS (SV5) ??

Hello HAMs,
does anyone of you have any experience with HAM RADIO at one of the following Greek Islands in the DODECANESOS: Kos, Leros, Karynthos ???
I'm planning to go there in JULY (holiday), and if there's any activity, I'll take my portable (2/70).

Please write me back at ramon@blade.stack.urc.tue.nl

Hi Folks,

Does anyone have a list or other info about where AMTOR Mailboxes
live on HF ? Details of their capabilities would also be useful
especially those running gateways to AX.25 Packet.

TIA & 73,

Mike (G6DHU)

In a previous article, gary@ke4zv.uucp (Gary Coffman) says:

>CTCSS stands for Continous Tone Coded Squelch System
>and is commonly referred to under the trade names PL and CG for Private
>Line and Channel Guard respectively. It is a series of subaudible tones
>that are used for access to some repeaters and to control the squelch
>of some receivers. You choose one of several tones from a range of
>approximately 71 Hz to 160 Hz and transmit it continously while you
>talk.

It took me a long time, when I was first introduced to VHF-FM in the 70s, to figure out why these tones were "subaudible". In case anyone else is confused--it's simply that they're below the passband of the audio filter on the rig (and probably below the cutoff of the speaker, too). They're perfectly good audio tones, they're just removed from your attention.

BTW, my wife and I enjoy our TH-77a's. They're complex but work very well.

97. Re: Operation in cars, Toyota forbids

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-19 14:55:58 UTC
From: waco@cbnewse.cb.att.com
Message-ID: <1992Mar19.145558.2849@cbnewse.cb.att.com>
Source record: 292013

The prohibition of radio installation in Toyotas must be somewhat recent.
I have pretty much read all of the manual for my 1988 Supra, which has
quite a bit of electronics in it, and found no prohibition on installation
of radios. I have never had a problem with using my ICOM mobile, even at 40W.
The only problem I ever had with RFI in a car was with a 1974 Volvo 174E
when keying the mike would turn off the fuel injection. Replacing a faulty
control unit fixed it. For 1975 and later, Bosch provided RF sheilding for
the unit.

Rules of thumb for mobile installation:

1. Use good quality coax.

2. Wire radio directly to battery, or terminals provided near battery
in some cars. Fuse both + and - lines.

3. Run power leads and coax as far away from elelctronic components as
possible.

I violated rule number 2 with no ill effects. I only ran the + lead to
the batter and ran the ground to a bolt on the transmission hump right next
to where the radio is installed. I also have never fused the ground lead
in a mobile installation.

I have had a failure of an ABS sensor for one wheel. It was replaced under
warranty, no problem. The dealership has never made any comments, pro or con,
about the radio installation in the car. I have never hit the brakes hard
enough to activate the ABS when transmitting, but believe the system would
operate normally. A few years ago I did read about some Buick models having
problems with RFI affecting braking.

A ham I know had a similar problem with his Porsche as with my '74 Volvo
a number of years ago. After he fixed his car, he would key his mike whenever
he happened to be next to another Porshce at a stoplight. He claims it was
fun to watch the other driver's face.

Hey Gang, we are getting older by the minute.

the original posting, referencing "transistor" was probably referring to
an old trick that american soldiers used during WWII while imprisioned in
POW camps and for that matter, any POWs anywhere.

you can use a razor blade with a pencil lead to create a diode, by placing
the lead gently against the sharp edge of the blade and adjusting the pressure.
this gives one the critical component for a "crystal radio" for AM (amplitude
modulation). by scrounging wire to form the tuning coil and using aluminum
foil from gum wrappers, etc. to form a capacitor, POW's were able to make
AM receivers for listening to news broadcasts, etc. the most difficult part
to find was probably the earphone or a substitute for same.

how many people born withing the last 20 years have ever built a crystal radio receiver? i'll bet it isn't a very large percentage.

just my $0.02 worth.

Orange County uses trunked 800 MHz frequencies for all Fire Departments within the county. If he has an old Police Call book, it lists the old Lo VHF frequencies, which have been abandoned for more than 2 years.

Two items of interest:
1. I have had good luck with their service. I shorted out the 12V aux. output (this actually fried a trace). Talked to the tech, sent it in, was back FB in about a week. The tech was great and told me how to do it myself (I opened it up and said forget it !!).

2. I use the rig mobile and have discovered one problem. This is a high SWR and no out put some times. I fought this for about a year and still could not figure it out. I finally stumbled onto the soloution:
This only happened when my keyer was connected to the rig, but not connected to power. In other words, I have the keyer plugged into the back of the rig - but I have the keyer power un plugged. This causes the problem !!

Been happy with the rig and with the service. It's great to get the 500 Hz CW filter as a standard option, and this is the main feature that caused me to buy the 747

* Using the simple interface it worked fine for me both on a PC using a 386 Motherboard by Micronics and also on a 386SX Toshiba 3100 laptop.
* It says somewhere in the documentation that an external Modem must be connected through the simple interface.
* The simple interface has worked reliably on both CW and RTTY on a homebrewed HF station, I used an audio stepup transformer to transform up from 3 ohms with better immunity to noise, but it all worked from the word go.

Global comment: I'll leave the issue of "what are we testing for anyway?"
for later.

I received some corrections in the mail, so I correct my posting:

abeals@catnip.berkeley.ca.us (Andrew Scott Beals) writes:

.gleason@mwk.uucp writes:

.>In article <9203122043.AA14275@ucsd.edu>, FLEM%athena@leia.polaroid.COM (Skip Flem, NT1G
565TS-7 PTN 221-4291) writes:
.>>
.>> The Lo-Tech method of that is to copy the dots and dashes on the

.> Just took my 5 wpm code test here in Houston. I had jokingly mentioned
.>that I was considering doing this during the test - the examiners informed
.>the group of us that they wouldn't pass anyone trying this tactic...guess
.>it's up to the individual examiners...

.The ARRL VEC's handbook specifically forbids this. They claim that
.you're not really copying morse code when you do this.

I do not have a copy of their handbook, but I did look up this specific
point last month. I ask "So what are you copying if not the code
itself?". It certainly isn't a good way to operate.

.Sounds to me
.like a bunch of old grumps - the FCC gives you as much time as you like
.to translate/fill/answer so why not let you use shorthand to copy?

I am told that the FCC, back when they gave the exams before the "or
answer 10 questions", basically grabbed your copy sheet once you were
done. When they introduced the 10 questions part, they gave you a
small amount of time to fill in the answers.

In the ARRL VEC sponsored exam sessions I've been to, examinees basically
have as much time as they want in order to correct/fill/answer when they
take their exams. Given this, and that it does not test for operating
skill, what does it matter how you do it, so long as it is a man and the
supplied headphones?

.The
.self-same folks who say that writing down the sounds is not a valid way
.to pass the test also say that it's OK to use a [quiet] typewriter or
.computer that has hard-copy output.. Harumph.

Are you going to have a typewriter or computer that's working after the big quake and you're copying code coming out of a 4 tube reciever that you've put together yourself out of old Tektronix oscilliscope parts?

If I write 30 barely legible words per minute when writing a familiar phrase from memory, how many words per minute could I write when copying someone else's words? If this is less than 20WPM, do I have a physical handicap that prevents me from ever passing the tests?

>the serial port? The manual doesn't document this at all.

There actually is quite a bit of documentation on Hamcomm 2.0. Print up
the files "changes," "hc.cfg"(don't do hc-d.cfg unless you read German),
"hc.doc," "readme," and "readit.txt." This will tell you everything
you need to know.

The external converter setting is included in this info. If you use one,
you must still feed in the audio into those pins used already so the software
will know a signal is coming in.

I have absolutely no problem decoding weak signals with my Hamcomm. I've
heard complaints about sensitivity but I find mine to be more sensitive than
a n MFJ-1228 by orders of magnitude.

Some of the problems I've seen with other people's setups are the following:

1. Using an unshielded box and cables. My Compudyne 286 isn't noisy, but
my monitor is almost as noisy as a VIC-20. Once everything was shielded,
it was OK.

2. Using an unshielded, not so hot receiver. Two friends of mine were
using a DX-440 and it was picking up LOTS of noise from the computer.
One of them started using an old, beat up, shielded Collins 51J1, and
there was no problem.

3. Having the antenna too close to the computer. I hung a long wire
out the window, but the noise was too much. I now use a vertical about 30
feet away and there is no problem except on one spot on 10 meters. Again,
the monitor is the problem, not the computer.

4. Some computers can't implement the AFC function. Mine doesn't, but an
IBM can. I don't use it.
Please email me on any performance characteristics or problems with HC 2.0.
I am compiling a data base. I will say that I am having a ball with HC
and I think that with a little care one heck of a RTTY unit can be made.

73,
Tom WB9RXJ

107. non magnetic & non penetrating mount for hustler mobile antennas

Message-ID: <1992Mar19.183832.7278@cbnewsh.cb.att.com>
Source record: 292025

hi folks,

i am planning on installing a hustler HF mobile antenna
on my toyota. i would prefer a trunk lip mount, but hustler
does not recommend using their version of the trunk lip
mount for this antenna.

the mast (MO-1) has the standard 3/8"x24 thread; the
mast+resonator is about 5'. The whole assembly is fairly
rigid.

i would appreciate any pointers on locating an alternate
trunk lip mount.

btw. i cannot use a bumper mount as the bumper on the car
appears to be a solid mass of molded plastic and too wide
for J clamps.

thanks.

- dwarak

I used to live in the Peoples Republic of Boulder. I moved away.
Partly because of their stupid antenna law. I plan to write an
open letter to the county (and send letters to the local paper
and the Denver Post - wonder if it will get published?) about
it one of these days.

Anyway:

In article <1992Mar14.033328.43470@yuma.acns.colostate.edu>
steven@ulysses.atmos.colostate.edu (Steven London) writes:
>
>Lot's of luck to you guys in suburban Buffalo !
>
>Here in the Peoples Republic of Boulder,
>we have been fighting the county for 5 years in Federal Court. The
>current county ordinance was passed about 4 years ago when a local...
> To quote Judge Sherman Finesilver:
>... (decision on Dec 1991)

>Naturally, the Peoples Republic of Boulder couldn't let this stand -
>they are taking this to Federal Appeals Court. By the way, this is
>the first time that a ham has won in Federal Court, that the municipality
>has taken it to Federal Appeals Court. In every other case that hams
>have won at the Federal level, the municipality has given up.

>Steve London, N2IC/0
>steven@ulysses.atmos.colostate.edu

Yeah, they are just jerks enough to appeal it. Hoping to win by
financial ruination of opponent, maybe? I sure hope that they
get to pay the legal fees of the hams! (No chance, I bet, since
its not that sort of lawsuit, I'm sure. Oh, well)

I had heard that Judge Sherman had ruled against the hams,
either I've got the wrong judge or my info was wrong....

Story I heard was that the judge had told the County all the
things that they had to do, and all the things they could not
do, and told the county and the hams to get together and work
out an ordinance that both could live with. Then the
county went off and (according to my interpretation of what
I read and heard about what their limits were, and according
to what I saw in person when attending some of those sessions
where they met with "concerned parties" - what a joke) ...
as I was saying before I interrupted myself: the county went
off and basically did none of the things they were told to do

and all of the things they were told not to do - AND THEN
THE JUDGE FOUND IN THE COUNTY's FAVOR! Then I found out that
she lived in one of the more expensive areas of Boulder County.

Since I had posted this on the net before, I'm posting again and
asking if its wrong - if so I'll retract it (whatever THAT means!).

Or perhaps this first round was in a different court?

...

Boy, I'm glad I moved!

Switching to a slightly different part of the same subject (antennas
and antenna restrictions): I've been having discussions with
a person here at work who thinks that people have the right
to prohibit anybody in their neighborhood from doing anything
which will reduce the (original person's) property values.

TO which I reply:

Read my lips: There is no constitutional right to having your
property value being protected by the government.

Recently I read something in the Phoenix paper about folks in
north phx wanting restrictions placed on what sorts of communication
antennas could be placed on a butte (WHICH THEY DO NOT OWN!) because
"it MIGHT lower their property value".

I'm sorry, but my reply to that is "Tough. Sell your house now
before they put up more, or be prepared to compensate the owner of
the butte for lost revenue."

(But then, I think that zoning laws, while attempting to pursue
a noble goal, are most likely unconstitutional (where I *do not*
define constitutional as "whatever the Supreme Court says it
means" - sheesh!))

Back to the topic:

So, what can *I* do about the continuing use of "esthetics" and
"preservation of property values" as a club to beat other people
into conformity? Any ideas?

(I suppose first would be to support the hams of the PRB (funny that
the Peoples Republic of Boulder and PRB1 should have the same
intials!) and of Buffalo (interesting that buffalo, home of
marvin the callsign server should be the other site of this
problem!). Last I had heard Boulder was doing ok financial-wise,
is this still true? How is it going in Buffalo? What can
the 'general ham' do to help, besides give money???)

To which greg woods responded:
>The FCC only recognizes one "Technician" license. They don't differentiate
>between the "no-code" and "Plus" licenses.

I might add that it is *very important* Michael (and anyone else in this
situation) KEEPS THE ORIGINAL LICENSE! This is the *only* proof you have
that you were licensed when code was required (unless you still have a
5 WPM certificate of successful completion), and are therefore eligible to
use HF frequencies.

I'm not sure what the new coded Techs do; I imagine they probably get a
CSC?

Of course, once you pass your 13 WPM, it won't matter :-)

I was talking with some friends recently who worked with soemone
whos car would act badly in a certain area of town. They were
wondering if it had anything to do with the radio station nearby.

SO, I fired up my mobile rig on 10m (while parked next to them),
and said "n7ikq testing" (yes, I said it lower case :-), and LO!,
his engine rpm dropped to about 1/2 of its value when I was
not transmitting! Car was a diesel Mercedes I believe.

(Not as funny as Gary's story, though! :-)

You will find 30M is as much fun as you can have with your amplifier off.
As the cycle grinds down over the next few years, 30M is going to get
better and better. Lots of friendly folks who like to CW ragchew, DX
showing up at night when most working OPs are active, no nets, no
contests, everybody barefoot. I meet a group of locals after the house
is quiet and I can sneak off to the shack, chew a bit, then go and mix
it up with lots of DX stations from early risers in Europe to late
afternoon pacific/asia OPs. You never know who is going to be out there.
It's an adventure every time you power up. I would like to see novice/
tech OPs allowed on 30M. It would give them a place to experience the
best that CW has to offer. A letter to ARRL is in order...

Saddly this is the case these days, but it wasn't always true. It
used to be matter of course that the first time you worked someone
you sent him a card. He usually had a card on it's way to you at the
same time. It was part of ham radio. Now people generally can't be
bothered.

It depends if you want to buy new equipment or used. For right now, let me assume that you are buying new. I'd punt on a receiver. The receivers that are as decent for ham type use cost about the same as a transceiver. I'd buy one of the General Coverage transceivers like the Kenwood 450, or it's Icom, or Yaesu equivelents. Otherwise you are going to have this receiver that you paid a bit of money for that you probably won't be getting that much use from. For VHF/UHF packet and comm stuff it really depends on what you want to do and how much money you want to spend. I tend to use a FT-470 handy for everything voice wise (I use a magmount with it in the car, Margy had one of the RF Concepts dual band amplifiers in hers because she's power hungry). I use a cheap Kenwood mobile rig for packet.

Ok guys, dig around in your junk bins. I'm looking for Motorola HT-200's that people would like to get rid of for next to nothing. These are big clunky crystal commercial service hand helds from days gone buy. Their about the size of a brick and have a greyish plastic front and bare metal back. I'd love one that was crystalled closer to the 440 band, but I'll take just about anything if the price is right.

Now that we've about settled that half the energy is lost when we connect a charged cap to an equal-valued uncharged cap, how about this one:

Give me a practical circuit that will transfer essentially all of a .001 coulomb charge from a 1uF capacitor to another similar 1uF capacitor. No other power source. Energy loss less than one percent.

>(e-mail).

ELNEC isn't a shareware or freeware program. If anyone is aware of an FTP site which does have it, I would be very appreciative if you would let me know. You may find a ("cripple-ware") demo version of ELNEC on an FTP site or BBS. This can be freely copied. I've asked recipients to plainly mark it as a demo, however, to prevent propagating the mistaken idea that ELNEC is shareware.

You can get information about ELNEC from:

123. HamCom and SoundBlaster

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 00:45:57 UTC
From: jlp@wet.UUCP
Message-ID: <3662@wet.UUCP>
Source record: 291884

Greetings all! As I sat by my computer soldering my fingers, making a mess and having a fine old time creating a new 20 meter QRP rig, a question came to mind: Has anyone ever attempted to interface a computer with a receiver using the headphone jack on the receiver and the audio-in jack on a sound board?

I currently use a DX-440 as my receiver and build my own transmitters due to a rather limited budget and it seemed like a feasible and cheap way to get the most out of my current computer equipment.

The idea originated when I was reading the docs to HamCom 2.0. If anyone knows of a program that will do this, please let me know. Or, if anyone has any ideas on how to easily create such a program using C, send me your ideas.

124. Re: Radio Shack high wattage 50, 100 ohm resistors are inductive

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 02:10:49 UTC
From: alanb@hpnmdla.sr.hp.com
Message-ID: <14570340@hpnmdla.sr.hp.com>
Source record: 291890

I have successfully used a regular wirewound 50 ohm resistor on the lower HF bands as a dummy load. The trick is to wire a variable capacitor in series so you can tune out the inductance. As I recall (it's been many years), it worked fine on 80 and 40 meters, but the tuning was starting to get pretty "touchy" on 20 meters.

I took my remote apart (the system came FREE with the car from the dealer!), and discovered that the chip has a 12 hex digit sticker on it. When I asked the dealer about security (and I found somebody who knew what he was talking about... not easy), he said that it really was 96 bits of code, and that the manufacturer hadn't reused one yet (and probably wouldn't since that's a VERY large number of combinations before you run out... 2.81E14).

>Your best bet for avoiding car theft is not to own a car.

I have uploaded to WSMR-SIMTEL20.Army.Mil:

pd1:<msdos.hamradio>
PCT214.ZIP Realtime Satellite Tracker w/3D Graphics

PC-TRACK is a general purpose satellite tracking package designed to take the complexity and confusion out of finding where earth orbiting satellites (weather, amateur radio, military, foreign, etc.) are in space. PC-TRACK will track up to 8 satellites simultaneously and will provide antenna pointing data for them. PC-TRACK provides a colorful, graphical means of visually simulating satellite orbits both with stunning 3D spherical displays as well as flat map displays. PC-TRACK includes an integrated satellite and tracking station data manager, and the ability to define tracking defaults. Also included is PCTSCAN, a simple pass summary utility which can predict upcoming visible passes. PC-TRACK also includes a utility to convert on-line NORAD/NASA Two Line Orbital element files to PC-TRACK format.

Island. Check 1824, 3524, 7024, 10104, 14024, 18074, 21024, 24894
and 28024 kHz for CW. Check 1845, 3795, 7065, 14195, 18145, 21295,
24945 and 28495 kHz for SSB. Listen for their 6 meter beacon on
50117 kHz, and on 2 meters EME at 144.028 MHz. RTTY is planned for
95 kHz up from band edge on 20, 15 and 10 meters. QSL via KA6V.

COCOS KEELING DXPEDITION. Fritz and Claudia will be signing VK9CK
and VK9CL until April 6, and plan to be active on 160 through 6
meters, plus satellites, CW, SSB and RTTY. Look for them during the
CQ WPX SSB Contest, March 28 and 29. Suggested frequencies are 1831
or 1911, 3505, 7005, 10103, 14005, 18073, 21005, 24895 and 28005 kHz
for CW. For SSB, check 3789, 7045, 14195, 18145, 21295 and 28495
kHz. On RTTY, look around 85 kHz up from band edge. Six meter
activity will be on 50110 kHz. QSL direct or Bureau via F6IMS.

AFGHANISTAN. YA5MM will be active for a few more days. Check 28030
or 28505 kHz starting at 1200z, 21030 or 21295 kHz around 1730 and
0300z, and 14030 or 14195 kHz around 0130z. Igor and crew have also
been heard on 3796 kHz between 2330 and 0130z. QSL to Igor
Petrashko, PO Box 321, Sofia 1000, Bulgaria.

MONACO. John, 3A2LU, has been showing up regularly on 21335 kHz
between 15 and 1700z. QSL to John Copper, 22 Blvd d Italie,
MC-98000, Monaco.

KUWAIT. Bob, WA8MOA, is now licensed as 9K2ZR. He and some other
9K2s have secured permission for 6 meter operations, so a rig has
```

been sent to them via air mail.

MACAO. Iris Colvin is QRV as XX9TQL on 20 meter SSB.

ANGOLA. Doug, WA9PQX/D2 was on 21320 kHz at 2100z. QSL his home call.

NEW CALEDONIA. FK8CP recently showed up on 1830 kHz at 1120z with slow CW, but with a good signal.

KURE ISLAND. Rick, KH6JEB/KH7, has been very busy this past week and will be wrapping up operations soon.

LACCADIVE ISLANDS. VU2NTA reports their license is secured and its a go for the second week in April.

OBLAST CHASERS. UW4WA is going to Oblast 106 using the callsign R0H from July 20 to August 10.

3B8CF/3B7 QSLs. Jacky, 3B8CF, still has about 3000 cards to be mailed. Please be patient.

RTTY TIPS. 3B9FR, ZD9BV and 7Q7LA are all very active and will QSY to RTTY upon request. SV1AHH will be in Crete, SV9, from April 18 to May 3.

WARC BAND TIPS.

134. Help with HIPLOT

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 12:35:59 UTC
From: darel@maccs.dcss.mcmaster.ca
Message-ID: <1992Mar20.123559.29753@maccs.dcss.mcmaster.ca>
Source record: 291955
Cross-posted to: rec.radio.amateur.misc,sci.electronics

Hello,

I was able to acquire a rather old Houston Instruments single
pen plotter (one of the old industry standard HIPLOT series)
to use for putting the artwork on PCBs. However, as is usually
the case there is absolutely no documentation for it and it
does not appear to be included as one of the conventional
drivers for any of the cad packages I have acces to. I was
wondering if anyone has experience with this plotter, and
can shed some light on the missing technical or configuration
information?

Model DMP-4
Single Pen Plotter
Fitted with the serial interface board which plugs into a
~25pin edge connector.
Single Pen, 8.5x11 inch bed with buttons down the right side,
these include [RESET][MANUAL][REMOTE][UP][DOWN][<][>][^][v].

Any help or info you can provide would be great.
Thanks;

Darel

I was thinking about doing this....but two things have stopped me.....
first, the RFI from my computer is really bad on HF at times (depends on the
band + what keyboard I have hooked up). second, I bought a KAM, and so now
doing this wouldn't mean much to me. :-)

on a related note, however, let me ask this: another thing I've thought
about doing (and my guess is it'd be tough to code) is setting something
up where the SoundBlaster acts as a very flexible (at least, I think it
would be) audio filter. has anyone thought about this? anyone think it
would be worth the effort?

type at y'all later.

Nothing in this world is FREE, especially from a car dealer. Did you
pay anything close to the dealer invoice?(not the MSRP) Even if you
did, remember that the dealers get 1k - 2k from the factory for each
car (of certain types) they sell, and that you can also bargain with
those factory to dealer incentives (ie. get them to reduce the car price
by a large fraction of the factory incentive. Generally, if you have
all your numbers correct, you should be able to walk out of the dealership
with a car approximately 10%-15% above what the dealer *actually* paid
for it!

No disillusionment intended :-)

138. TM-741 mods?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 13:55:48 UTC
From: DAVID.BUSHONG@OFFICE.WANG.COM
Message-ID: <9203201355.AA03249@sununix.comm.wang.com>
Source record: 291892

Could anyone comment on mods that are available for the TM-741? Two
that I'm interested in are:

What do you get when you make the mod for crossband repeater operation
(like, give an example of how I could then use the rig in conjunction
with my HT), and

Can I receive an AM signal with the 10 meter deck? It automatically
switches to AM when I receive 118-136, but not so in the 11-m band.

Thanks for any replies; either post here, or e-mail.

Message-ID: <1992Mar20.140227.13516@linus.mitre.org>
Source record: 291950

I just got a catalog from International Radio and Computer, Inc. It lists Fox Tango filters for the following Yaesu radios: FT-757GX, 767GX, 101, 77, 1, 901,902, 107, 707, 980, 726, 200, 301, 7, 7B, dx560, dx570, 401. Also Drake R-4C, TR7, R7, all Heath HF sets, and Collins 75S3-B/C. Both SSB and CW filters are listed for most transceivers (exceptions: FT-980 and 726: CW only, and FT-dx560/570 and FT-401: SSB only), and most sell for $70 (a few are $80-$90); shipping is extra.

The address is:

International Radio and Computer, Inc

Don Britton Enterprises used to sell plans and kits for all kinds of
of electronic projects including some that were useful for ATV and amateur
radio. I had a very old catalog (early '80s vintage), and mailed for a new
catalog. The letter came back "Box Closed - No Order". Does anyone know
what happened to the company? Did they move, sell out or go bankrupt?
There were some plans that I would like to obtain. Could someone post what
has happened or a new address or phone number for them?
Thanks.

Message-ID: <1992Mar20.153602.7485@cbnewsm.cb.att.com>
Source record: 291956

I can tell you what I did that worked out really well for me. I bought a
old Swan tube rig, a MFJ949D and a G5RV antenna (a multiband dipole). With
this simple setup I have worked over a 110 countries. A used tube rig you
can buy for for $250 to $300. The MFJ949d which is a antenna tuner, SWR meter
and dummy load all in one, this you can buy new for $139 or there abouts.
The G5RV I bought for $29 along with a few feet of coax.
I sold my bike and bought 2 used 2 meter HTs for about $250. They were old
and bulky but they have PL and they worked great!

So for less then the price of a brand new HF rig I got much more for my money
and have been very happy with it. 73!

From: benchoff@groupw.cns.vt.edu
Message-ID: <3584@vtserf.cc.vt.edu>
Source record: 291902

Let me apologize in advance for posting something off the main subject, but I think it could be of general interest anyway.

The topic at hand is Ethernet over coax versus unshielded twisted pairs and interference. I suppose a lot of this is relevant to the balanced feedline vs coax topic that has had some discussion here. Can anyone pass along some theory or references on how UTP and coax are affected in various noise environments? What about parallel conductors vs twisted pairs? I can find info on calculating impedance, loss, etc. in my rusty old textbooks, but nothing on noise problems.

I guess it would be best to reply via mail unless the information would also apply to the selection of antenna feedlines.

148. Summary - Getting onto the Hamsats

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 16:57:07 UTC
From: sgreene@access.digex.com
Message-ID: <1992Mar20.165707.3374@access.digex.com>
Source record: 291973

On Wednesday, 11 March 1992, I posted a message to rec.radio.amateur.misc asking for suggestions and advice on
equipment for using the amateur satellites. This article is a
summary of the responses I received, as well as some related
e-mail and news articles.

A big thank-you to those who responded directly to my
posting or posted a related article:

mbutts@mentorg.com or mbutts@qcktrn.com (Mike Butts), KC7IT
psmith@mozart.convex.com (Presley Smith), N5VGC
rwa@cs.athabascau.ca (Ross Alexander), VE6PDQ
gary@ke4zv.uucp (Gary Coffman), KE4ZV
Andy MacAllister, WA5ZIB (via CompuServe's Internet gateway)
Don_R._Moberly.El_Segundo@xerox.COM, WB6LFC

Here's the consensus opinions (any misrepresentations or
misquotes are my own - so flame me, not the nice folks who contributed!)

Antennas:

For AO-13, the consensus is get to get KLMs, Telex/Hy-Gains, or
roll-your own, Nobody liked the Cushcraft satellite antennas -
they appear to have problems in wet weather. Bigger is also
better, if you have the space. Several people mentioned the
KLM 22C and 40CX pair as excellent performers (again - you
need the room for those long booms!) KE4ZV stated his pair of
KLMs (the big ones!) lets him work AO-13 with 3 to 30 watts
(hardline feed and rigorous attention to routing the feedlines a
nd cables properly to maintain the antenna patterns helps, too.).
Others mentioned the KLM 14C/18C pair as good performers -
but you need more power on the uplink.

Telex/Hy-Gain antennas were recommended by several people
as a less expensive alternative to KLMs that work almost as
well. There's also M2 (started by an engineer from KLM).
While no one who responded uses them, the information I
received from a call to their factory in California suggests
they are comparable to slightly better than the KLMs in
performance, and about the same in cost. Dave, WB6LFC, said homebrewing antennas is also feasible - it takes work,
but attention to detail results in top-notch performance
for very little money. Finally, Ross, VE6PDQ, reported good
results using a pair of Cushcraft 215WBs on receive.

Problems encountered with AO-13 antennas include routing cables and feedlines off the back of the antennas (to preserve antenna patterns), use of fiberglass cross booms, mounting preamps as close to the feedpoint as possible, and long antenna booms drooping. (Gary, KE4ZV, recommends using a rope to brace the boom or stiffening booms and fiberglass masts internally with foam-in-a-can insulation.)

On antenna rotators, it appears the Alliance UD-100 is no longer made, though it should still show up at hamfests. People with long-boom antennas report the Alliance rotator is too weak to move a big array anyway, and recommended Yaesu's elevation-only rotator or their Model 5400 azimuth-elevation unit.

Antennas for the low-altitude satellites appear to be much less critical. J-poles were most frequently mentioned (the design from the AMSAT Journal?), but dipoles, ground-planes, and yagis are also in use. Several people work RS-10 quite well with antennas in the attic. Best results are with steerable antennas, but the high operator workload during a pass (unless the satellite is just grazing your access circle) almost demands computer control of the rotators.

Preamps:

You need a preamp for AO-13. (I can hear the downlink after a fashion on a Ringo fed with cheap coax and a 10 dB preamp in the shack, but it's not communications quality reception!) Only two people mentioned a specific brand name (Advanced Receiver Research and the unit included with the Ten-Tec 2510), so I assume almost any GAsFET preamp in the 20dB gain class is adequate. THE PREAMP MUST (almost always) BE MOUNTED AT THE ANTENNA (check the discussion in Chapter 9 of the Satellite Experimenter's Handbook and you'll see why!). KE4ZV recommends mounting the preamp AT the antenna feedpoint, if your elevation rotator can handle the unbalanced load.

While no one mentioned it (maybe it's obvious), if the antenna is used to transmit (say Mode J) as well as receive (on Mode B, for example), the preamp MUST either include RF-sensed switching, or be switched out of the line before you transmit. TRANSMITTING INTO AN UNPROTECTED PREAMP WILL DESTROY IT INSTANTLY!

Preamps also seem to help on RS-10 (especially with older HF rigs) and on the Pacsats. It seems to be a case of "try it, and get a preamp if it looks like it

would help").

Rigs:

Three radios were mentioned by name - Yaesu FT736
(and it's predecessor, the 726 with satellite module),
Kenwood TR751 (a mobile-capable 2 meter multimode),
and Ten-Tec's 2510. The Ten-Tec unit is out of production.
The few units left are selling for about $300-350. I'm
sure other multi-mode radios, and setups with converters
and transverters work well, too - it's just that no one
mentioned any by name.

Power output required is a function of the satellite,
your antennas, and how badly you want to communicate.
[QRP on the satellites is just like QRP on HF - you need
good antennas and feedline, you have to pick optimal
passes, and skilled operators at both ends are needed.
Given the apparent "calmer" operating style on AO-13,
QRP is probably easier there than on 20 meters!]

Anyway -about power for AO-13. 3-30 watts will
work if you have top-notch antennas (KE4ZV).
KC7IT uses 50-100 watts (Ten Tec 2510, Mirage D1010
amplifier, KLM 14C/18C fed with 50 feet of 9913).
Both KE4ZV and KC7IT use Mirage D1010 amplifiers
on 70 cm when they need a little extra power.
For an "optimum station", WA5ZIB recommends
60 watts on 70 cm and 80 watts on 2 meters for
AO-13, assuming good antennas (Telex/Hy-Gain or
better) and feedlines, and 20 watts to a 5' dish for Mode L.
Andy emphasized that you can get by and have lots
of fun with much less!

For Mode A, WA5ZIB said 6 watts to the AO-13 2 meter
antenna will work well. People using omnis report
success with the Pacsats running 50-70 watts to a
J-Pole (N5VGC). Several people said they (or someone
they know) have no trouble using RS-10 at lower
power (10-25 watts) with simple, omnidirectional
antennas. Again, it's a case of "try it and see if it works."

There was unanimous consensus that the receiving
quipment (antenna, preamp, feedline, and receiver)
is more important than the transmit equipment.
Running more power "to hear yourself" is frowned
upon, to say the least! It's also important to be able
to vary uplink power to adjust to specific conditions.
Both the Ten Tec 2510 and the Yaesu 736 have
continuously variable power output (I guess the
rest of us just have to fiddle with the drive controls

on our rigs!).

Accessories and Other Stuff:

You need a PSK modem to use the Pacsats. PacCom
makes fully assembled units, either already integrated
with their own TNC, or as a board you install in your
TNC-2 clone. They make similar 9600 bps units for
accessing UO-22. The downlink receiver (on 70 cm)
should be capable of being tuned by the PSK modem's
AFC lines. Newer radios can use the up/down lines from
the microphone jack or an accessory connection on the
rear panel. Older radios must be modified, or be tuned
manually. N5VGC told me he sees about 20KHz of doppler
on an AO-16 pass, and that without automatic tuning,
operator workload is too high to do much else besides
tune the receiver!

Just about any radio suitable for packet on 2 meters
will work for AO-16, WO18, and LU-19. To run 9600
bps on UO-22, modifications to bypass the microphone
and speaker's audio processing circuits are required.
I've seen some reports on rec.radio.packet and in the
various Hamsat columns that differences between
UO14 and UO-22's transmitters make UO-22 more
difficult to copy. (I'll worry about that problem
later - I'll start with AO-16 and LU-19 first!)

No one mentioned computers - again, it must be
obvious (also, we're "talking" using computers!).
They're handy, and you need one IN THE SHACK when
working the Pacsats or for automated, real-time
control of antenna rotators (useful for low altitude satellites).

Other operator aids mentioned, or I thought of on my
own: If your radio can't slave uplink and downlink
tuning (Ten Tec 2510 and Yaesu 736 can), you need
something to help convert between uplink and downlink
frequencies (and account for doppler shift and calibration
errors on the radios' frequency readouts). A cardboard
slide scale or dial will work. I'm thinking of programming
my HP48 to do the conversion for me. You need something
like this to know where to tune on the uplink to hear
a given downlink frequency.

Software to track satellites and predict passes. There
are many programs that work. Price ranges from free
to $70 for state-of-the-art QuickTrack or InstantTrack
(available from AMSAT). Special software is also needed
to use the Pacsats, and to interpret telemetry data. This
software is also available from the usual ham sources, and

from AMSAT (BTW, software sales support the
amateur satellite program!)

Polarity switchers optimize antenna performance by
allowing switching antenna feeds from RHCP to LHCP as
the need arises. They are a very useful add-on, but
don't appear essential.

Equipment to measure power output, SWR, transmit
frequency - all useful (see - satellites are not that
different from HF!).

Conclusion:

Finally, there's AMSAT! They're the people who build
and run several of the satellites (AO-10, AO-13, AO-16),
and have a hand in many of the others! They're also
beginning development of the replacement for
Oscar 13 (known as Phase 3-D). ANYONE INTERESTED IN THE
AMATEUR SATELLITES SHOULD BECOME AN AMSAT MEMBER.
Its' the closest place I've found to one-stop-shopping
for information on the satellites (this newsgroup is number
two, at least until I get onto the satellites myself!).
You can reach AMSAT at:

AMSAT
PO Box 27
Washington, DC 20044
(301)589-6062

I know there are several AMSAT members in this
newsgroup (who even have satellite experience. I'm
still working on it!) - so you can always ask here!

Again, thanks to everyone who answered my query!
You've helped a great deal. I'll look for you on the birds!

73, Steve (AMSAT Member 21876)

149. KENWOOD 732 VS 741?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 17:26:16 UTC
From: ppddgc@uwovax.uwo.ca
Message-ID: <1992Mar20.122616.1061@uwovax.uwo.ca>
Source record: 291894

Can anyone provide me with feedback on the Kenwood 732 mobile?

Had hoped to save enough to buy a 741 but don't need multiple band
(three) operation.

What are the differences? Are there as many mods? 130 mhz 800 mhz etc.

Thanks,

Dave VE3ZDC

From experience with earlier Shuttle missions, I can say that you'll
need about 20 kW ERP to insure being heard by the Shuttle in an urban
area like Chicago. A HT and a duck *can* receive the Shuttle, and *can*
work the Shuttle if there's no competition, but you're likely to be
one of hundreds, probably thousands, of stations in the footprint of
the Shuttle who are calling. The odds of your being heard are slim.

A quarterwave whip is ok for the Shuttle when it's near the horizon,
but when it's overhead you should switch to something like a turnstile.
Of course I don't think the Shuttle will be making any overhead passes
of Chicago, so the vertical will be fine for hearing the Shuttle. A
few hundred watts into a tracking beam is likely to be needed to *work*
the Shuttle from your location. Just hearing it is a thrill.

Gary KE4ZV

152. Shuttle as passive reflector?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 18:42:29 UTC
From: kfeeney@helios.TN.CORNELL.EDU
Message-ID: <9203201836.AA29507@helios.TN.CORNELL.EDU>
Source record: 291967

Hello all,
A couple of nights ago the group of us working on the local SAREX effort got to wondering if it was possible to use the shuttle to bounce signals off off. I believe the shuttle is something like 120 ft by 80 ft by 40 ft, which is pretty large and compares well to the ECHO balloons (100 ft aluminized mylar) that were orbited as passive reflectors. ANybody know what kind of power was needed to get usable signals off of those? I realized that we might be talking orders of magnitude above what we can manage (we are shooting for about 2 kw ERP) but it can't hurt to ask. Maybe if we can't burn through the QRM to work the shuttle directly, we might be able to get a consolation prize by making an ESE contact :-) Seriously, anyone know the power levels used in the echo experiments? Any hams manage to use those passive reflectors? Anyone want to try to listen for uplink signals being scattered back down from the shuttle?

Just a thought...

I have a question about this. I currently hold a no-code Tech license,
and am ready to take my 5wpm novice code test. For upgrading to Tech
from novice, you are supposed to use a /KT suffix to indicate temporary
operating privileges when you do not yet have your actual license but have
passed the Tech exam; I cannot find any temporary suffix for a technician
upgrading to HF privileges. Is there such a thing?

154. My List of Mail Order Electronics Companies

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 19:06:22 UTC
From: jfw@ksr.com
Message-ID: <10822@ksr.com>
Source record: 291918
Cross-posted to: sci.electronics,rec.radio.amateur.misc

[$Revision: 2.8 $; last updated 20 March 1992]

Here is my list of companies which will sell electronic components in small quantities. Most of these places I have bought from, a couple I haven't. Being a ham radio operator, I am most interested in RF components, and in particular, air variable capacitors, which tend to be scarce (and tend to be used or surplus even if I've otherwise labelled the seller as "NEW"). I apologize in advance for disparaging remarks about what happens when parts suppliers start selling computers, but anyone who has watched Jameco over the years will know just what I mean (though their latest catalog hints at possibly returning to selling parts).

Categories are:
NEW COMPONENTS Distributors and sellers of new components, or "new and some used" in a couple of cases.
SURPLUS ELECTRONICS Usually overstocks, occasionally used equipment. Ideal for stocking the junkbox, usually have dependable stock lines of resistors, capacitors, and some semiconductors, but won't have those LCD modules forever... An invaluable resource, don't shy away from them.
SPECIALTY COMPONENTS In particular, crystals and toroidal cores.
KITS Ham radio kits, random electronic kits, whatever they have.
LITTLE GUYS Separated out because of some twisted sentimentality, I suppose. Intended to honor one or two ham spare-bedroom operations.
PUBLICATIONS Two publications which are essentially all want-ads, plus the address for SAMS PHOTOFACTS because everyone always asks about it on sci.electronics.

Note on shipping costs: I don't always update these frequently enough, and they're generally for continental US unless otherwise mentioned.

NEW COMPONENTS:

Ocean State Electronics
P.O. Box 1458
Westerly RI 02891
(800)-866-6626 (orders)
(401)-596-3080
(401)-596-3590 (FAX)
Minimum $5, S&H $4, free catalog. Wide array of RF parts, especially air variables and B&W coils.

Radiokit (store is located at:)
P.O.Box 973 169 Jeremy Hill Rd.

Pelham NH 03076 Pelham NH 03076
(603) 635-2235
No minimum ($3 service charge if under $20), many kits, lots of J. W. Miller chokes & coils, B&W coils, RF switches, Millen variable capacitors, lots of parts in general. Send $1 for the catalog.

Circuit Specialists Inc
P. O. Box 3047
Scottsdale AZ 85271-3047
(800) 528-1417
No minimum with check or money order, $15 otherwise. $3 S&H.
New electronics, good RF assortment, increasing infestation of computers.

Mouser Electronics Mouser Electronics Mouser Electronics
11433 Woodside Ave. 2401 Highway 287 North 12 Emery Ave.
Santee CA 92071 Mansfield TX 76063 Randolf NJ 07869
Mouser Electronics
370 Tomkins Court
Gilroy CA 95020
Catalog Subscriptions: (800) 992-9943 (Continental US only)
Sales & Service: (800) 34-MOUSER (800-346-6873) (US, Puerto R., Canada)
Very complete catalog of brand-new components (though no air variables). Usually quick service, $20 "minimum" ($5 charge under $20). When ordering, you may want to be sure to ask about availability and shipping locations; they have several warehouses, and frequently orders will get sent from several warehouses (which drives up the shipping costs).

Digi-Key
701 Brooks Ave. South
P.O.Box 677
Thief River Falls, MN 56701-0677
1-800-DIGI-KEY
No minimum, $5 handling under $25, free and very complete catalog, very nice indeed. Prices aren't always the best, but rarely excessive. Weak on RF specialty parts (though they now have the ever-popular NE602N), but they do have blue LEDs.

Active Electronics
11 Cummings Park
Woburn MA 01801
(800)-677-8899 (US)
(800)-363-6592 (Canada)
$25 minimum, $5 S&H UPS, free catalog. They have 8 stores in the US (Santa Clara CA; Chicago IL; Baltimore MD; Woburn MA; Detroit MI; Mt. Laurel NJ; Long Island NY; Seattle WA) and 9 stores in Canada (Quebec City; Montreal (2); Ottawa; Mississuaga; Winnipeg; Calgary; Edmonton; Vancouver BC). Lots of stuff, oriented more toward supplying last-minute requirements of companies than hobbyists, but perfectly happy to take your money in small doses (stores have no minimum order or shipping&handling). Some items in their catalog are subject to a $25 per ITEM minimum, which is kind of a drag.

Newark Electronics
Send catalog requests to:
Newark Electronics
ATTENTION CATALOG DEPARTMENT
4801 N. Ravenswood Ave.
Chicago IL 60640-4496
(312) 784-5100
They don't have a single mail address or phone; instead, one is supposed to call the closest of three pages worth of branch offices. I don't feel like typing in the entire list (it's copyrighted, anyway :-), so send email for your "local" distributor, or call their administrative offices at the number above. They have a $25 minimum order; they are a Real Distributor, but accept small orders (over the minimum, of course). Their catalog currently 1248 pages; they are very complete (except, of course, for my favorite scarce item, the air-variable capacitor). Note that the catalog prices tend not to match reality all that often, so order by phone rather than by mail; prices tend to be higher than other places, but they have a lot of things that are hard to find from other outlets.

Arrow Electronics, Inc. Catalog requests to:
Catalog Division Catalog Division
1860 Smithtown Ave. 25 Hub Drive
Ronkonkoma NY 11779 Melville NY 11747-9828
(800) 93-ARROW
Minimum $25; catalog cover price is $25 but if you convince them you're with a company they'll probably send one free. They are a Real Distribitor, but also didn't mind my placing a personal order.

MCM Electronics
650 Congress Park Drive
Centerville OH 45459-4072
(800) 543-4330
Minimum $20 ($25 for charge cards, and they don't take personal checks), handling $1.95 + shipping. Oriented toward repair technicians, really heavy on VCR parts and somewhat overpriced doodads, lots of useful stuff not easily found elsewhere.

Fordham Radio Supply
260 Motor Parkway
Hauppauge NY 11788-5134
(800)695-4848
Tools for technicians. One or two items are not outrageously overpriced.

Jameco
1355 Shoreway Road
Belmost CA 94002
(800) 831-4242
(800) 237-6948 (FAX)
(415) 592-8097
$30 minimum order (was $50), >$5 shipping & handling. Their most recent catalog may have reversed a long trend of abandoning parts in favor of PC compatibles, or it may not; one can always hope.

JDR Microdevices
2233 Branham Lane
San Jose CA 95124
Orders: 800-538-5000
Cust. Service: 800-538-5001
No minimum, $5+ shipping. Mostly computers now, but they haven't yet decided to abandon components; indeed, they recently dropped their minimum order requirement entirely.

Johnson Shop Products
P.O.Box 160113
Cupertino CA 95016
(408)257-8614 (408)996-3240
Catalog $1. No minimum. Shipping charge is based on UPS; very small orders that can be sensibly shipped in a first-class letter, include money for first-class postage. New and some used electronic parts.

DC Electronics
P. O. Box 3203
Scottsdale AZ 85271-3203
(800) 423-0070 (orders)
(602) 945-7736 (stock/price checks)
$15 minimum charge order, no minimum for checks, $3 min. shipping&handling. Wide array of ICs, good assortment of electronic components.

Dick Smith Electronics USA
P.O. Box 468
Greenwood, IN 46142
(317) 888-7265
The American branch of the Australian company. Some parts and kits, mostly new equipment of all stripes (audio, CB, and lots of ham equipment). Prices seemed high last time I checked.

EasyTech Inc
2917 Bayview Drive
Fremont CA 94538-9932
(800) 582-4044 (orders)
(510) 770-2345 (customer Service)
Apparently a brand new company, "dedicated to serving the Electronic Enthusiast/User." $10 minimum, UPS shipping is 5% of order (>= $3).

International Components Corporation
1803 NW Lincoln Way
Toledo OR 97391-1014
(800)325-0101 (US & Canada)
(503) 336-4400 (FAX)
Cabinets&Enclosures; Capacitors; Diodes; ICs; Potentiometers; Resistors; Sockets; Transistors; Books. No minimum order, $2 handling under $25.

Kelvin Electronics
7 Fairchild Ave.
Plainview NY 11803
(800) 645-9212

(516) 349-7620
(516) 349-7830 (FAX)
Minimum order $20; S&H 5% of order ($5 minimum, extra for large stuff,
overnight, export (like to Hawaii :-), and etchant; based on UPS charges).
Lots of electronic parts & tools, some robotics supplies, model rockets.

H & R Company (Herbach and Rademan)
18 Canal Street, P.O.Box 122
Bristol PA 19007-0122
(800) 848-8001 (Orders)
(215) 788-5583
(215) 788-9577 (FAX)
Minimum order $25 ($5 processing charge under $25), shipping $4.75 under $30;
Most items are new overstocks, much regularly stocked stuff as well. Tools,
electrical supplies, motors, mechanical components, robotic components.

SURPLUS ELECTRONICS:

All Electronics Corp.
P. O. Box 567
Van Nuys CA 91408-0567
(800) 826-5432
$10 minimum, $3.50 S&H. New and surplus electronics.

Alltronics
2300 Zanker Road
San Jose CA 95131
(408) 943-9773
(408) 943-9776 FAX
Surplus electronics. $12 minimum, shipping per UPS.

American Science and Surplus (formerly JerryCo)
601 Linden Place
Evanston IL 60202
(708) 475-8440
Surplus. *The* surplus place. Lots and lots of surplus. WWII gun cameras,
velcro, laser disk chassis, 6 volt VW wipers motors, LEDs, rubber brains,
you name it, they've had it. Catalogs are a really good time.
$12.50 minimum order (which includes the $4 shipping charge).

BCD Electro
P. O. Box 450207
Garland TX 75045-0207
(214) 343-1770
$1 for 1-year subscription to catalogs, no minimum, $0.95 for under $30,
$2.90 shipping (extra for Alaska & Hawaii). Surplus electronics, pretty
random looking assortment.

Fair Radio Sales
P. O. Box 1105
1016 E Eureka St.
Lima OH 45802

(419) 227-6573
Surplus electronics. Heavy on parts for old Collins gear.

Hosfelt Electronics
2700 Sunset Blvd.
Steubenville OH 43952
(800) 524-6464
No minimum, $3.75 S&H. Surplus electronics.

HSC Electronic Supply (Halted Specialties Co.)
3500 Ryder Street
Santa Clara, CA 95051
(800) 4-HALTED Orders only
(408) 732-1573 inside California and outside US
Surplus (new) electronics; new and used test equipment. Minimum order $10
($2 handling charge under $20), plus UPS shipping cost. Has three stores,
of which 3500 Ryder Street is one.

Marlin P. Jones & Assoc.
P.O. Box 12685
Lake Park FL 33403-0685
(407) 848-8236
No minimum ($1 fee for under $10), shipping per UPS. Surplus electronics.

R&D Electronics
1224 Prospect Ave.
Cleveland OH 44115
orders: (800) 642-1123 (tues - fri 9am-4pm sat. 9am-3pm EST)
info: (216) 621-1121
$10 minimum. Surplus electronics.
"Also known to stock many components, but this is not discussed in the catalog.
Local store, a cleveland institution, is called Electronic Surplus, Inc., and
has been there since '48. Third generation now runs it." -- wb8foz

Surplus Sales of Nebraska
1315 Jones Street
Omaha, Nebraska 68102
(402) 346-4750
(402) 346-2939 (FAX)
New and surplus radio electronics. Wide selection: air variables.
Catalog $3 (free with order, refundable with $25 catalog purchase).

Tucker Surplus Store
1717 Reserve St.
Garland TX 75042
(800) 527-4642 extension 135
Surplus electronic gear; oscilloscopes and signal generators from the days
when dinosaurs with vacuum tubes roamed the earth (some solid state gear, but
all well used). Prices seem relatively high, and you'll be shocked to learn
how much it costs to ship a 75 pound oscilloscope by motor freight...
[Steve Brown, N8HFI:
In defense of Tucker, the have a broad selection, repair facilities, and

they certify the used equipment to meet the original specification and
warranty it for 90 days. Not every source does this:]

Davilyn Corp.
13406 Saticoy St.
North Hollywood, CA 91605-3475
1-800-235-6222 (Ex. CA)
1-818-787-3334 (CA)
1-818-787-4732 (FAX)
Surplus electronic gear.
[has much better prices [than Tucker], but sells used equipment as-is. -N8HFI]

SPECIALTY COMPONENTS:

JAN Crystals
2341 Crystal Drive
P.O. Box 06017
Fort Myers FL 33906-6017
(800) JAN-XTAL (Monday through Thursday)
They make crystals. Minimum order is $10, which might be one crystal, or
might be two.

Crystek Corporation
2351/2371 Crystal Drive
P.O. Box 06135
Fort Myers FL 33906-6135
(800) 237-3061 (M-F)
They make crystals too. They were the cheapest last time I ordered, but
I don't have an up-to-date price list. It took about 4 weeks, and they
had said it would take 6.

ICM (International Crystal Manufacturing Co., Inc.)
701 W. Sheridan
PO Box 26330
Oklahoma City OK 73126-0330
(800) 426-9825
More crystals. They were more expensive, but they have lots of pre-made
crystals for various rigs, so they would probably be faster.

Amidon Associates
2216 East Gladwick Street
Dominiguez Hills, CA 90220
(213) 763-5770
(213) 763-2250 (FAX)
Toroid cores and related things. Very fast service. Now takes MC/Visa and
phone orders.

Palomar Engineers
Box 455
Escondido CA 92033
(619) 747-3343
Toroid cores and shielding beads.

K2AW's Silicon Alley
175 Friends Lane
Westbury NY 11590
516-334-7024
Free catalog, $10 minimum order. Semiconductors, in particular high-voltage diodes.

Small Parts, Inc. [New address and phone, 23 Dec 91]
13980 NW 58th Court
P.O. Box 4650
Miami Lakes, FL 33014-0650
(305) 557-8222 Order department

Source record: 291942

Those of you who clip HTs to your belt know that the effect of the body precludes reception of weak signals. Fine for a hamfest, but you miss calls otherwise. The cops have rubber duckie antennas built into some of their external speaker-mikes...why can't we? What's the big deal about manufacturing an external speak-mike with a BNC connector and additional cable to the antenna input? Perhaps this is being done?? Does anyone know of a source?

161. Icom W2A thermal protection question.

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 20:10:04 UTC
From: bweaver@quack.sac.ca.us
Message-ID: <fKM#uEP@quack.sac.ca.us>
Source record: 291893

Greetings, when I put my Icom W2A ht on a watt meter and transmit
at 5W, after the radio gets warm/hot (about 1 minutes time) the
power level will start to drop off and eventually go down to
about 3 watts. I did this test throwing a dead carrier into
a dummy load for about 5 minutes. Now, I tested my friends W2A
and his did not seem to do reduce power as the radio got warm.
I called Icom and asked them which radio was acting correctly.
They said the W2A is supposed to start dropping off in power after
it starts to get warm.

I wanted to hear from people who have done this test, or who
will do it and report back to me. It also would be interesting
to hear what other HT's do like 470's and th77's. This is the
kind of info you cannot get from manuals or sales brochures.

162. Re: RFD: rec.radio.amateur.public-service

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 20:14:06 UTC
From: emmayche@msgate.corp.apple.com
Message-ID: <21720@goofy.Apple.COM>
Source record: 291946

For all of you who are either supportive or opposed to starting the new newsgroup rec.radio.amateur.public-service:

PLEASE! Express yourselves! Not just here, but also on news.groups. The discussion time for this RFD is limited; on April 3, if there has been no serious discussion, this proposal will die for lack of interest, unless we extend the discussion time.

I'm sure that there are other hams involved in public service activities besides myself. ARRL/CRRL/RSGB/etc. officials, this would be a great place for you to post the public-service goings-on of your area of responsibility. Even if all you did was a 5K walk, the rest of us need to hear from you what went wrong and why, and what went right and why. Amateur Radio needs to have its public image brought forward in the public mind and, in the USA, needs to be recognized as one of the most important, if not THE most important, volunteer activity in the country in terms of helping to save lives and property.

If we don't get a significant upswing in discussion well before April 3, the proposal WILL be abandoned. It will also be abandoned if the consensus is negative. PLEASE don't be apathetic about this - I haven't yet met the ham (including myself) who couldn't learn more about the SERVICE portion of the Amateur Radio Service.

Here's the RFD again, for those who missed it:
=========
Because of the volunteer nature of Amateur Radio, those with little or no experience in the fields of public safety, formal communications or coordinated radio activity in general sometimes find themselves not only involved with such activity, but in positions of leadership, the responsibilities of which are unfamiliar to them.

Although up to now there have been few requests for assistance, the need for preparedness and the unanswered requests (possibly due to getting lost in the noise) make me believe that it is perhaps time to establish this newsgroup.

Therefore, according to the USENET guidelines, here is the information concerning the proposed group. All of the below is subject to change during the discussion. Unless anyone seriously objects, I will coordinate the suggested changes and maintain the "official" copy until it either goes to a vote or is abandoned.

Name: rec.radio.amateur.public-service
Charter: Discussions of issues and procedures, requests for assistance (either informational or physical), organizational suggestions, etc.; all related by their relevance to Amateur Radio's mission

of serving the public. It's expected that discussions relating
to ARES, RACES, MARS, SKYWARN and similar organizations wil be
found here, as well as issues relating to support of other
organizations such as government, Red Cross, CAP, etc. Other
discussions relative to public service matters would also be
appropriate; discussions concerning FCC rules pertaining to these
matters should likely be revectored to rec.radio.amateur.policy.
Moderation: Unmoderated.
Discussion: Should take place on news.groups; hopefully
a general concensus will emerge by April 3, 1992 (first Friday
in April). At this time, either the proposal will be killed,
modified and resubmitted or sent to a vote.
=======
Please - take a stand and COMMENT today!

I posted this article yesterday. I am posting it again today
without the typos (I hope).

I am a blind ham operator and I recently purchased a Ten-Tec
Omni 5 model 562. I am looking for software for an IBM pc that will
let me monitor the status of or even control the operation of this radio.
I am especially interested in monitoring the SWR, S meter, power
settings, etc. If I can find a way of monitoring the SWR via my pc,
I can avoid purchasing the expensive auto antenna tuner ($800 +)
from Ten-Tec.

If anyone has any information that may be of some value to me, please contact me at:

electronic .. howie@ihlpb.att.com
voice .. (708) 979-3010

Thanks in advance for any and all assistance,
Howard J. Davis KF9FN

Myself and two friends have all purchased the Yaesu FT-2400 within the last three months and are pleased with the rig. This is the first 'real' mobile rig that I've owned and I like it much better than the HT and linear I was running with. The three of us haven't had any bad signal reports or heard of any design problems with the rig.
The Dec.91 QST reviewed five (maybe six) of the latest 2m rigs including the 2400 and I think the 229A.

170. Re: Parking at Dayton this year

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 22:15:49 UTC
From: 5rtrtrt@cbnewsf.cb.att.com
Message-ID: <1992Mar20.221549.23001@cbfsb.cb.att.com>
Source record: 291951

This topic was going around a few weeks ago.
Yes, at Dayton they have determined that parking for spectators
is to be eliminated and that the flea market is to be expanded, even
though the flea market is not fully utilized. It has been a pet peeve
of mine for the past several years, especially since I got rejected
last year and as of today still haven't gotten a reservation for
this years flea market.

Attendees are revolting against the policy by purchasing flea market
spots and using them for parking. No one ever said hams were not a
resourceful lot. The Hamvention staff has always published in the
brochures the statement that the flea market was only to be used for
selling, not parking, and that offenders would be towed away. The only
tow truck I ever saw at the Hamvention was a few years ago when they towed
cars off of the street in front of the arena.

It would seem that a sensible alternative would be to designate an area
of the lot as parking and charge an appropriate fee, and REALLY enforce
the selling rule in the real flea market.

I will be doing a survey this year and publish some hard facts about
the percentage of spots that were used for parking, or just plain empty
(yes, there are plenty!). My guess at this time is that it will
run in the area of 40-50 % on Friday and Saturday. Much higher on Sunday.

Rick KT2Q

171. QSLs

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-20 22:42:13 UTC
From: dube@cpdvax.CSc.ti.COM
Message-ID: <199203202237.AA02270@tilde.csc.ti.com>
Source record: 291916

I've noticed that, for domestic QSOs, I get about 10% QSLs if I *don't*
mail any out, and that number jumps to about 60% after I send 'em mine.
My assumption is that many people don't have call books or access to a
network call book. They gladly QSL when they get an address. My second
assumption is that, of the remaining 40 percent, only a fourth of those
will respond if I send 'em a SASE. This amounts to about 10 percent of
the QSOs, and does not, in my opinion, warrant the addexpense to me to
give them the 29 cents.

To me, part of the hobby is QSLing, and so I do it 100 percent, without
asking alms. That there are those who don't feel the same way I do about
it is no concern (although I sure would like to get just one card from
the half-dozen Mississippi QSOs I've had). Eventually, I'll work at least
one Ham in each state who sends cards without being bribed.

I am presently in need of a Mobile VHF-Lo band (30-50MHz)
transmitter for my vehicle. I would like 16 channels, and am
specifically looking for a radio that will cover 33-48MHz.. I
realize this is quite wide, so if you have other suggestions,
such as something that will cover 33MHz only, etc, please advise
me of them as well. I would like it to be digital, synthesized,
scanning, etc. I would like to buy something used, but if you
know of a company which sells radios that meet these specs, let
me know. Power output should be 25+ watts.

Any information is greatly appreciated. Please send mail.

ZCZC AS43
QST de W1AW
Satellite Bulletin 006 ARLS006
>From ARRL Headquarters Newington, CT
March 20, 1992
Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB SPACE ARL ARLS006
ARLS006 STS-45/FCC waiver

As of today, Friday, March 20, 1992, the FCC has formally granted
astronauts Kathryn Sullivan, N5YYV, and Dirk Frimout, ON1AFD,
scheduled to fly aboard shuttle mission STS-45, permission to
operate Amateur Radio from space.

The ARRL sought the rules waiver to allow Sullivan, who holds a
Technician-class license, to participate in the March 23-30 SAREX
mission. FCC rules require amateur stations in space to be
controlled by at least one Extra Class operator, and there was not
enough time to upgrade before the launch.

Frimout, who will also operate the SAREX station, was granted a US
reciprocal license on February 13, and holds a VHF-only license from
his home country of Belgium.

The waivers follow those granted on January 31, 1992, which allow
Atlantis astronauts David Leestma, N5WQC and Brian Duffy, N5WQW,
also technician-class licensees, to operate in space.

Although the SAREX equipment is a secondary activity, the four ham
astronauts say they'll try to be on the air as much as possible.

To all radio amateurs

SB PROP ARL ARLP012
ARLP012 Propagation de KT7H

What could be better than a K index of zero while heading for the
vernal equainox? That's what DXers faced this week, as we turn
toward Spring conditions, with the geomagnetic field stable and the
solar flux temporarily rising. The fux should peak around 225 on
the 24th, and then head down again toward a minimum near 140 on
April 9.

There are a few days of active geomagnetic indices forecast for the
27th and 28th, and again on April 3 and 4. Spring can bring more
geomagnetic disturbances, but also longer openings as we move away
from the short days of Winter.

On March 15 a strong solar flare erupted. The wave of protons was
slow to arrive, but caused an ionospheric disturbance early Tuesday.
The disturbed conditions were short lived, and the A index only rose
to 21. Otherwise, the week was dominated by quiet conditions.

American sunspot numbers for March 13 through 19 were 216, 223, 215,
147, 121, 102 and 110, with a mean of 162. Solar flux reported by
WWV for the same period was 165, 165, 169, 161, 159, 160 and 167,
with a mean of 163.7.

From: n6vbg@debisa
Message-ID: <1992Mar20.220821.1446@debisa>
Source record: 291897

Hello, good people,

I bought a Realistic HT recently, and so far so good. I'm really happy
with it.

The only limitation is that it covers 144.0 to 148.0 on receive. Many other
HT's cover a much wider range.

Does anyone know if there's a mod available for this HT to receive outside
the ham band?

>Kevin Sanders, KD6FKJ NCR/Teradata JDO
>kevin@sv001.sandiego.ncr.com (619) 597-3602

Since you already have a technician license, albeit codeless, you probably dont have to use the /KT. I believe, that you dont even have to request a new callsign, in which case your CSCE is all that is necessary for you to count yourself as a tech+. That is, the FCC makes no distinction between the two types of tech license at the *license* level. At the level of qualifying for the codeless license, the only distinction is made by the Volunteer Examiners at the time of testing. This means that, in part, the VEC's have taken over issuance of the Amateur Tech+ license for those codeless techs who are upgrading.

To make a long story even longer, you dont have to use any temporary identifier because your CSCE is the only thing you will receive unless you asked for a new callsign, and even then, the FCC will draw that callsign from the same pool that your original call was taken from.

>

Jason,

Here are a few of the main reasons I've discovered Dayton to be a REAL
Amateur Radio educational experience...

1) New equipment - You can see equipment just being introduced for the
very first time. Many manufacturers introduce their uncoming line
at Dayton.

2) Organizations - Many different organizations are represented there.
Not only amateur radio organizations, but I've also met people from
professional organizations (ie. electrical engineering, ect.)

3) Literature - You can gather literally LOADS of literature ranging
from how-to subjects to specs on equipment you may wish to save
for.

4) Flea Market - If you're like what I used to be like, you might
occasionally borrow money from your parents to get certain pieces
of equipment. Dayton is the 'mother' of all flea markets! You
can actually go all three days, and not completely see everything.
Also, if you're looking for something in particular, you can save
a few dollars buy looking around there. This is a place I refer
to, when I tell people that one can get on the air for under $100.
It *is* out there!

Going there, is one of the best hamvention experiences I have had in my life.
If you get to go, you won't regret it. Unless you do what I did one year,
and forget you billfold. I must admit, I couldn't do much on the $5 I had
in my pocket. HI.

A few months ago, there were some newspaper reports here in Denver
that the Denver Police were having strange problems with their new
robo-blimps (Chevy Caprices?).

Seems that the officers were complaining about unexpected behavior
of the ABS. In fact, I think there was an accident due to brake
problems. I remember GM saying the police just needed to learn how
to use the brakes...

Now I'm wondering if the police radios might have zapped the ABS
computer chip and caused the malfunctions???

Looks like all public agencies with two-way radios need to test all
vehicles before putting them on their purchasing bid list.

Regards, Bill.

SB DX @ ALLBBS $RTDX0320
RTTY DX Notes 20 March
RTTY DX notes for week ending 20 March, 1992 (BID RTDX0320)

I want to start this week's bulletin wishing to VK2SG a prompt return
from the hospital and in the mean time a very happy birthday. There
is also good news on Tom (ex OD5NG). He is well in Durban, and in the
coming months should take his exams for a license.

The Clipperton operation is now over. They made almost 30,000 QSOs as
of March 13th. Many have been happy for new one on RTTY, but few
Europeans had their chance.

Our thanks this week go to I5ICY, I5IGQ, IK5AAX, IK1HSR, TG9VT, VK2SG,
VK2EG, JJ3VPY, ZS5S, WB2CJL, K4FJ, W2JGR and the Twin Cities DX Packet
Cluster Network, DJ3IW and the DB0SPC Central Europe DX Packet
Cluster. Thank you all for your loads of information. Sorry to say
that I could not use it all, but it was all very interesting, and I
have included the best of it.

185. FM radios for 9600 packet

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-21 15:37:40 UTC
From: julian@bongo.UUCP
Message-ID: <483@bongo.UUCP>
Source record: 291835
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.packet

I have been quietly searching for a good affordable radio for
9600 baud packet. There is currently the Tek radio. It costs about $150
and leaves much to be desired. Kantronics has a radio, that does OK but
the RX performs poorly in the madding RF environment of Greater
Disneyland.

The Riverside Fire dept runs 9600 baud packet. They also
finance some amateur nodes under the bogus "public service" banner -
Your tax dollars at work.

So I ended up talking to Mike Burton, N6KZB of Riverside Fire
Brigade about what radios to use. He said he had been using some
Kenwood models - the TK-710 and TK-810. But of course, these have
since been discontinued and replaced with "improved" models with
scanning and more LEDs. Yes, of course the price has gone up.

He said his radio of choice is now the Yeasu Vertex line. They
have models with 4 channels and 24 channels. These radios are true FM,
40 Watts and are available for low band and high band VHF as well
as UHF (6M, 2M, & 450 in hamspeak).

So I called his supplier who told me the following: He would
sell me the radios for $449 for the 4 channel model and $509 for the 24
channel model. He would supply the radio programmed to my choice of
freqs. Well silly me, I asked if I could reprogram them, was it just
a PROM change etc. He then claimed that the programming info was Yaesu
prorietary and he couldn't give it to me, but would be happy to do
it for it for $50.

This is crap. This is like a car dealer saying they won't
let me have service info, that only the dealership can change the spark
plugs.

So, does anyone have the programming info?

Does anyone have or know where I can get service docs?

Anyone know anywhere else I can buy these radios?

Back in the early days of FM repeaters on two metres, I can remember a
Vancouver BC repeater using 147.33 as the output and 146.58, I think, as
the input. What the hell, those were the rocks people had...

That's one way of looking at it. Or how's about everybody tellin' DEEEEETROIT
"Hey, here's your chance to show up the Japanese and do something right
for once!"

It doesn't take that much effort to RF proof something. Oh, I forgot.
Most of Detroit's engineers are yuppies who have no practical experience.

A little extra shielding here and there, some bypass caps and inductors
on the right lines. And BAM! Problem solved. If hams and radio techs
and others can solve RFI problems, Detroit can too, dammit!

Tom

Nope, the piece of paper they hand you at the code test (CSCE) is
your permanent access to the HF bands, as a result there is no not
anything sent to the FCC so there is no "pending" priveleges. Use
you unadorned existing call with pride.

Message-ID: <Mar.21.13.53.47.1992.25388@pilot.njin.net>
Source record: 291907

Here's a wierd one. Margy's radio cooked the other day. It's an FT470 and she put it into the charger (Novex clone of the Yaesu thing). The radio was turned off. A few minutes later we smell electronics burning coming from the battery charger/radio combination. Everything was very hot. The radio is deader than a door nail (I can't even get the dial light to light). The battery seems to be OK. We disassembled and checked the charger, and it seems to be OK and functioning normally (although, I think I'll charge my batteries with the wall charger for a while). There is a roasted resister inside (it looks like it dissappated a little more power than it was designed for), but it still has the right resistance. I peaked inside the radio, there don't seem to be any roasted parts inside.

Has anybody seen anything like this before?

192. Perseids: Meteor Storm 1992?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-21 19:49:42 UTC
From: peter@deimos.space.ualberta.ca
Message-ID: <1992Mar21.194942.14194@kakwa.ucs.ualberta.ca>
Source record: 291939
Cross-posted to: sci.astro,sci.space,rec.radio.amateur.misc,rec.radio.shortwave,sci.physics

It may be a bit early to start thinking of the Perseid meteor shower which is in August, but the possibility that the 1992 shower may be exceptionally strong makes it an event few will want to miss.

For those who have not been following developments on the Perseid front here is a short recap/update: the 1991 shower produced uncorrected rates (that is the actual number observed) of over 350/hr centered around Aug 12.66 UT in 1991 as first reported by Japanese visual meteor observers. This translates into Zenithal Hourly rates of about 500 (the number that would be seen by an average observer under skies in which stars of magnitude 6.5 are visible at the zenith and the radiant is directly overhead). The initial Japanese visual reports were quickly followed by an announcement by observers who saw the shower from the South of France that the outburst was still going on 6-10 hours later when darkness fell over Europe and they reported ZHR's of around 300. This European report has proven to be FALSE, the observers concerned have indicated that while they saw visual (uncorrected) rates of the order of 100/hr the ZHR corrections applied were too uncertain to give reliable results (by the observers own admission). Simply a case of someone jumping the gun without checking the whole facts.
Other groups in Europe also reported normal strong rates (characteristic of the usual Perseid peak) but nothing like what the Japanese had observed.

After the times of the outburst became known, radar records in Japan were examined and revealed that strong activity with unusual numbers of large particles had been recorded in accordance with Japanese visual reports. Since this time reports from observers in China and Siberia corroborate these observations and amateur radio operators in Europe and North America have indicated they picked up unusual activity near the time of the reported increased activity. Visual observations from Hawaii have indicated that Perseid activity was strong only a few hours before the outburst but not unusually so; it is now quite clear that the outburst was short, lasting on the order of 1-1.5 hours and strong.

The explanation for the activity is that the parent comet, P/Swift-Tuttle has had a period of closer to 130 years rather than 120 since its last return in 1862 and may be the same as a comet seen in 1737 by Kegler. If this is the case P/Swift-Tuttle may return in the course of the next 1-2 years and the Perseid outburst last year represents ejected material ahead of the comet. It is useful to note that strong activity (numbers are hard to attach to the levels as visual observations were not precise at the time) was also witnessed in 1861 and 1862 near the time of the last passage of the comet through perihelion. In particular the 1862 outburst was very strong so we may be in a similar situation this year. Despite all this optimism it is important to keep a bit of objectivity about the entire subject recognizing that the evidence at hand is

NOT conclusive as yet, merely suggestive. Hence the shower has a good chance of being strong this year, but unlike a solar eclipse this cannot be predicted with absolute certainty.

This caution made clear what are the prospects for 1992? Unfortunately, the moon is full right at the time of the shower this year so observations of fainter meteors will be severely hindered.But if the shower does produce bright meteors as in 1991 the show might still be well worth catching. The obvious question is when does that portion of the stream that produced the activity in 1991 collide with Earth in 1992? The answer is 22-23 UT on Aug 11, 1992. If the structure or filament which caused last years outburst is stable this is when we should see activity again. Unfortunately, (yet again) this favours Europe and the Western part of what used to be the USSR, while the last vestiges of daylight will still cover North America for several hours after this time. However, radio amateurs should be able to "watch" the event as the radiant will be above the horizon for most places. Also, it cannot be predicted how long activity might last, some great showers have lasted for many hours even days so it is possible North American observers will be witness to the display.

In any case there are so many "ifs" regarding the shower everyone should get outside on the night of Aug 11/12, 1992 for the possibility of a real show stopping meteor shower. Start making plans today!

>because your CSCE is the only thing you will receive unless you asked for a new
>callsign, and even then, the FCC will draw that callsign from the same pool that
>your original call was taken from.

I agree that one probably does not have to use a temporary identifier, but
disagree with a couple of the reasons. Yes, the FCC will not know if you are
a "code" or "no-code" tech, therefore the /KT seems redundant (according to
FCC records, he was and will be a Technician).

However, this has nothing to do with the fact that the callsign is drawn
from the same 1 x 3 pool. Remember, general-class licenses are also drawn
from the 1 x 3 pool, and you still need an /AG identifier upon passing the
general-class license exams until receiving the new license with your same
call sign.

But the new license with your same 1 x 3 call will say "General" in this
case. The code and no-code Tech licenses look exactly the same (i.e., they
both say "Technician."

Finally, you never HAVE to request a new call sign when upgrading. My husband
kept his Novice call through 3 upgrades because he liked it; and plenty of
other hams have done the same.

No. Since no new license is issued when a Technician passes the
5WPM test, no temporary suffix is required.

Fair Warning and Friendly Advice To Very Anxious and Excited People

---- ------- --- -------- ------ -- ---- ------- --- ------- ------
We are not responsible for any damage on your part. If you don't know
don't do it. Let someone with more experience do it.
------------------------------------------------------------------------------

Thank you for your interest. The Tandy HTX-100 Amateur Radio Transceiver is
a close cousin of the Uniden HR-2510 (Listed as the Amateur Radio Mode
HR- 2510 (UT-550B). HTX for Ham Tranceiver, HR for Ham Radio, UT for Uniden
Transceiver. We can assume the A suffix for the HTX-100.)

My first HF radio as a Novice was a HTX-100, so there was always a lingering
question as if the Tandy model was capable of similar capabilities. I had
spent many hours examining the mini-schematic diagram at the end of the manual.

This information was derived from the buying of a HR-2510 service manual
at the local hamfest. When I examined the PLL schematic, I realized that
I was looking at a prior generation of the same PLL circuit. It helped
to complete the purchase.

The Uniden HR-2510 microcontroller u1201 is a 46 pin Dual Inline Package.
On the diagnostic voltage table for the microcontroller, there are two pins
labeled (34)AMATEUR and (35)GND aside of each other. They are pulled to GROUND.

#34 will open TX/RX from 26.000 Mhz to 28.000 Mhz, #35 will open 29.7 to 30 Mhz.

On the schematic for the HTX-100, there are similar pins 28 and 29 on U1208
pulled up by a resistor pack to Vcc.

The Tandy model microcontroller is a surface-mount device and the pins on the
chips don't bend: they SNAP. The steel used on the pins are quite different.
```

Do not attempt to physically pull on the pins of the package.

Percy KF2AT wrote the mods for the HTX-100.
Use common sense, a grounded soldering iron, and enjoy the mods.

Adam Kb2Jpd

*Extended Frequency Coverage from 26.000 Mhz to 30.000 Mhz

-------- --------- -------- ---- ------ --- -- ------ ---

Thanks Percy for being the first one.

Remove bottom cover. With the radio upside down and display facing you remove the synthesizer board with the four screws, this is near the front of the radio.

This gives access to the small board underneath with the surface mount components on it. Locate the processor chip IC401 (UC-1208).Locate pins 28 and 29 which are on the right hand side of the chip and are 4th and 5th from the top. Note they are bridged with solder.

CAREFULLY cut the copper track NEXT to the pins. DO NOT attempt to unsolder the two pins form the board. Use a GROUNDED soldering iron. Locate the two rows of connector pins above the chip.

On the bottom row locate the last pin on the right. Verify with a VOM that this pin has + five volts. Solder a 10k (1/4 w) resistor between this pin and pins 28 and 29 on IC401.The synthesizer will now tune from 26.00 Mhz to 30 Mhz.

---

*Simple RF Wattage Enhancement to 35 Watts

With the radio in the same position as before, locate VR5 in the top left hand corner. This is the RF high power preset.

Lift and bend the wiper so that is is permanently disconnected form the track. Solder a 47k resistor (1/4 watt) between the wiper and the left hand side of the track.

This should increase the RF power output to around 35 watts but you will now not be able to trim the power output. The Low power trim will function as before.

Enhancement of Microphone Frequency Response

1) To increase average depth of modulation
-- -- ------------- ----- -- ----------
Remove top cover of the radio and with the display facing you and the radio upright locate IC3 (MJM45585) near the bottom right hand corner of the main large board.

Just to the right of this IC locate c75 (56 pf) and remove it. This will increase the gain of the microphone Preamp considerably but without overmodulation. If you find the compression excessive(i.e. background noise)

open the microphone and insert a 470 ohm resistor between the hot side of the mic insert and the input (white lead).

This will reduce the gain somewhat but will still give you much increased "talk power" (percy's words, not mine. Adam).

2) To increase audio response in the high mids
-- -- -------- ----- -------- -- --- ---- ----

This simple mod will recrease the audio response in TX in the 2 to 2.7 khz region giving higher articulation and move intelligibility under weak signal conditions.

Locate IC3 as before on the large main board and the radio positioned as before.

Locate a 5.6k and a 4.7k resistor just below IC3.
Solder a 0.015 mf (16v) capacitor between the left side of the 4.7k to the right side of the 5.6k resistor.

These two mods work together to give improved readability on SSB under DX conditions.

------ -- ---

Percy, KF2AT, for taking the chance on his own radio, and wildly succeeding.
Jeff, N2LJA, for selling the radio to Percy and writing it off as a loss.
Tony, Kb2JYN, for being the test rabbit. May the rabbit rest in peace.

196. Observing artificial earth satellites ...sources

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-21 22:45:59 UTC
From: wats@scicom.AlphaCDC.COM
Message-ID: <20512@scicom.AlphaCDC.COM>
Source record: 291837
Cross-posted to: sci.space,sci.astro,sci.misc,rec.radio.amateur.misc,co.general

My mailer doesn't seem to be working.

For those who inquired about the postings concerning satellite identification,
the following may be of use:

While there are many programs which will calculate the times of satellite
visibility for your location (and other interesting stuff), the one I like
best is Quicksat written by Mike McCants for the PC. Whereas most others have neat
graphics capabilities and other goodies, Mike's will read a list of
two-line elements (up to 1000 objects) and compute local circumstances
for each satellite potentially visible in order of its
time of passage. If you are interested in only a few of the brighter ones,
such as Mir and the Shuttle, then the other programs will do. But if
you want everything passing by in a given period of time, Quicksat is for
you. Quicksat can be downloaded from T.S. Kelso's Celestial BBS at
1-513-427-0674.

With any satellite prediction software, one must have a list of current
two-line elements which uniquely determine the satellite orbit.
T.S. Kelso posts his list of some ~150 objects to sci.space and
rec.radio.amateur.misc about once a month. His list contains elements
for Mir and some of the larger objects suitable for optical observation
and many AMSATs which are small but are radio repeaters for HAM use.

Ted Molczan compiles a list of ~700 objects which includes just about
everthing potentially visible to the unaided eye, including the 10 by 4
meter Zenith rocket upper stages. Ted's list can be downloaded from
the Canadian Space Science BBS at 1-416-458-5907.

The Goddard Space Flight Center has, for years, sent out NASA Prediction
Bulletins containing two-line elements, a list of equator crossings
for a few days (mine always arrive too late for this to be of any use), and
a table for the reduction to other latitudes. You are restricted to
20 objects. If you are interested write to NASA, GSFC, Code 513,
Greenbelt, MD 20771. Recently Goddard has made elements available
electronically with their Orbital Information Group RBBS at
1-301-306-0010. One can select elements for a specific area of
interest: Weather Sats, Amateur Sats, Nav, Visible, High Interest (Mir,
Hubble, and modules attached to Mir), Geosyncs, and elements
for those cataloged within the last 30 days. You can also retrieve
specific objects by NORAD number.

I've been observing satellites since about the beginning of the space
age. It has been apparent since then that the computing power needed
to keep track in order to observe more than just a few objects was lacking.

No more. It's here.

Quite a bit can be can be gained by observing. I saw one of the early
Sputnik's booster rocket, both 30 meter Echo balloons, the Pageos balloon,
Skylab I as it grew brighter over the months and weeks as it's orbit
gradually decayed, and Salyut 7 doing the same thing. I've observed
the Space Shuttle twice and Hubble a number of times from this high
latitude on my southern horizon. Each low earth satellite has
a characteristic inclination, motion (corresponiding to it's height),
brightness, and variablity of brightness and sometimes color.
It may seem boring to some since they cannot be optically resolved
and look simply like moving stars, but it was a thrill to me to
see Mir's brightness increase as each module was added in the last
6 years.

Several commenters on this topic have suggested using ferrite loops as a compact RDF antenna for HF. While such can be effective on ground-wave signals, they are much less effective on skywave, particularly if the signal comes from a high angle (transmitter within a few hundred miles). An Adcock antenna (pair of vertical dipoles out of phase) is much better for skywave.

One problem with jammer hunting on HF is that the bad guy could be a continent away from you. Not exactly an evening's drive! The loop is only effective in ground wave range (maybe 10 miles tops). So even if the guy is in your metro area, he's hard to find if he's out of ground wave range, because you either won't hear him via skip, or else the incoming angle will be so high that the loop is useless.

So we need a network of LOTS of DFers scattered evenly everywhere. Any volunteers to organize it?

The Morehead State University Amateur Radio Club <MARC> will be conducting
all types of testing for Amateur Radio. The test will be held on
April 5, 1992 at the Morehead/Rowan D.E.S. Building on US 32 North of
Morehead <behind the Carl Perkins Building>. This is an open session.
If you are planning to attend to upgrade remember to bring your current
license and any current CESE's you may have.

Testing should begin at apx 9:30 AM EST.

If you plan to attend, Morehead Ky is located off I-64 <Kentucky>
between Lexington and Ashland, Ky. Exit 137

You can make contact on 146.910 - for further directions the day of the
test or E-Mail to

WRIGHT@morekyvm.BITNET or DULESE@morekypr.BITNET for further

Tim Wright
WRIGHT@morekyvm.BITNET
WRIGHT@morekypr.BITNET

To send a message to our BB mai to BB.MARC@morekypr.BITNET your test
dates are WELCOME here.

201. Sangean ATS 803 or 818?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-22 03:54:54 UTC
From: interpol@casbah.acns.nwu.edu
Message-ID: <1992Mar22.035454.6141@casbah.acns.nwu.edu>
Source record: 291927

Hi. I'm currently shopping around for a good SW receiver, and I think I've narrowed my list down to the above, the Sangean ATS 803A or the 818 (without the cassette recorder). The 818 looks really sharp, but since it's a new model, I haven't had any chance to read any reviews about it, or even get a price quote! Can anyone make any recommendations, or refer me to a place that sells these radios at a good price? So far, the best prices I've seen:

ATS 803 : $159
ATS 818 (with cassette) : $209
ATS 818 (w/o cassette) : $???

Any help would be appreciated...

I know a local ham who modified the programing software for the
Sabre to change the frequency segments around. And I believe he
has a Maxtrac and the programming software. So I think it's on
his list of things to do if not already butchered.

I'll check with him and post the response.

206. Middle Latitude Auroral Activity WATCH

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-22 05:10:22 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.701241022@honte>
Source record: 291831
Cross-posted to: sci.astro,sci.geo.meteorology,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

UPDATED: 04:30 UT, 22 MARCH

/\

HIGH RISK PERIOD: 24 - 25 March
MODERATE RISK PERIOD: 23 - 26 March (UT days)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE

POTENTIAL LUNAR INTERFERENCE: MODERATE

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR - GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN WASHINGTON STATE TO IDAHO TO MONTANA TO NORTHERN SOUTH
DAKOTA TO CENTRAL OR SOUTHERN MINNESOTA TO WISCONSIN TO CENTRAL OR
SOUTHERN MICHIGAN TO NEW YORK STATE TO SOUTHERN MAINE,
MASSACHUSETTS, AND/OR CONNECTICUT OR RHODE ISLAND.

SYNOPSIS...

An extension of a southern solar coronal hole to the near-equatorial
solar region will be well placed for producing an enhancement in levels of
auroral activity on 24 through about 26 March. The waning phase of the moon
during this period will provide optimal observing conditions after
approximately 2 am local time during this period. No significant auroral
storming is expected to accompany this event, although moderate levels of
activity can be expected over the northerly middle to high latitude regions.
Areas north of the U.S. / Canada border should be able to observe the
activity induced by this disturbance. The northern tier of the U.S. states
may also be able to observe activity, particularly before moonrise (near
approximately 2 am local time).

Activity is expected to peak on 24 or 25 March (with some preference for
25 March). At that time, moderate to possibly brief high levels of auroral
activity may be observed over much of the northern to central middle latitude
regions. Southerly middle latitudes and low latitude regions (ex. areas
approximately equatorward of 40 to 45 degrees north latitude) are less likely
to observe any activity, although there is a chance.

Auroral activity should stabilize and die down on 26 and 27 March.

This WATCH will remain active until 18:00 UT on 26 March, unless conditions warrant upgrading or cancelling the WATCH.

** End of Watch **

207. RACES Bulletin #214

2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.214 DATE: March 23, 1992
SUBJECT: MGT - Teamwork
(The following is from the Santa Barbara Amateur Radio Club.)
There were several comments about ARES [at our board
meeting], one of which was that the structure is too rigid or
militaristic. I feel that some of you need to look just a little
further into the subject. The management format that is now
being used by us is also being used by every sheriff'sdepartment,
every fire department, the State Office of Emergency Services,
the city and county of Santa Barbara, the Red Cross, and most
everybody else that has anything to do with disaster services in
the State of California. It is called the Incident Command
System (ICS). It was developed by several fire departments in
California just for the purpose of dealing with disasters large
and small. The plan works and has been proven by a lot of people
besides ourselves. Give the system a chance and you will find
that it will work for us, too.
Speaking of ARES, those of you who went to the Search and
Rescue symposium at Vandenberg Air Force Base got your money's
worth. There were two very important points that came across.
First, that the money resources of a lot of the government
agencies we have all learned to depend on are rapidly shrinking.
Thus, they cannot always give the level of service that has been
available in the past. Recognizing this fact of life, these same
agencies are very glad to see all the volunteers like us out
there ready and willing to take up the slack when called upon to
do so. Two, there was a definite feeling of comradeship in the
group that was there. Although very diversified, the bottom line
was that all could and would work together for the best outcome
no matter what the problem or disaster demanded.

> >> the capability, you should offset your transmit frequency to
> >> compensate for doppler shift.

> > Can anyone explain what frequency I should transmit on to account
> > for Doppler? Can it be done from an HT?

When the shuttle is approaching you, the frequency you receive will be higher than their transmit frequency. So instead of receiving 145.550, you will be receiving them as high as 145.5535, about 3.5 Khz high. At the same time, you should transmit about 3.5 Khz LOW, at 144.9465 so they will hear you on 144.950. 3.5 Khz is the maximum doppler shift for the Shuttle and as they get closer to you it will decrease to 0 and then reverse as they move away from you.

The best way to actually compensate is to use a rig with dual VFO's and set it for split frequency operation. Set VFO A to transmit 144.947 and set VFO B for recieve at 145.553. When they get closer (use a sat tracking program that tells you how much doppler) bump up the transmit freq in 1 Khz steps (or even 100 hz steps) and bump down the receive freq the same amount. At closest approach for a pass, doppler is zero, then reverses as they recede. (You can also it with one VFO and an RIT adjustment, or preprogram 10 memories, one for each minute of the pass)

It is more important to adjust your xmit frequency than your recieve. The Motorola HT on the Shuttle has a passband only 6 Khz (+/- 3 Khz) wide! So if they are listening on 144.950 and doppler puts you at 144.953, half your signal is outside the passband and your audio is distorted (if it gets thru).

> o Should I factor in the parameters describing a particular orbit,
> or will the shift be pretty much the same for all passes?

All depends on how accurate you want to be, I modified a tracking program to display the doppler continously during the pass. I think using an average shift (such as in the table below) for all passes is better than not shifting at all, but not as good as knowing the exact shift for each moment of particular pass.

The maximum shift occurs when they just come over the horizon and just before they disappear of the horizon. The higher the elevation of the pass the higher the maximum shift is. A direct overhead pass has a maximum shift

of about 3.5 Khz, a pass that only gets up to 20 degrees or so will have a slightly lower maximum shift, about 3.1 Khz.

> o If my rig will only tune in 5 kHz steps, should I even attempt to
> compensate for Doppler?

If the doppler is 3.4 Khz, shifting by 5 makes you off by 1.6 Khz instead of 3.4 Khz. When the doppler is 2.5 or less though it is of no use. It might make the difference, and can't hurt (unless you shift the wrong way :-)

Don't forget to keep checking your doppler shift during the pass.
Especially near the middle of the pass, where it changes rapidly.

I've probably said more than enough but just to make sure it's clear here's a chart for a typical pass:

Time Doppler Transmit Receive
AOS +3.4 144.9466 145.5534
AOS+1 +3.3 144.9467 145.5533
AOS+2 +3.2 144.9468 145.5532
AOS+3 +2.5 144.9475 145.5525
Closest 0.0 144.9500 145.5500
LOS-3 -2.5 144.9525 145.5475
LOS-2 -3.2 144.9532 145.5468
LOS-1 -3.3 144.9533 145.5467
LOS -3.4 144.9534 145.5466

Note that your transmit frequency is always going up, while your receive is always going down. One final note, if your tracking program doesn't supply the doppler shift and you don't want to compute it, don't worry about it, most people get thru without doing anything for doppler.

Good luck!

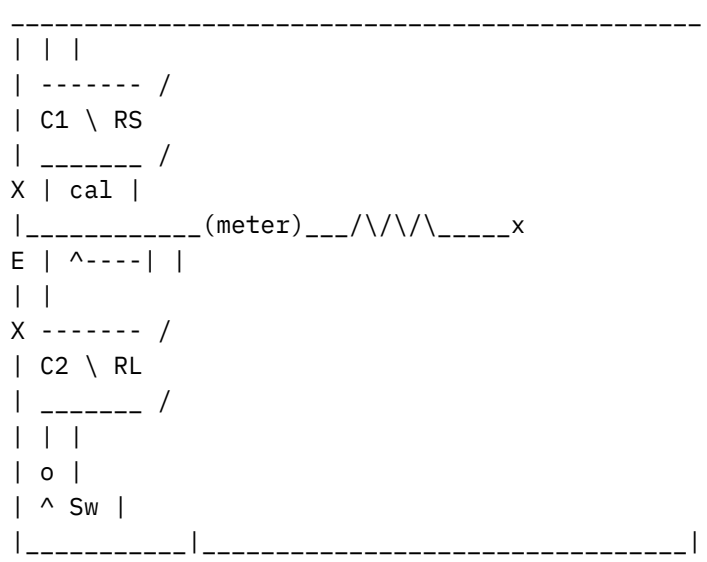
Very good explanation of classic monimatch VSWR meters. Now let's talk
about some of the meters that don't work that way. The most common
commerical meter that doesn't use the monimatch circuit is the Micromatch(tm).
It looks like this:



E is the generator voltage. RL is the load. The ratio RL/RS is made very
high so that RS dissipates very little power. To balance the bridge, the
ratio of C1/C2 is the same as RS/RL. Even if the line is not properly
matched, the bridge will still be balanced for power travelling outward
on the line, since the outward-going power sees only the Zo of the line
until it reaches the load. However power reflected back from the load
does not "see" a bridge circuit and the reflected voltage registers on
the voltmeter. To display VSWR, C2 is opened and the cal pot adjusted
to read full scale. This represents the outgoing wave voltage. Then
the circuit is closed and VSWR is read directly from the scale on the
meter.

These meters are in very common use, though the circuit is usually drawn
slightly differently, and they lie frequently. Since the complex impedance
that appears at RL in the unmatched case can be any value, the simple minded
scale calibration can seriously mislead the user.

At VHF/UHF, circuit strays will distort bridge balance. This can be a problem with monimatch circuits too. A necessary test of any monimatch meter is to reverse it's connections and see if you get the same readings. If you don't, the meter is lying to you. It may be lying anyway, but at least it will lie consistently if it works the same in both directions. Unfortunately, you can't reverse a micromatch meter.

213. Source for HT ext mikes w/antenna

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-22 14:53:24 UTC
From: andy@access.digex.com
Message-ID: <1992Mar22.145324.16606@access.digex.com>
Source record: 291845

Clipping an HT to your belt is a great way to carry it around, but its proximity to your body precludes reception from weaker stations and repeaters. Fine for hamfest communications, but otherwise its not very effective. The cops seem to have external mikes containing rubber duckie antennas. Clipping the mike to your lapel keeps the antenna up high and vastly improves reception. Why can't we have the same thing? Maybe there is a source for these mikes...do you know of any???

214. Re: Wanted: Realistic HT mod

>
>Does anyone know if there's a mod available for this HT to receive outside
>the ham band?

From a statement by Radio Shack posted here when the unit was releaased,
it seems the unit was delibrately designed *not* to have wide receive
coverage so that it could be made more resistant to intermod and spurious
out of band signals. This is a Good Thing(tm) since most of the wideband
Japanese HTs suffer from horrible intermod in strong signal areas like
the downtowns of most large cities. If you're looking for a commercial
band scanner, Radio Shack will sell you one of those too, but expect it
to howl like a Japanese HT when you're downtown.

I know that the Alpha Delta SWL sloper antenna CAN be used as a transmit antenna "With a tunner" according to the papers that came with it, but has anybody ever done this? How was performance? Did you ground the non-sloping half of the antenna? Any other thoughts?

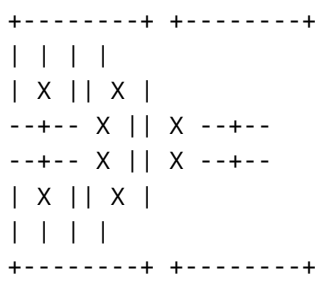
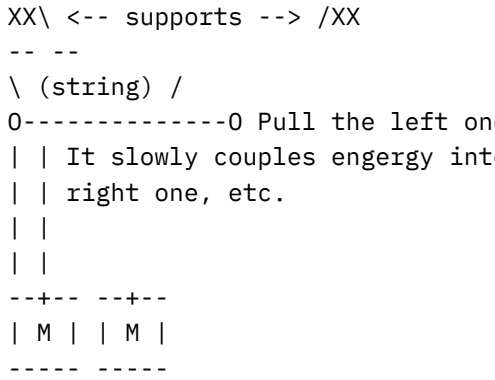
A transformer will do this:



This is an example of "coupled harmonic oscillators" in which the
initial energy (all on the left, say) will slosh over to the right and
back. If coupling is unity, this occurs in one cycle. But it will
occur even if the coupling is very loose; it just takes longer. Your
1% requirement demands high Q and tight coupling.

You can try this in your own home with a mechanical analog: two
pendulums coupled through a loose support, e.g.



Here endeth the lesson (Physics 101)

Our club is getting our new TS-450sat this week and are now considering upgrading our present VHF rig (An ICOM 255 mobile, or something along those lines) to a TS-790. However it would involve a great deal of fund raising and we are wondering if it is worth it. Our club was into Satellite a bit back in the days when we had a Ten-Tec omni with the good ole analog VFO Transverter (not!) but hope to get more involved.

Does anyone around have one they would care to comment about?

Thanks

I have seen speaker-mikes with BNCs on the top for an antenna advertised in a catalog from Periphex. (The battery folks.) It also apparently includes a touch-tone pad! And it does have a coiled cord. (At least the one in the picture does...) $49. Hey, why didn't I ever buy one of these?

Periphex can be reached at +1 800 634 8132 or +1 203 264 3985. Fax at +1 203 262 6943. I might also mention that Periphex is owned and staffed entirely by amateurs.

I speak only as a satisfied customer of and user of Periphex's battery packs.

+I've been using my ICOM W2A
+with a larsen magmount, plus the recommended ICOM cigarette lighter
+attachment (don't remember the model number). The radio works fine
+on 2Meters, but doesn't work worth beans on 440 when the engine is
+running. If I stop the engine (or disconnect the AC adapter), the
+radio works fine on both bands. I haven't tried measuring power or
+SWR to the antenna since I determined this was a problem.

+I get the same symptom in my 1985 Tercel Wagon, and in my 1988 4-Runner.

+Any ideas,

Yes. I have two friends with ICOM dual-band rigs and both have
the same symptoms. One has a W2A like you do and the other one
has a 32AT.

Try turning down your transmit power on 440. My friends do that and all
of the sudden their radios work again.

[their swr is fine in both cases]

I saw something REALLY hilarious today in a "new age" bookstore in my neighborhood here in Seattle. It was a book called "THE ENERGY GRID 1990 - Harmonic 695 - The Pulse of the Universe" by Bruce Cathie. In it, Mr. Cathie describes how he figured out that there was a pattern to UFO sightings when he plotted them on a map. He theorized that the UFOs were kept aloft by some sort of anti-gravitational force at the intersection of some energy lines that become obvious when viewing his map.

The really funny thing was that he went to the locations where these map lines converged, and found some other-worldly structures. He believes that these strange structures beam energy to the UFOs. In reading his descriptions, I realized that he was observing an HF cubical quad antenna used by ham radio operators!

He eventually found out that hams lived at each of these locations where he found the antennas, but believes that ham operators are involved in some giant UFO conspiracy! He also does not believe that amateur radio operators are capable of constructing such advanced antennas without the help of ALIENS!

His further research uncovered HF Yagi antennas, and all sorts of other wonderful things. His encounters with hams were interesting too. He seemed to regard them as strange and possibly from other planets!

I wonder what this guy would think if he ever travelled to the annual Dayton Hamvention? Come to think of it, isn't DAYTON near the WRIGHT PATTERSON AIR FORCE BASE where the tabloids claim the SPACE ALIEN BODIES captured in NEW MEXICO in 1949 are stored?

I knew there was something very strange about my hobby!

Just connect them through a high-Q inductor. The current will start
to oscillate. Disconnect the inductor just at the time where
the voltage reaches its first maximum across the second capacitor.

Intuitively, it seems like a Q or about 100 would give 1% power
loss, but I'm too lazy to calculate it out.

Hello Old Timers!

I am currently compiling an article about old time DXpeditioner Gus Browning, W4BPD, who died in August 1990, aged 82. According to his own statement, Gus has visited 168 DXCC countries and made approximately 600,000 QSOs in the years 1962-1971.

I have collected some material and talked to some of the local DXers who have been around for a little longer than I. I looked through old QSTs from 1961-1970 and I received a very detailed listing of callsigns and operating dates from Geoff Watts, ex-editor of RSGB's DX News Sheet. Still, a number of details are missing from the picture.

I would like to get in contact with anyone who is able and willing to help me in finding out the whole story. Maybe you have some old DX bulletins at hand or some QSLs? Any pointers to other publications where Gus was mentioned would be much apreciated. I also need photos from Gus. All I have are photocopies of the old QST pages and the quality is, of course, not acceptable.

So, whatever you have, I would like to hear from you!

And when you meet people trying to sell things, always enquire about RF immunity and related matters, ESPECIALLY if these people are from the manufacturer and not just an agency. Why not go to a Nissan stand at a motor show to discuss toyota's ban. Visit some show homes and enquire about restrictive terms in the deeds - Give the impression that sales are being lost!

227. Re: A (long) look at SWR & directional pwr mtrs

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-23 11:54:04 UTC

Message-ID: <16610116@hpqmola.sqf.hp.com>
Source record: 291854

One nuisance with the coupled line directional power meters is that although th lines may be very small fractions of a wavelength, the coupling factor will still be a funcion of their length in wavelengths, and so power scales would be frequency dependant, and sensitivity would be low. They are certainly excellent for covering single VHF and UHF bands, But the extent of 1.8 to 30MHz in octaves makes other approaches more attractive. Note that the Bird HF elements are for high power ranges, I wonder if they use a non-flat network before the detector to compensate for the non-flat coupling ?

I looked seriously at the series transformer+ capacitive voltage tap system which is usually attributed to Bruene of Collins, and found the capacitive tap to be a limiting factor. At low freqs it gives a large source impedance and makes detectors more difficult, at high freqs it shunts the line. I put together a simple system with a 2-transformer hybrid coupler and got better than 0.1 dB non flatness of coupling factor over topband to 6 metres, the coupling factor error measured at the RF outputs of the hybrid were within <.2 dB of calculated values. Directivity was better than 25 dB. All without any adjustments ! I found no mention of such a directional power meter in any amateur publication, yet it uses a very well known circuit and 2 ordinary diode detectors. (I've since found a version in Sabin and Schoenike) The Z0 value is set by the load resistors on the 2 "sample ports"
of the hybrid. Hundreds have now been built by QRPers with good reports.
The coupling factor is set by turns ratio, and Z0 is set by 2 resistors, so it just works as built, no adjustments needed, and gives reasonable accuracy. It isn't appropriate to VHF-UHF, and I can claim no originality, but it is a far better technique at HF than the usual meters that I'm surprised it has been overlooked in amateur circles (Oh yes, when published some of the text and my callsign got garbled)

Cheers
David GM4ZNX

228. DX Bulletin

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 054 (OPDX.054)
March 23, 1992
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, K4CEF & Southeastern Cluster Group, K6PBT & NoCal/Nev DX Packet Spotting Network, KE2LJ, WK3N, W6BSY, W8GMH, W8XD, W0CG and UV3AAC for the following DX information.

ARCTIC DXPEDITION. Dmitrij, UV3AAC, wants to inform everyone that there will be a joint radio DXpedition on one of the islands from Severnaya Zemlya archipelago, March 20th thru May 15th. Active callsigns will be 4K4/EK0AAC, EK0BP and 4K4/UA3ADR. A special award will be available. QSL to: P. Box 73, Moscow, 103051, Russia.

5Y, KENYA. Paul, 5Z4FO, who has been active on 15 meters SSB, mentioned that he will operate the CQ WW WPX Contest, March 28 to 29, as 5Y4FO. This will be of interest to prefix hunters.

D2, QSL UPDATE. Jay, W6GO (from the W6GO/K6HHD QSL Manager's List), received his D2ACA QSL cards with a note from Nick, RT5UY, advising that there is new a QSL route for D2ACA. QSL to: P.O. Box 453, Kiev, 254107 Ukraine, CIS.

EP, IRAN. There has been great news for DXers with the ARRL DXCC Desk announcing the acceptance of EP/HA5BUS operation for DXCC credit. This week there was activity by EP2MHB on the 14236 DX Net starting around 0200z. It was mentioned this station has not been accepted yet for DXCC credit.

FO, FIJI ISLANDS. Walter, DJ0FX, is active from Tahiti as FO0PT, and he will be there until April 3rd.

PY0T, TRINDADE. PY0TY should be active until the end of the month. He has been heard on 15 meters CW (sending slow) around 0145 to 0330z. The operator is supposedly PY1CFN.

S2, BANGLADESH. It was reported during the week that the HA5BUS group had crossed over the boarder into Bangladesh without having to pay the large duty on their equipment . Keep Your Fingers Crossed! (KYFC!)

S9, SAO TOME. Sigi, S92IJ, has been showing up around 1400z on 28490 kHz. QSL via DJ5IO. Also remember that Eric, SM0AGD, and Jan, SM0DJZ

will be active from here April 1st to the 8th, as S92AGD and S92SM.
Their activity should be all bands and modes. QSL via SM0AGD.

V6, MICRONESIA. AL, WA6BXS, will operate for a brief period as V63SA
from March 26th to the 27th. Look for V63SA between 28480 and 28600 kHz
running QRP. Al will also operate before this, if able, as WA6BXS/KH0
from March 24th to the 25th on 10 meters.

VP8, SOUTH SANDWICH ISLANDS. VP8SSI became active March 21st around
2340z on 14195 kHz. There was word that part of the group received a free
bath while attempting to land ashore. No one was hurt and no equipment
was lost.

XX, MACAO AND THE COLVINS. Iris, now signing XX9TQL, was heard working
the west coast last weekend around 28470 from 2300 until 0100z. She has
also been on 14188 kHz (listening up) around 1200z. Lloyd and Iris will
leave Macao on March 30th and will return home to San Francisco arriving
April 2. Due to an unavoidable delay, the QSL cards for XW1QL, V85KGP
and XX9TQL will not be going out from YASME until about the end of
April. Please be patient and do not send second cards.
XX9AS has has also been active on 10 meters. Check 28380 kHz around
0130z. QSL via N6LVY.

YA, AFGANISTAN. YA5MM is now QRT as of late March 21st. Last spot on the
Ohio/Penn DX Network was March 21st at 0638z on 18072 kHz.

ZL8, KERMADEC. Bob, ZL4DO, was on the island for a communication survey
for about 24 hours. During this time he was able to be active as ZL8RS
from 0500z March 21st to 0330z on March 22nd. He gave a few DXers a new
one for the log with activity on 10, 15 and 20 meter SSB. QSL via ZL4DO.

Check out the activity on 30, 17, and 12 meters

>>[re 1/4 wave] should I just use this?
>>or do I need to try to work on building another antenna REALLY fast?

actually, I now have a 5 element beam that I tossed together Saturday afternoon. this should help a bit, even though it will be stuck inside.

>From experience with earlier Shuttle missions, I can say that you'll
>need about 20 kW ERP to insure being heard by the Shuttle
>[....] but you're likely to be
>one of hundreds, probably thousands, of stations in the footprint of
>the Shuttle who are calling. The odds of your being heard are slim.

sounds like a DX pileup to me....and I have broken through those in the past with LOTS of major factors working against me.... also, I figure a lot of those thousands will probably be sitting there, like me, running around 45 Watts into a small beam. challenge? yes. patience required? probably a lot of it.... worth losing lots of sleep if necessary to catch passes? YES! ..... if and when the shuttle launches after being scrubbed this morning, you can bet that I'll be spending every minute I can trying for it!

regarding another question I asked:

>>'nother question --- since there is some packet activity on 144.95 (this
>>is one of the main frequencies here in chicago), has anyone figured out how
>>to avoid interference?

I found out last night that every one of the uplink frequencies has packet on it around here (although the other 2 are much weaker sigs...probably pretty distant).....can anyone in the Chicago area please tell me which of these packet frequencies (if not all of them) is going to be used locally for working the shuttle...if and when it actually launches?

thanks,
--jim

Motorola. :-)

You can also get duck mounts that clip to your hat. A friend of mine bought one of these at Dayton. Aside from frying his brain, he walked between two parked cars and snagged the cable on a mirror. The clip came off the hat, grabbed a handful of his hair, and ripped it out. Since he didn't have all that much hair to begin with, he got rid of the thing.

To those of you who chase DX, KA3HMS expects to be
operating from Johnston Island on or about April 6th to 17th
and from Wake Island on or about April 22nd to 25th. I believe
he'll be on 10 and/or 20 meters at various times.

I bought a Fisher-Price 6-meter repeater last summer at a yard sale.
It cost me $8. It's a baby nursery monitor on 49.83 MHz F3E.

I have found a couplep of uses around the hamshack. When I log into
the Indiana Traffic Net at 8:30 am EST and again at 6 pm EST I se
the transmitter in front of the speaker and carry the rcvr around
the house. This way I can monitor the activities of the net without
having to be in the shack.

Also when not using the Knwd TS-690 for other things, I either minitor
50.125 MHz or scan the 6-m band. I use the F-P "6-m rptr" in the same
way.

No. I've never tried connecting it to an outside antenna for dx!

I also use it to monitor my baby granddaughter when she visits. That
idea came much later than the ones above.

I bet hams who are creative thinkers can come up with many other
applications. (BTW: These little units work pretty good!)

Message-ID: <55801.pjml@[139.166.140.1]>
Source record: 291863

An interesting sideline to the problem of LO passthru in mixers came to my attention recently; i had been elmering a local SWL with his building of a direct-conversion receiver for 20 meters. This receiver used a high level mixer (SRA-1) and a two-stage gang-tuned preselector frontend.
About a week after he had built the RX, and i had helped him align it, i was listening on 20 meters when i heard what i took to be a VFO-swisher... but *very* strong! It then parked itself on top of some choice DX.
Eventually i worked out what was going on.... the DC RX was radiating a fat signal...
Looking at the design of the DC RX, we realised that there was effectively no selectivity between the VFO and antenna terminals except for the balance of the balanced mixer. Since we were brewing up about 40 milliwatts of LO signal, obviously the odd milliwatt was leaking out the wrong way.... and the input preselector, being tuned to the same frequency as the VFO, was doing nothing to block the radiation, so it went straight up the antenna feeder to be radiated in the usual way....
Any selectivity fitted in the antenna circuit to stop the LO going out will, of course, stop the desired signal coming in too. The eventual solution we developed was to use a single grounded-gate FET stage as a buffer between the antenna and mixer; it provides insignificant forward gain, but a very significant amount of isolation to RF going 'the wrong way'.

Maybe mixer-leakage of DC receivers accounts for more of the 'swishers'?
In any case, it just goes to show how far a QRP signal could go; in my case the SWL lives about 1/2 mile away....

I recently picked up a Heath HW 4 LX 440 Mhz handie. After looking at the manual, I realized that there was one key on the handie that wasn't documented in the manual.

Does anyone know what the CALL key does, and how to set it?

Also, I would be interested in any mods for the radio and sources for batteries and cases (perhaps a store has bought out the last supplies from Heath.

Thanks for any info.

242. RE: RFD rec.radio.amateur.public-service

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-23 17:13:50 UTC
From: ppddgc@uwovax.uwo.ca
Message-ID: <1992Mar23.121350.1079@uwovax.uwo.ca>
Source record: 291869

I strongly support the idea of establishing REC.RADIO.AMATEUR.PUBLIC-SERVICE.

Those of us involved in ARES, CANWARN (SKYWARN), CASARA (CAP) need a forum to discuss the issues specifically related to these public service situations.

The rec.radio.amateur.misc group just has too much traffic in it to be able to easily pick out related topics.

Amateur radio assistance in many situations must adapt to the changes that have occurred in technology. Cellular phones, satelite communications, etc. have impacted on our role.

We are locally examining our role and hope to be able to exchange ideas electronically with others throughout the world.

I hope you folks out there will send a note supporting this group. I think be a great way to generate some interesting discussion.

>has a 32AT.

Since I'm the guy with the 32AT, I'll comment on this. I find that it doesn't
happen on all cars. The car it specifically did happen on was a 1977 Honda
Civic. It didn't happen on a 1987 Range Rover, nor on a 1966 Ford Mustang.
I don't think it happened in Andy's old Volvo either. My conclusion would
be that its some component in the cig lighter circuit thats limiting
current. The guy with the W2A has a 1986 Ford Bronco II, which this happens
on, and a 1989 Toyota Corolla that it doesn't.

249. Attic Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-23 18:22:16 UTC
From: cjackso@uswnvg.UUCP
Message-ID: <1950@uswnvg.UUCP>
Source record: 291875
Cross-posted to: uswestnv.radio,rec.radio.amateur.misc

I have a problem that I'm sure others have faced....

I live in a community with covenants against ANY sort of outdoor antenna (although I do have a full wave 2m 'flagpole'). I've just started to try to work HF, and am trying to make do with an antenna in the attic.

Our attic space is just under 6' high and I have about 25' of clear space in one direction. I've currently got a fan dipole with elements cut for 1/4 wave (on each side of the insulator) for 10M and 15M. It's fed with about 50' of RG8 and a TenTec tuner. I've made no attempt (yet) to trim the dipole - without the tuner the SWR reads about 6:1, with the tuner I've been able to get 1.1:1 on the Novice subbands on 10M and 40M.

The antenna seems to receive pretty well, although it DOES exhibit some loss of sensitivity to stations off the ends and/or the part of the dipole that sits under our solar collector.

However, on transmit, I've only been able to make local contacts (on 10 voice - no luck at ALL on 40 CW). All of the contacts I've made tell me that I have a great deal of RF feedback in my signal - I'm no surprised - if I try to run anything over about 40W, I have ALL sorts of RFI problems.

Anyway - I'm looking for solutions, either an antenna that will fit in the space I have, or a 'stealth' antenna that I can put up outside. Two I've looked at are the 'flagpole' vertical in the '89 Handbook, and a 10/40 loop I found in one of Doug DeMaw's books.

I'd also appreciate any references people might have found handy.

Thanks in advance!

I never heard about this conspiracy. How can I get in on it? Are there
any aliens who would be willing to let me borrow an rx noise bridge?
Come to think of it, how do we know that MFJ isn't run by aliens? Certainly
the quality of their construction is shoddy enough to suspect that it may
have been assembled by beings lacking hands with opposable thumbs. And what
about Heathkit? So, where are the spacecraft landing and when will they be
bringing the next shipment of grid dip meters?

>His further research uncovered HF Yagi antennas, and all sorts of
>other wonderful things. His encounters with hams were interesting
>too. He seemed to regard them as strange and possibly from other
>planets!

Of course. How else could we explain CW? It's actually the native
method of communication for certain aliens, who are plotting to force
everyone to learn it in an attempt to ease their impending takeover.
First they require hams to learn it, next thing you know the code will
be a requirement for voting and then it will be an entrance requirement
for kindergarten. When will it stop?

Having never been to Dayton, I was wondering if there is any good way to get gear back home if you just take a commercial flight to Dayton rather than drive. Sure, all the little stuff can just be tossed in a box or bag and checked, but the thought of wrestling an Apache or other boat anchor around seems a bit much. Does UPS set up a shipping site at the hamfest, for example ? They do this at the SIGGRAPH conference for example so you can send proceedings, etc. back home easily.

Ha! Foolish Earthlings! At last I can reveal my true identity. For years I have masqueraded as N4PDY, mild-mannered ham radio operator. Now at last I can reveal my true identity; I am QrmZorg from the Planet Of Wishful Thinking New Age Authors. With help from my Alien brothers, I have constructed my all-powerful Qubical Quad Power Pyramid Energy Antenna, with which I beam psychic energy to UFOs and one-liners to Dennis Miller. You meer mortals are powerless to stop me!!! Yes, it is I who always calls "QRP" in dx pileups, I who designed the EMI suppression circuits in Toyotas, I who cause operators of closed repeaters to claim the frequency as their own, I who turned normal human beings into cretins who jam the maritime moble net on 14.313. You thought it was Wayne Green who raved on and on about incentive licensing??? Ha! I was planting those thoughts in his mind using my Quad antenna! Yes, it's already too late for you. Under my influence, the FCC took away the 11 meter band and gave it to CBers! Tomorrow, 20 meters! The invasion fleet is already on its way, homing in on my Quad antenna. It's only a matter of time until the Invasion Of The CB Aliens!!!!!!!!

I heard an unconfirmed rumor over the weekend that the Radio Shack HTX-202
had been recalled for some reason. Can anyone here confirm this (I know
there are R.S. employees on this net)?

>Yes. I have two friends with ICOM dual-band rigs and both have
>the same symptoms. One has a W2A like you do and the other one

This is weird.. I have an IC-W2E, and so far I haven't had a
slightest problem on either band. I've used both high and low
power on both bands, but the radio works just as well as one
might it work inside a car. My car is a Fiat Regata 85, but
somehow I don't think the problem is car-dependent.

Btw, I have a friend who has detected a problem with a
Standard 2 m rig when used in his car - the radio works just
fine, but the electric system of the car begins behaving
oddly.. his car is a Lada..

261. Antenna for 2M and VHF Marine?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-23 20:21:05 UTC
From: ayscue@scivax.stsci.edu
Message-ID: <1992Mar23.162105.1@scivax.stsci.edu>
Source record: 291737

I have an antenna question that I'm hoping someone has advice on.

I would like to be able to operate my 2m HT from the same antenna that I would use for a marine VHF rig on a small sailboat that I own. The obvious advantage for the HT is that it would be operating into an antenna 25' above the surface of the water.

Does anyone know of a vertical VHF antenna that is sufficiently broadbanded (146-162 MHZ), OR does anyone know of an antenna tuner that would allow me to match the HT to a VHF marine antenna?

thanks for any help

Jon/KC3OU

262. Are NO Kenwood mods available?

Newsgroup: rec.radio.amateur.misc

From: mac@cis.ksu.edu
Message-ID: <mac.701382429@depot.cis.ksu.edu>
Source record: 291738

My local County Emergency Preparedness Director, who recently got
his ham license, has purchased a TH77A and would like to enable
expanded frequency coverage. After I posted a request to the net,
some kind soul sent me instructions on how to modify it and also
gave me the name of an ftp site from whence I obtained a whole bunch
of "mod" files (I wanted to double-check the instructions I had
already received). But after unzip'ing the ftp'd stuff I was VERY
surprised to find it contained absolutely NOTHING for Kenwood radios!

Surely there must be a mod database for Kenwood modifications SOMEWHERE!
Can someone please help me locate it?

264. AMSAT News???

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-23 21:04:21 UTC
From: vail@tegra.COM
Message-ID: <3159@atlas.tegra.COM>
Source record: 291740

First a kind of vague question:

What has been going on with AMSAT-NA and the publications? From what I understand a lot of people worldwide are dissatisfied with AMSAT-NA and handling of things like DOVE. Most of the problems seem to be miscommunication or lack of communication which is kind of ironic.

Then some minor whining:

Then the newsletter. The largest column seems to be the DX column. One of the things I like about satellites was the lack of contesting and "CQCQ5973CQCQ..." operating that has tarnished my enthusiasm for HF lately.

And a serious "what the hell?":

I realized early on that _Satellite_Operator_ was a mistake for me. Seems to be targeted for a different audience and the clueless letters printed confirmed that suspicion. Any useful info was already in the newsletter or on usenet weeks earlier.

Then the current issue had a really weird article linking the Viking "Face" on Mars to sunspots to crop rings. Is this serious? By the end of the article I wouldn't have been surpised to see Elvis or the Loch Ness monster involved. It it wasn't the April edition either.

The AMSAT tie-in seemd to be the suggestion that we reprogram our fax machines to recieve the next mars mission directly. HUH????

Is it just me or what?

From: john@anasaz
Message-ID: <1992Mar23.212553.16224@anasaz>
Source record: 291741

Keywords:

In article <9203201836.AA29507@helios.TN.CORNELL.EDU> kfeeney@helios.TN.CORNELL.EDU (Kevin Feeney) writes:
]A couple of nights ago the group of us working on the local SAREX effort got to
]wondering if it was possible to use the shuttle to bounce signals off off. I
]believe the shuttle is something like 120 ft by 80 ft by 40 ft, which is pretty
]large and compares well to the ECHO balloons (100 ft aluminized mylar) that

Okay, here goes.... assumption: shuttle is a 25% effective reflector.

There is a formula for this, but I'm gonna do it the old fashioned
way rather than looking it up...

In meters:

Slant Range up: 200Km 2 e+5
Area of sphere (4*pi*r*r) (raw path loss): 5 e+11
Area of shuttle: 9 e+2
Amount of signal intercepted by shuttle: 1.8 e-9 (-90 dB)
Assume 25% reflected in direction: 4.5 e-10 (-96 dB)
To receiver (add path loss: 5e11) 9 e-22 (-210 dB)

So, the total path loss is roughly 210 dB which you have to overcome.
This is for isotropic antennae.

Assume: Transmitter power 100 Watts +50 dBm
Transmit Gain Antenna 16 dB
Receive Gain Antenna 16 dB
Path Loss -210 dB

Signal at receiver: -128 dBm
Ideal Passband noise of 3KHz signal -139 dBM

SSB Signal to Noise Ratio +11 dB (ie, marginal)
FM Signal to Noise Ratio + 3.2 dB (ie, no good)

It looks to me like it might work. Of course, the radar cross section of
the shuttle is a complete wild guess here, so it could vary by 20 dB.

I first did this calculation when listening to the MIR spacecraft and
hearing signals that seemed to be coming from too far away.

>+SWR to the antenna since I determined this was a problem.

>+I get the same symptom in my 1985 Tercel Wagon, and in my 1988 4-Runner.

>+Any ideas,

I used to run the exact same setup. The problem is in the
Icom cigarette lighter. The unit will work on, but the PL tone
gets noisy when the engine is running and the unit in on high
power. If the repeater you are using does not require PL, then
you wont have any problems.

I fixed this problem by wiring the power cord directly instead of
using the icom cigarette lighter plug. I also added a noise filter
of my own. Never had a problem since. I still have the icom
adapter, but only use it if I'm going to be riding in someone
else's car, even then I usually take along my 7ah gell cell instead.

In rec.radio.amateur.misc, dstock@hpqmola.sqf.hp.com (David Stockton) writes:

of the hybrid. Hundreds have now been built by QRPers with good reports.
The coupling factor is set by turns ratio, and Z0 is set by 2 resistors, so it just works as built, no adjustments needed, and gives reasonable accuracy. It isn't appropriate to VHF-UHF, and I can claim no originality, but it is a far better technique at HF than the usual meters that I'm surprised it has been overlooked in amateur circles (Oh yes, when published some of the text and my callsign got garbled)

This is indeed a very useful coupler. I built one about 15 years ago, having been set on the idea by Bruce Donecker n6ct. With common core materials a 30 dB coupler from 160M through 100 MHz was very easy to build and it worked very well with no adjustment. I've been intrigued with the idea of using a coupler of this type, which has the benefit of two symmetric output ports, along with a simple vector detector to make an HF vector network analyzer.
It seems to me that the combination should be especially attractive for HF antenna work and should be a boon to RF construction for those presently limited to grid dip meters and similar.

Throwing in an RMS detector (now available in integrated form very reasonably) And it seems like a pretty good instrumentation at a very low price for amateur construction. Combined with a simple synthesized source/counter and a PC or something for processing and display and it seems like amateurs could have a signal source, network analyzer and directional power meter combination for HF which should be pretty useful. Combined with a circuit simulator this could be pretty cheap and yet very powerful.
I wonder if MFJ is listening.

269. Icom W2A Review [LONG]

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-23 23:59:47 UTC
From: james@netcom.com
Message-ID: <6j-j6vjames@netcom.com>
Source record: 291745

Using the Icom IC-W2A
Informal Comments by James L. Paul N6SIW

I've had my IC-W2A for a few weeks now, and have been using it for casual portable use. The W2A feature set is good for most types of common HT operation. I will comment on various features from my point of view as a new user of the W2A.

The W2A is a dual-band VHF/UHF HT that covers the 2m and 70cm amateur bands. Each band is controlled independently. A variety of options and accessories are available.

Display:
The display is a multi-function LCD positioned at the top front panel. It's actually two displays in one. The VHF band is on the left, and the UHF band is on the right. The display for each band is complete, and they are both the same size. Some other dual-band HTs show only partial information about the "sub-band", but the W2A favors both sides of the display equally. Contrast is good from a wide range of viewing angles, and best from above. Viewing from an extreme angle below, the display becomes fuzzy but still readable.
The frequency displays are about a quarter of an inch tall, and show five full digits. The sixth digit is a small "50" next to the fifth digit. This has become common in modern HTs, but I'd personally rather have a normal sixth digit.
Under each frequency display is a twelve segment strength meter display. However, only seven segments are active, unlike the S-meters in Icom's SAT series HTs. Segments are active for 1db, 3db, 5db, 7db, 9db, and then two more, presumably for +10db and +20db. During transmit, the meter shows the transmit power setting, of which there are four. It would have been nicer to have a display of battery strength during transmit instead, since the power setting can be easily checked and there is no method provided for checking the remaining battery life.
Indicators are available for duplex, tone encode/decode settings, memory channel, memory mode, and channel skipping. I find the indicators adequate and useful for common use.
The display may be lighted by pressing the "3" button on the keypad. The display remains lit for five seconds after pressing a button. Holding down the function button while turning on the light causes it to remain on continuously until it is explicitly turned off. The light is emitted from two green LEDs, one at each end of the display. The amount of light is sufficient for very dark places, but the display is very hard to see in dim lighting or dusk conditions. Contrast is reduced when the light is required to view the display.

A "MAIN" indicator appears above the band currently selected. This indicator is bold and easily seen, and is the only way to visually differentiate between the "main" band and the "sub" band. All control functions affect the "main" band, so this indicator is at the center of the W2A's operation.

Analog Controls:
The W2A has five analog controls, mounted on the top of the case. Each band has audio level and squelch controls, which are each coaxially mounted with the audio level on top. To match the VHF display on the left, the VHF band audio and squelch controls are at the far left. The UHF band controls are identical, and to the right of the VHF controls. The fifth analog control is rotary digital switch, located at the far right. This is available for rotary frequency input, and selecting configuration values.
These controls work well, but can be awkward for large fingers. The rotary switch is easy to use, but the VHF controls are very close to the antenna connector, and can be difficult to manipulate. The UHF controls are slightly easier to reach. Also, the lines molded into the controls to indicate settings are hard to see, making it difficult to check the settings of these controls at a glance. I find it impossible to see the squelch and audio settings in dim light.

Connectors:
The antenna connector is a standard BNC, at the top left rear of the case. This single connector is internally duplexed and connects easily to a dual-band antenna.
The external power connector is a two conductor coaxial type located next to the antenna connector. I have never seen this type of connector before. It resembles a standard coaxial power plug, but has a confusing gender. Each side of this connector is both male and female, and is hard to describe. It's sort of like one gender of a standard coaxial connector inside the other. I have no idea why Icom chose this connector, and I can't see any advantages over a standard coaxial power connector. Up to 16 volts DC can be applied to this connector, which can be used for full power operation and to charge a connected battery. When a power connector is plugged in, any connected battery is disconnected from powering the radio and charged as long as the power is supplied. It's possible to overcharge a battery by leaving external power connected for over 15 hours. If the external power is turned off without removing the connector, the radio will be without power. (You must disconnect the plug for the battery to work.)
There are two audio connectors, located next to the power connector, which are standard mini phone jacks. The left one is for VHF audio and the right one is for UHF audio. The microphone audio is on the VHF connector. The audio connectors function somewhat independently of each other, and can be used seperately. If the UHF audio connector is used, the internal dual-band audio mixing is disabled. The user manual has a chart describing the various combinations possible.
The bottom of the W2A has a battery connector that accepts Icom's

SAT series batteries. A BP-84 is supplied with the USA version, which supplies 1000mAH at 7.2 volts. I've been using the 600mAH BP-83 and BC-72 charger with very good results. This connector can accept up to 12 volts for full power operation. I've heard comments from other users that the "lips" that attach the battery to the bottom of the radio break easily if the rig is dropped. This slide connector system is used by the S,W, and SRA series Icom radios, and is simply a plastic railing that keeps the battery mechanically joined to the radio chassis. I haven't broken any of my batteries, but can see how it might be likely even in a light fall. Some of the "louder" commenters of this problem have had their damaged batteries replaced free by Icom. I doubt this is standard policy at Icom, but shows excellent support and service on their end.

Button Controls:
All the buttons on the W2A are on the front panel, except for the PTT and Function. (The Function button acts like a shift key.) The button arrangement on the front panel might take some getting used to. The most interesting thing here is that the Power switch is a front panel button. The radio is turned on and off by pressing this button for approximately one second. Most HTs have the power switch built into the audio level control, which makes it necessary to set the audio level each time you turn the radio on. I think the W2A power button is a nice feature.
The A,B,C, and D buttons are to the left of the numeric buttons, instead of to the right.
The two buttons that control band switching are enlarged and well placed. Nearly all the buttons are multi-purpose, and have secondary functions in conjunction with the Function button located just above the PTT button on the upper left side of the case. The buttons are small, but are spaced well and slightly recessed to prevent accidental presses. None of the buttons are lighted.
Other Icom HTs allow selecting the memory channel by pressing a numeric button. The W2A does not do this. Memories must be stepped through with the rotary control or Up/Down buttons. This makes the numeric buttons available for other operations without requiring use of the Function button. This results in more flexibility with one handed operation, and I think it's an improvement.

Ergonomics:
The W2A case is sculpted on the sides for easy gripping. The top mounted controls are a bit crowded, but functional. A wriststrap mount is on the upper right side of the case, but I can't imagine anyone dangling $600 worth of radio from their wrist. The LC-72 softcase is acceptable for preventing scratches that might accumulate during normal use. My softcase was poorly sewn, and "poofs" up around the top of the case, but I doubt this is a widespread problem.
The display area is slightly convex, which makes it extremely prone to scratches. The softcase helps, but it's difficult to get the case to slide over the display as the clear protective plastic tends to stick to the convex display. The display should have been made flat.

The supplied belt clip is small, but works well for me. The optional MB-22 alligator clip is less sturdy and very hard to open without pressing hard on the front panel. The MB-22 also moves the clip point too close to the W2A's center of gravity, making it easier for the radio to pivot sideways while on a belt. This can be either an advantage or disadvantage, depending on where you clip your rig.
The optional HS-60 headset is an interesting contraption. It's unwieldy, but very functional once it's set up. It's not something I can imagine being used casually, but is great for planned situations. The headset folds in two places and has two earphones, one for audio from each band. The earphones are the little walkman "earbud" type and fit like little foam hearing aids into the ears. They dangle on thin cables which tend to get tangled easily or caught on things unless you tape them up and out of the way. The microphone is a little foam ball on a really great boom. The boom is easy to move, and holds any position very well. Between the radio connector and the headset is a small control box with a swiveling lapel clip. This box has a VOX circuit, PTT switch, mode switch, and mic gain control. The whole setup isn't especially weatherproof, but shouldn't be hard to protect if needed.
The optional BC-72 fast charger is necessary for active use. I can't imagine getting along without it. (Waiting 15 hours to charge a single battery is, well, inconvenient at best.) This charger tops off the BP-82,83,84 batteries easily and fast. It's an intelligent charger and senses when the battery is fully charged. A fully discharged pack takes about an hour to charge, depending on the battery capacity. I've been using the same 3 batteries for 2 years with no significant loss of performance. The BC-72 can also operate from a cigarette lighter or other 12vdc source. I heartily recommend it to every W2A user.

Features:
Simultaneous Receive. This allows the reception of both bands at the same time. To turn this off, one band can be deactivated, making the W2A effectively a single-band radio.
Full Duplex. This allows transmitting on one band while receiving on the other. You can manually repeat one band to the other using this feature. If you are monitoring one band while talking on another, anything received on the sub band will be transmitted along with your voice, which can be very confusing to others. Also, between transmissions you may miss something during a QSO because of sudden activity on the other band, so try not to forget you have the other band on during a QSO. In the case where you are using a crossband repeater, you will experience serious feedback due to your transmitted audio being received on the other band simultaneously. This problem could have been avoided by adding a semi-duplex or half-duplex feature that would automatically mute the sub band receive audio during transmission. Icom acknowledges this problem, but says there will not be a fix for the W2A.
Extended Receive Range. This is an undocumented feature. By holding down the "3", "#", and "B" buttons while turning on the power, the

radio is set to allow entry of any frequency. After doing this, it's important to use the "Set" mode from both bands to change the number of digits used for keypad entry. (Use the SET mode for each band to set the "PL" value to 100.) This will allow any frequency to be directly entered. Not all frequencies are receivable, but each band retains reasonable sensitivity over a respectable range. This is something to be tried and experimented with by each W2A owner.
CrossBand Repeat. This is an undocumented feature. First enable the Extended Receive function mentioned above. Then set both bands the way you want them and make the VHF band the main band. Press Function-"2" and Function-"#" without releasing the Function button in between. This will lock the radio in an automatic crossband repeat mode. Again, something for each W2A owner to experiment with. To deactivate, press Function-"#".
Extended Transmit. This is an undocumented hardware modification, and beyond the scope of these comments.
Control Locking. The keypad and PTT can each be locked easily.
Tone Encoding. CTCSS (subaudible) (PL) and DTMF (TouchTone) available.
Tone Decoding. Uses CTCSS or DTMF tones to code lock the squelch. You can select a standard EIA CTCSS subaudible tone for locking your squelch, which is commonly referred to as "PLing" your HT. You can also use a DTMF sequence to lock your squelch, which means that the you only hear transmissions that begin with the proper 3 or 6 digit sequence. This feature is broken into two functions called paging and code squelch. It's possible to set up codes allowing flexible group and individual code sequences. These features seem identical to and compatible with the ones provided in the SAT series radios.
Memory. 33 memories per band total, including call channels.
Autodialer Memory. 4 DTMF memories up to 15 digits each. This feature is easy to use once you take the time to study it. It works best when you commonly use it for dialing only one sequence. Otherwise it might be easier to just dial manually if you remember the sequence. As a control operator, I'd like a lot more DTMF memories to store repeater control sequences. With only 4 memories, it's good for autopatch dialing but not much else in my case. The 2SAT and 4SAT
ed to. In the 1:4 mode
it's common to miss the first syllable or two of somebody's call sign. In the 1:16 mode it's possible to miss an entire call or transmission. On the repeater I monitor there's another active ham with a callsign ending in "W" and I'm repeater controller
or autopatch to decode properly.
Scanning. Lots of scan options. Even does programmable band edge scans like a regular scanner. Decent scan rate, but not fast.
Clock. Automatically turns the radio on or off at preset times. I really don't find this function useful.
Power Settings. 4 settings, but only 3 effective with a 7.2v battery. (The manual says only 2 with the battery, but my brief tests show otherwise.)
Power Saver. This feature has 3 modes. Off, 1:4, and 1:16. For use

with packet you need to turn this off. The 1:4 mode has the receiver off for half a second at a time, and in the 1:16 mode it's off for 2 seconds at a time. This works well, but if you haven't used this type of feature before it may take some getting used to. In the 1:4 mode it's common to miss the first syllable or two of somebody's call sign. In the 1:16 mode it's possible to miss an entire call or transmission. On the repeater I monitor there's another active ham with a callsign ending in "W" and I'm often left wondering if the call I just heard was directed to him or me. Fortunately, I'm already used to this. Lots of hams have become familiar with this type of energy saving feature and have learned to wait a moment before speaking. It's important to note that the frequency must be quiet for a short time before this mode kicks in. Once you've started a QSO the receiver stays on as long as there's activity on the frequency, so you don't miss syllables. Also, for obvious reasons, the power saver is disabled while scanning or using a coded squelch lock.

Testing:
I had the opportunity to test my W2A briefly with a service monitor. The VHF stack was only 100Hz off frequency at 146.55. The UHF was 300Hz off at 446.0. The DTMF deviation was 4KHz on both bands, and the microphone deviation with my voice peaked at 3 to 5KHz with my mouth right up against the radio. The output power was 0.3W, 0.6W, 1.5W, and 1.5W on settings of Lo1, Lo2, Lo3, and Hi, respectively on both bands. Receive sensitivity was very good, off the scale of the service monitor on both bands, with full quieting somewhere around 0.15uV. Sensitivity outside the amateur bands was also fairly good. Icom provided me with charts detailing the sensitivity of the W2A, and I'll provide estimates of their data points below:

Icom considers the VHF stack to be deaf above 1uV sensitivity.
Here are my estimates from examining the chart:

MHz uV
60 0.8
65 0.5
80 0.5
100 0.4
108 0.02
125 0.0
145 0.0
165 0.0
170 0.0
175 0.5
185 0.5
195 0.4
205 1.0
215 1.6
235 0.9
255 1.9
265 0.2

275 0.05
285 0.05
295 0.03
305 0.03
315 0.18
325 0.16
335 0.5
345 0.5
355 0.3
375 0.4
385 0.8

Icom considers the UHF stack to be deaf above 2uV sensitivity.
Here are my estimates from examining the chart:

MHz uV
326 0.4
370 0.8
410 1.5
440 0.2
451 1.8
465 1.8
500 2.3
690 1.5
730 1.5
770 1.7
810 1.8
850 0.6
890 0.4
930 0.6
970 3.0

Keep in mind that these values are just my visual estimates of the charts, and don't give an accurate accounting. The charts weren't completely linear in all places, so don't use this data for anything more than a quick ballpark estimate. My own testing showed different results, specifically that my UHF sensitivity in the 440 area was better than the chart shows. Your own mileage may vary!

I haven't had the opportunity to check selectivity, but haven't noticed any problems at all. I've heard comments from others about the Icom R1 receiver having poor selectivity, and some of the comments have said that the W2A is significantly more selective that the R1. This is the only comparison I've heard. I've heard a comment from one person who said his W2A had significant intermod problems on UHF and received cellular transmissions in the 450MHz band. I don't know the cause or outcome of his experience, but haven't heard of any similar occurances from others.

The flexible antenna provided with my USA version seems to work adequately, but I haven't tested the efficiency. In my experience all "rubber ducks" are about the same, but a few are exceptionally bad.

Since this one isn't in the "exceptionally bad" category, I haven't bothered to quantitatively test it.

These comments are my personal statements and observations, and are in no way connected with Icom America, Inc. The accuracy of my comments is not gospel, and much of what I've said is personal opinion. These comments are an honest attempt to convey reasonably objective remarks and impressions, and are directed to other W2A users and prospective users.

One UFO theorist, after plotting UFO sightings, concluded that since UFO sightings seem to be clustered along established air routes, UFOs are using FAA navigational aids for navigation. He concluded, though, that the aliens have figured out how to use omnis and VORs, but don't understand DME, so they're stuck with flying along airways, and can't do area navigation.

Of course, there may be other explainations as to why flying objects tend to be clustered along airways.

>

Yes, I am certain it makes no sense to use the /KT suffix, I just thought there might be a new suffix. Many replies I have received (thank you!) indicate this is not the case.

>However, this has nothing to do with the fact that the callsign is drawn
>from the same 1 x 3 pool. Remember, general-class licenses are also drawn
>from the 1 x 3 pool, and you still need an /AG identifier upon passing the

>But the new license with your same 1 x 3 call will say "General" in this
>case. The code and no-code Tech licenses look exactly the same (i.e., they
>both say "Technician."

My technician license was drawn from a 2 x 3 pool, not a 1 x 3. I believe that only *general* licenses here in Six-land are taken from a 1 x 3 pool.

>Finally, you never HAVE to request a new call sign when upgrading. My husband
>kept his Novice call through 3 upgrades because he liked it; and plenty of
>other hams have done the same.

I like my call sign fine, but it is easier to use a shorter call sign so I probably will request a new call in the case it would be a shorter one. Of course if my call actually spelled something neat, I'd be more tempted to keep it! (not trying to restart that thread :-).

I have seen a lot of notes about problems with different
companys, and few about good things, so I thought I would
pass this along.
I own a alinco DR110 that I have used for both voice and
packet for the last year and a half, of which approx 6 months
of that time was continous use. About 3 weeks ago the display started
going dim (a prevously reported problem from others). Looking at
the warranty card it should have cost me $38 to get it repaired,
since I was near the end of the two year warranty.
I sent the rig to alinco and it was back in my hands in 12 days
repaired, and at no cost to boot. This type of outstanding service
is very seldom seen these days. I will definately remember this when
its time to buy my next rig.

ps

I have no connection with alinco other than owning one of their
radios.

I have to say, I've always wondered why there is a Extra class
requirement for these operators. Clearly, these people know what they
are doing or they wouldn't be there in the first place. It seems
rather humorous to have to grant a "waiver" to someone who had
literally trained for years for this particular mission just to
operate the ham radio.

I suppose that 20wpm CW requirement will come in real handy to
downlink critical telemetry when the TDRSS multi-megabit data links
crap out, and when the S-band and VHF radios on the shuttle go up in
smoke.

Is there a CW key for the Motorola HT on board? :-) Perhaps the
payload specialist can use the "arm" to send even higher speed CW.

Say what you will, but THEY are COMING BACK!
If you wonder what is going on, the Space Aliens from the X dimentia are coming back. They will be back on July 5, 1999, when everyone who has any sense will be calling CQ "BOB"! Just ask the SubGenii. They KNOW!!!!

Seriously, folks: Back when Ham Radio was FUN (as in: back before we moved to this hell hole of a house and I only have enough room for my 1930's era printshop and no room for an antenna and don't even ask aboutthe equipment!), I used to get that "Talkin' With them Aliens from outter space again, ain't ya, Bub?" look from my neighbors. Well, it doesn't happen any more, but then, I ain't as happy as I was "back then."

Oh, but to win the lottery and move to some DX site where I can call QRP in a pile up. (My license expires in 1995. I wonder if I'll notice.)

Nils / WB8IJN

And don't even ask about QSL cards. I print my own. Even have a stack of 'em here. BUt with no place to work the radios, I use 'em for book marks and coasters for my whiskey glass. Besides, you can't smoke 'em and the price of drugs has driven me to drink. You can have one for an SASE though. Not since the QSL services died. I wonder if I will notice. Hmmm.

288. UHF HT project, help wanted !!!

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 09:07:17 UTC
From: euamih@eua.ericsson.se
Message-ID: <1992Mar24.090717.17442@eua.ericsson.se>
Source record: 291765

I'm looking for an extremely rugged 70 cm HT, ~2W output power, low current consumtion for extended battery life.
I thought that it might be a good idea to buy a 2:nd hand commercial UHF HT and tune it to the
70 cm band (432-438 MHz in Sweden...)
Since I'm into software it would be nice if the radio had a programmable digital VFO so I can
reduce the "hardware" mods to a minimum and do most of the work in the radio's software.
No fancy features wanted, but it would be nice if the radio had a numerical keypad that could
be used for frequency entry. A display would be nice too.....

Is this a good idea ??? Too expensive ??? Any suggestions ???

Source record: 291767

The qsl route for 5U7M is via JARL. How do I get my enevolope to whoever handles the qsling for 5u7m. I'm not sure what the JARL does with the cards and green stamp when it arrives.

Thanks for any help

291. faqs for the attic antenna guy

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 12:24:02 UTC
From: furr@pilot.njin.net
Message-ID: <Mar.24.07.24.02.1992.12205@pilot.njin.net>
Source record: 291768

I said I'd send the faqs to the ham who wanted info about callbooks on
line. But I lost his email address. So here they are. If this violates
the
newsgroup protocol, please forgive and email me the protocol. Isn't
somebody supposed to post the faqs regularly?

The following is a monthly posting of frequently asked questions for
|Amateur Radio. The FAQ is divided into 5 parts:
Part 1 - Beginning Amateur Radio questions
Part 2 - "Where can I find ..." questions
Part 3 - Amateur Radio Organizations and Publications
Part 4 - Common Advanced and Technical questions
Part 5 - Special Topics in Amateur Radio
If you have any questions you think should be added, please email to me at
dls@genrad.com.
This FAQ should ONLY be reposted once a month. If someone asks a question
that is answered by this FAQ, I suggest emailing to that person, or,
alternately, post only the section that answers the question, NOT the entire
FAQ posting. Read news.announce.newusers for proper net etiquette.
This FAQ is available via anonymous FTP from ftp.cs.buffalo.edu.

FREQUENTLY ASKED QUESTIONS
Part 1 - Beginning Amateur Radio questions

Table of Contents:
** What is Amateur Radio?
** Who can become a ham in the United States?
** OK, so how do I become a ham in the United States?
** Where can I locate information and books on Amateur Radio?
** How much does it cost?
** Where can I take the tests?
** What are the tests like?
** What can I do with a ham radio license?
** What can't I do with an Amateur Radio license?
|** I'm interested, who will help me?
** Should I build my own equipment?
** Should I build my own antenna?
** Do I need a huge antenna and tower like my neighbor?
** Where do I buy equipment?
** I've only got one 'meter' on the front of my radio - does this mean
it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-)

FREQUENTLY ASKED QUESTIONS
Part 2 - "Where can I find ..." computer questions

Table of Contents:
|** Where can I get ham radio software for my computer?
|** I don't have a news server at my site, how can I subscribe to the
rec.radio.amateur groups?
** I can read news at my site, but I don't have posting privileges. How
can I post?
** I don't have FTP capability at my site. Can I get files via email?
|** Where can I find Anonymous File Transfer Protocal (FTP) sites that
have ham-related files?
|** I'm having trouble using FTP....HELP!
|** Are there any Telephone BBS's which have ham related files?
|** Are there Dialup News services or BBSs for Amateur Radio?
** Are there any on-line callbooks and geographical name servers?
|** Where can I find modifications for my radio to extend its capabilities?
** Where can I find VE sessions in my local area?

FREQUENTLY ASKED QUESTIONS
Part 3 - Amateur Radio Organizations and Publications

Table of Contents:
|** How do I use the incoming and outgoing QSL bureau?
** Are there any news groups for CAP?
** What's the name of the QRP club that issues QRP numbers?
** Can I send ARRL or W5YI electronic mail?
** What magazines are available for Ham Radio?
|** How do I become a 10-10 member?
** How do I join MARS?
** How do I join RACES?
** What organizations are available to help handicapped hams?
|** I am looking for a specific ham, can anyone help me find him?
** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio

allocations and question pools?
|** Can I post my neat new ham related program on rec.radio.amateur.misc?

FREQUENTLY ASKED QUESTIONS
Part 4 - Common Advanced and Technical questions

Table of Contents:
|** What are the different US amateur classes and what can each of them do?
|** I'm confused. What do all those abbreviations mean???
** What do all those "tones" mean?
** Where can I learn more about Amateur Radio if I live outside the USA?
** How can I get a "reciprocal license" if I am a licensed ham from another
country?
|** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
** I got TVI...HELP!!!
** Did you know that you can get college credit for being a ham?
** On what frequencies does JPL and GSFC retransmit the shuttle audio?
** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
** What is the standard for measuring Morse code speed?
|** How do I modify my current Amateur license?

FREQUENTLY ASKED QUESTIONS
Part 5 - Special Topics in Amateur Radio questions

Table of Contents:
|** Is there any information on antique radios?
|** Where can I buy vacuum tubes?
|** What do I need to get started in packet radio?
** What do I need to get started in satellite communications?
|** What is available to get started in SSTV and WEFAX?

FREQUENTLY ASKED QUESTIONS
Part 1 - Beginning Amateur Radio questions

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service
whose primary aim is public service and communication between
private persons. Amateur Radio operators are commonly called
hams. It's great fun to talk to someone in Japan on the radio!
Here's one ham's description of Amateur Radio: "Climbing towers,
roofs, trees, or any other fixed object to hang antennas. Restoring
ancient equipment to operation. Playing with glitzy new equipment.
Blowing up finals. Cutting holes in your (or your buddie's) car.
Building your own stuff. Wiping out your neighbor's TV and then
having to explain and fix it. The joy and magic of communicating
with someone half way around the world with a few bits of glass and
wire."

** Who can become a ham in the United States?
Anyone who is not a representative of a foreign government can be an Amateur Radio operator in the USA. There are tests that you must pass to get a license, however the tests are not insurmountable. There are 7-year-old hams and 80-year-old hams. There are many handicapped hams who get great enjoyment out of Amateur Radio.

** OK, so how do I become a ham in the United States?
There are now two entry-level class licenses in Amateur Radio. A Novice license requires passing a 30-question written test and a Morse code test given at 5 words per minute. A Technician license requires passing the 30-question written Novice test and a 25-question written Technician test, but no Morse code test. See local radio clubs or radio stores in your area for more information. Note that you can get a higher class license instead, simply by passing the required tests.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications. Be assured that once you get a callsign, the mail order ham radio companies will find you :-).
For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a Novice License manual, a Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

** How much does it cost?
To take the Novice tests, it's free. To take the Technician or higher class tests, there is a small charge (around $5 currently) to cover copying costs and running the testing sessions. The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests can be given by any two qualified hams of General

class license or above. The Technician tests and all higher class license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee ($5.25 for 1991); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but
here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the
United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization
thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur
Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate
Radio System).
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some elctronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals
back to people on the Earth.
* Experiment with Amateur TV (SSTV) or send still-frame pictures
by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out
local radio clubs. As well, some people have volunteered to be
an Elmer over the Usenet. Paul has volunteered to maintain that
list. If anyone wants to be an Elmer, or needs an Elmer, email him:
| Paul W. Schleck, KD3FU, acm005@zeus.unomaha.edu

** Should I build my own equipment?
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

** Should I build my own antenna?
Most hams build their own antennas for base station use and buy
antennas for mobile (car) use. Most beginner ham books describe how
to build different types of antennas. Order of difficulty, from
easiest to more difficult, for some common antennas are: wire dipole,
Zepp, Yagi, Quad.

** Do I need a huge antenna and tower like my neighbor?
No! Large beam antennas and 40-foot towers are very expensive. As
a beginner, a simple dipole antenna is perfectly adequate. As you
gain experience (and money :-), you may want to invest in something
bigger.

** Where do I buy equipment?
If you can afford new rigs, there are many mail order stores that
advertise in ham radio magazines. If you want to buy a used rig,
the best place is at a "hamfest" (ham flea market). You should take
along an experienced ham, since some of the used equipment may be
inoperative, overpriced or poor quality. You can also answer ads
in ham magazines or posted at ham radio stores, although often, by
the time you call, the equipment has already been sold.

** I've only got one 'meter' on the front of my radio - does this mean
it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-)
Meter refers to the wavelength of the signal at which you are
transmitting. There is a inverse relationship between the frequency
(specified in kilohertz or megahertz) and the wavelength (specified
in meters or centimeters).

FREQUENTLY ASKED QUESTIONS
Part 2 - "Where can I find ..." questions

** Where can I get ham radio software for my computer?
Atari: John Adams KC5FW, 17106 Happy Hollow, San Antonio, TX 78232
"or tune into the weekly net Sundays 1600 UTC on 14.325 MHz".
| MacIntosh: MacNet, John Seney WD1V 144 Pepperidge Dr, Manchester,
| NH 03103 (sent 2 800k FORMATTED diskettes, one of which
| contains a TEXT file containing your name, address, home PBBS,
| your radio & computer interests and equipment).

** I don't have a news server at my site, how can I subscribe to the
** rec.radio.amateur groups?
To subscribe to rec.radio.amateur.misc, send email to:

Info-Hams-Request@ucsd.edu

In the body of the message, write:

subscribe Info-Hams

Similarly, to subscribe to rec.radio.amateur.packet, send email to
Packet-Radio-Request@ucsd.edu, message is "subscribe Packet-Radio",
and to subscribe to rec.radio.amateur.policy, send email to

Ham-Policy-Request@ucsd.edu, message is "subscribe Ham-Policy", and
to subscribe to rec.radio.shortwave, send email to
listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)".
| TO UNSUBSCRIBE, follow directions above, changing the command word
| "subscribe" to "unsubscribe"; don't post to the newsgroup itself!
Help is available by using the command word "help". Note that command
words MUST be the first word on each line of the message.

Another mailing list of interest is antique-radios. To subscribe,
contact antique-radio-request@swbatl.sbc.com (Tom Adams). This mailing
list is for discussions on antique radio, television and vintage
electronics.

** I can read news at my site, but I don't have posting privileges. How
** can I post?
You can post to rec.radio.amateur.{misc,packet,policy}
by sending your posting email to Info-Hams, Packet-Radio, or
Ham-Policy, all at ucsd.edu. To post to other newsgroups, send the
posting email to (groupname)@ucbvax.berkeley.edu and for the
groupname, replace periods with dashes.
For example, to post to sci.space, you would send your posting to
sci-space@ucbvax.berkeley.edu.
All of the Amateur radio newgroups are archived on ucsd.edu under
subdirectory mailarchives/{Ham-Policy,Info-Hams,Packet-Radio}.

** I don't have FTP capability at my site. Can I get files via email?
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for an;ything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. Remember, though, that each request to the BITFTP
server may take several hours (or longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with

the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example
of a request:
reply your_name@your_site
connect uxc.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/Tech.v3.3.sit.hqx.Z
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

** Where can I find Anonymous File Transfer Protocol (FTP) sites that have
ham-related files?
There is a fairly definitive list of anonymous FTP sites available
from pilot.njin.net under subdirectory /pub/ftp-list in file ftp.list.
You can also have the latest copy (published monthly) via mailing
list by emailing to odin@pilot.njin.net, subject "listserv-request",
body of message "send help". Revision info for the ftp list should
be send to odin@pilot.njin.net.

General files for any computer and informational archive:
ftp.cs.buffalo.edu (submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info and
the KA2UGQ worldwide BBS list on ~pub/ham-radio/phone_bbs_list
| wsmr-simtel20.army.mil (unmaintained since the resignation of W8SDZ,
| however, problems with these archives should be directed to
| action@wsmr-simtel20.army.mil) or wuarchive.wustl.edu -
The wuarchive site is also known as the "Simtel Mirror" as it
contains directories that "mirror" the Simtel directories.
These sites contain ham radio mods and ham radio software. A
wide assortment of files covering many topics can be obtained
from the Simtel archives. If you cannot directly FTP from
wsmr-simtel20, there is a mail server that can help. Send
mail with the text "help" to listserv@vm.ecs.rpi.edu.
quiche.cs.mcgill.ca (comments to archie-l@cs.mcgill.ca) - contains
ham related software on /hamradio, including the FAQs, Elmer
lists and geoclk (try the command 'prog geoclk' to find all
files whose name contains "geoclk"). Log on as "archie".
The "archie" server is also available to Australia (ONLY)
thru deakin.os.au and to Europe (ONLY) thru nic.funet.fi.
archive.cs.ruu.nl, sol.cs.ruu.nl, freja.diku.dk -
contains the FAQs for rec.radio.amateur (may not be current)
These sites are in Denmark and the Netherlands and are

intended to be accessed from Europe only.
ftp uxc.cso.uiuc.edu, log in as "anonymous", password is your email address, cd pub/ham-radio - This contains the HyperCard Hamstacks written by Diana Syriac as well as ASCII readable ham radio question pools
apple.com, cd pub/ham-radio - Ham software and information, especially MacIntosh software

Amiga computers:
ab20.larc.nasa.gov, wolfen.cc.uow.edu.au - ham radio files

If you are having trouble connecting to the above FTP sites, read the telnet/FTP troubleshooting hints below or check with your local system administrator.

** I'm having trouble using FTP....HELP!
The unfortunate situation here is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 137.48.1.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it....or check the FAQs. Your host may not recognize the "fully-qualified domain name" (like marvin.cs.buffalo.edu), but it should ALWAYS recognize an IP number.
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet tot the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent.
* Syntax for telnetting from different operating systems differ.

Some common cammand syntaxes are: (angle brackets are for
readability, do not type these in literally)

Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* If all else fails, ASK your system administrator or check system
documentation.
| * Compression techniques are different for different operating systems.
| However, these hints should help: foo.sit needs MacIntosh UnStuffit
| to unstuff; foo.hqx needs MacIntosh BinHex to uncompress; foo.Z
| needs Unix 'uncompress' to uncompress or VMX compress_vms.exe (on
| gatekeeper.dec.com) will work too. If more than one method was used,
| like for foo.hqx.Z, start at the outside and work in (so uncompress
| on Unix with 'uncompress' first, transfer to MacIntosh, then
| uncompress with BinHex to get uncompressed file).
| * There is an excellent introduction to FTP and archiving software
| regularly posted to comp.binaries.ibm.pc.

** Are there any Telephone BBS's which have ham related files?
WB3FFV has one, phones are 301-625-0817 or 301-625-9482 or
301-625-9663. Data settings are 8 bits, NO parity, 1 stop bit.
Login is bbs, no password.
This BBS is also available via UUCP, login is uucpanon, no password.
For a listing of available archived, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit.

| There is a comprehensive worldwide phone BBS list put together by
| KA2UGQ, available from Simtel20, the Simtel Mirror on Wuarchive,
| and the Supplemental Archives at ftp.cs.buffalo.edu.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by
volunteer hams and provide bulletins of specific interest to amateurs,
hence they are perfectly legal to rebroadcast on ham bands according
to FCC Regulation 97.111B(6). To lessen the load on the dialup lines,
consider getting your local repeater operator to rebroadcast it, or
tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly,
KC9RP, located in Illinois. The news is typically updated 8am CST
Fridays. Phone numbers are 1-708-299-INFO (299-4636) and
1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations
for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm
Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
| West Palm Beach 1-407-965-1234
| Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angles 1-213-462-0008
| NYC 1-718-353-2801
| Ohio 1-513-275-9991
| Seattle 1-206-368-3969

** Are there any on-line callbooks and geographical name servers?
If you are at an Internet site you can connect using telnet to one
of the two primary servers:

callsign.cs.buffalo.edu (currently 128.205.32.4)
ham.njit.edu (currently 128.235.1.10) (alias plan9.njit.edu)

There is also a general geographical name server at:

martini.eecs.umich.edu (currently 141.212.100.9)

The callbook servers sit on port number 2000 and the geographical
name server sits on port 3000. These are different port numbers
than what telnet usually defaults to. So if you just telnet to these
machines, you will get a login prompt instead of the server. How you
tell your telnet program to connect to port 2000 or 3000 instead of
the default port is operating system dependent but it is usually done
with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints
above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory
and they support fairly detailed help facilities. The first command
you should execute when connecting to one of these servers is "info".
This will list general info about that server and how to use it. You
should then type "help" to list the various commands available.
Typing "help" followed by a command name will give you a little more
detail about that command. Servers allow searches by call, last name,
zip code or city and also provide regular expression filters to trim
your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty
Carruth, N7IKQ. This database currently contains US and Canadian
callsigns and it does not contain club calls. A new version of the
database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com
(The UUCP address is ...!uunet!dptspd!callbook). In the body of the
text, say "lookup" followed by callsigns you want to look up. If

your mailer appends signature files, you should put a line "quit" at
the end of your request (before the signature file). If you want
help, put the word "help" on a line by itself. Here is what a
request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

If you are a packet radio station, callserver data is available from
REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,
separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet
network, *NOT* the Internet. If you attempt to send Internet mail to
this address, and use the old .NA suffix instead of the new .NOAM
suffix, it will get routed to Nimibia (Internet suffix .na) which is
currently paying a lot of money for misdirected ham mail. Help
maintain a positive example for amateur radio and please do not
attempt this!

** Where can I find modifications for my radio to extend its capabilities?
| Some mods can be found on wsmr-simtel20.army.mil or
wuarchive.wustl.edu (BITNET ONLY).

There is a new server at pcserver@novell.business.uwo.ca. Some
| examples of main body email requests are as follows:
| HELP
| SENDME RADIO MODS
| SENDME TH215 MODS
| SENDME ALLBAND MODS

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warrantee and
that these mods are NOT guaranteed to work.

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more
often, they are announced by local radio bulletin boards. The
local packet BBS will most likely have a monthly updated schedule
for VE sessions. ARRL or W5YI can generally be called and asked for
local VE sessions as well. Don't forget that you will need the
following when you go in for an upgrade: a copy of your current

Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

FREQUENTLY ASKED QUESTIONS
Part 3 - Amateur Radio Organizations and Publications

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper
| clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area.
| Addresses for QSL bureaus are listed in QST (and below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

| Addresses for US Incoming QSL Bureaus:
| USA 1 - W1 QSL Bureau, Box 216, Forest Park Stn, Springfield, MA 01108
| USA 2 - ARRL 2nd District QSL Bureau NJDXA, POB 599, Morris Plains,
| NJ 07950
| USA 3 - C-CARS, POB 448, New Kingstown, PA 17072-0448
| USA 4 - All single-letter prefixes ONLY
| Mecklenburg Amateur Radio Club, POB DX, Charlotte, NC 28220
| others:Sterling Park Amateur Radio Club, Call Box 599, Sterling Park,
| VA 22170
| USA 5 - ARRL 5th District DX QSL Bureau, POB 50625, Midland, TX 79701
| USA 6 - ARRL 6th District DX QQSL Bureau, POB 1460, Sun Valley, CA
| 91352
| USA 7 - Willamette Valley DX Club, POB 555, Portland, OR 97207
| USA 8 - 8th Area QSL Bureau, POB 182165, Columbus, OH 43218-2165
| USA 9 - Northern Illinois DX assn, Box 519, Elmhurst, IL 60126
| USA 0 - W0 QSL Bureau, Ak-Sar-Ben Radio Club, POB 291, Omaha, NE 68101
| Hawaii- Wayne Jones NH6GJ, POB 788, Wahiawa, HI 96786
| Alaska- Alaska QSL Bureau, 4304 Garfield St, Anchorage, AK 99503

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However, rec.aviation is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. In addition, there is a mail digest just for CAP. Subscribe by emailing to capital-request@cps.udayton.edu. Submit articles by emailing to capital@cps.udayton.edu. CAP related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net, using the address username%arrlhq.UUCP@uhasun.hartford.edu, replace username as shown below:
Jon Bloom, KE3Z, Laboratory Supervisor jbloom
Ed Hare, KA1CV, Laboratory Engineer ehare
Rus Healy, NJ2L, QST Asst Tech Ed, Product Rev rhealy
Chunk Hutchinson, K8CH, Membership Svcs Mgr chutch
Bart Jahnke, KB9NM, VE Dept Manager bjahnke
Dave Newkirk, WJ1Z, QST Asst Tech Ed, Hints dnewkirk
Paul Pagel, N1FB, QST Asst Tech Ed, Tech Corres ppagel
Rick Palm, K1CE, Field Services Manager rpalm
Mark Wilson, AA2Z, QST Managing Editor mwilson
Tammy-Beth Zimmerman, KA1WWP, Membership Asst tzimmer
Technical Information Service, tech questions tis
DXCC dxcc
Awards (WAS, etc.) awards
Contests contests
Outgoing QSL Bureau buro

For other questions (ARRL policy issues, etc.), try 2155052@mcimail.com, which sends them to the front office.

The Washington Area Coordinator for the ARRL, Perry Williams W1UED (sort of our "lobbyist" to the FCC and Congress) has mcimail access at 2242662@mcimail.com.

Fred Maia, W5YI, another large VEC, also has mcimail access at 3511297@mcimail.com.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles

QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655.
Subscriptions to 201 Latrhop Way, Ste D, Cacramento, CA 95815,
(800) 365-SUBS - lots of special interst columns, like QRP,
ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 -
up-to-date information on Amateur Radio happenings, including
VE information and statistics

|** How do I becoma a 10-10 member?
| 10-10 is simply an organization to sponsor the use of the 10 meter
| band. It was first conceived when propagation was poor on 10 meters,
| as a method to get more hams to use 10 meters. The past few years
| have been great for 10 meters worldwide. However, "the bands are
| closing down" again, and 10 meters will once again be limited more
| for local communications, except for sporadic band openings, until
| the next sunspot cycle.

| To join 10-10, work ten 10-10 members and LOG each 10-10 number, call
| sign, operator's name and location. Send the list to your numeric
| call sign or DX area manager (as shown below), with $5.00 U.S. new
| membership registration fee ($6.00 for foreign addresses).

| 10-10 International Area Managers:
| USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
| USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
| USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
| USA 4 - KY, TN, FL, VA, NC, SC only
| Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
| USA 4 - GA, AL, Puerto Rico only
| Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
| USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
| *summer addr Jun-Oct Box 13, Rand, CO 80473
| USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
| USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
| USA 8 - John Hugentober N3FU, 4441 Andreas Ave, Cincinatti, OH 45211
| USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
| USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
| All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided
they have transmit and receive HF capability for MARS frequencies
(they don't need transmit capability for Amateur HF frequencies). For
application forms contact:

Chief, Air Force MARS
TIC/DLTXM
Scott AFB, ILL 62225-6001
(618) 256-5552. Or, contact via Internet goes to
__daniels@server.af.mil, put "Pass to MSgt Trimmer" in subject line.

Chief, Army MARS
HQ, US Army Information Systems Command
ATTN: AS-OPS-OA
Fort Huachuca, AZ 85613-5000

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency.
The Radio Amateur Civil Emergency Service is a part of a municipal,
county, or state government. This does not mean, however, that
every such government has a RACES program. If your government does
not have a RACES, ask them to refer you to the nearest jurisdiction
that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it
thru 2155052@mcimail.com) and a book called "The ARRL Plan for the
Disabled", available at no charge from the ARRL Regulatory
Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try
directory assistance from the phone company or the locator service
provided by the Salvation Army. A Salvation Army post in your
local area may be able to help you. If you have his/her callsign
or name, you might also try one of the on-line callservers shown
| above. Also, the Quarter-Century Wireless Assn maintains a collection
| of callbooks going back to "the beginning of time". Their address
| is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a
| dial-in line for accessing new ham callsigns. Try (1-708-234-8011)
| at 2400 baud.

** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
** allocations or question pools?
Part 97 is available by ftp from wuarchive.wustl.edu, file is
mirrors/misc/hamradio/part97.txt.

An ASCII copy of the question pools are avilable by ftp from
uxc.cso.uiuc.edu (128.174.5.50) in /pub/ham-radio/<class>-pool.txt.Z,

where <class> is novice, technician, general, advanced or extra.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive
these newsgroups as mail digests. Posting is also a one-shot thing.
If you post and someone missed it, it is gone. A better way would be
to announce the existence of your program here, along with
information on how to obtain a copy of your program. You can also
submit it to one of the FTP archive sites, which will allow the world
to access it without you having to mail it to each requestor. If you
just GOTTA post it somewhere, post it to more appropriate groups,
| like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

FREQUENTLY ASKED QUESTIONS
Part 4 - Common Advanced and Technical questions

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
| and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
| AMSAT Amateur Satellite Corporation
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version
of RTTY. Also used commercially as SITOR (Simplex Teleprinter
Over Radio).
| ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for

downed aircraft and missing kids and uses frequencies just
outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
| Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
| Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
| OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
| QCWA Quarter Century Wireless Association, membership means you've
| been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
| SK Silent Key, a nice polite way to say a ham has passed on "to
| that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Like ATV but slower and used on lower bands
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
| WARC World Administrative Radio Conference, a summit meeting that
| occurs every few years, required by international treaty to
| determine how the spectrum get sliced up to all vying
| communications services (next one is in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters", which is a reference to the wave-
length of a common Amateur frequency band used for local
communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the USA?
Write to the ARRL and ask. They can usually tell you how to get a license in your country.

** How can I get a "reciprocal license" if I am a licensed ham from another
** country?
You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant reciprocal operating permits to visiting alien Amateur operators.

|** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
First of all, don't dispair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
| * If the restriction is due to local ordinance, you may have relief
| via PRB-1. Meet with the local government and seek an informal
| compromise. It is possible to win in court...but it's expensive and
| time consuming.
| * If you are restricted by "covenants" attached to the deed of your
| home, your options are severely limited. Covenants are considered
| to be private, voluntary contracts between individuals and are
| outside of the intended apllication of PRB-1. In many cases, you
| can petition the Homeowner's Association for an exception. Sometimes

| you can win in court on the basis that other violations of the
| covenants by others without action taken constitutes abandonment
| of the agreement.
| * For further information, contact the General Consel's office of the
| ARRL, 225 Main St, Newington, CT 06111.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck!
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and
engineering thru placement tests for CLEP (College Level Entrance
Placement) exams and DANTES (Defense Activity for Non-Traditional
Educational Support) exams if you have an Advanced or Extra class
Amateur license. For more information, ask your campus education
office or (for DANTES) your military education office.

** On what frequencies does JPL and GSFC retransmit the shuttle audio?
Station VHF 10m 15m 20m 40m 80m
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165 3.840
W6FXN 145.46
K6MF 145.585 7.165 3.840
All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - Jet Propulsion Laboratory (JPL), Pasadena, CA
W6FXN - Los Angeles, CA
K6MF - Moffett Field, CA

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?

It is illegal to operate an amateur radio (transmit AND receive!)
aboard a commercial airliner. The captain is NOT authorized to give
you permission to use a radio. For reference, the pertinent portion
of the Federal Aviation Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the HY (or any electronic equipment) onto the airplane. Generally, you can appease the security guards, simply by showing that the unit is operations and doesn't have a bomb inside. For a radio, just turning it on and opening the squelch satisfies them. Expect more difficulty during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you have the permission of the Pilot-in-Command. It is possible for the radio to interfere with the plane's navigation or communication equipment, so be sure to ask first, and always obey the requests of the PIC. He knows his airplane and radios better than you do.

** What is the standard for measuring Morse code speed?

The word PARIS was chosen as the standard length for CW code speed. Each dit counts for one count, each dash counts for three counts, intra-character spacing is one count, inter-character spacing is three counts and inter-word spacing is seven counts, so the word PARIS is exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

|** How do I modify my current Amateur license?
| To modify your license (change of address, change of station location,
| change of name, renewal, or even change of callsign), submit an FCC
| Form 610 to the FCC. Forms are available from the FCC or ARRL or a
| local VE session or ham radio store. Do NOT use a photocopy. Check
| off the appropriate boxes, fill in the new/changed information, SIGN
| THE FORM, and attach a copy of your current license (or a brief letter
| of explanation for its absence, ie, "my dog ate it"). NOTE: If you
| check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
| even if all you wanted was to supply a new address; if you want to keep
| your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020,
| Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only)

| is about 2-4 weeks.

| ANY ham can apply for a new callsign (this is different from the past
| where you can only get a new callsign if you move or upgrade). You
| can't specify WHICH ONE you want, a new one comes from the same pool
| as new licensees. The callsign is based on your mailing address. For
| overseas military and civilians, be sure to specify a station location
| that is within FCC jurisdiction.

| New licenses are for 10-year terms. If you apply for renewal before
| its expiration date, the expired license is valid for 60 days after
| expiration to allow for the new license to arrive. You have up to
| 2 years after expiration (5 years for an old 5-year license) to renew
| before re-examination is required (but you can't operate with an
| expired license). You will lose yourcurrent callsign after 1 year
| after expiration if you don't renew.

FREQUENTLY ASKED QUESTIONS
Part 5 - Special Topics in Amateur Radio questions

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 -
old radios, TVs, ham equipment, 40s and 50s radios,
telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q,
Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb,
NY 14469 - sponsors the Wireless Museum
| See also the info on antique-radios mailing list in FAQ 2.

|** Where can I buy vacuum tubes?
| Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
| Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
| Fair Radio Sales, Box 1105, Lima OH 45802
| Fala Electronics, Box 1376-1 Milwaukee, WI 53201
| Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112
| (10504-524-2343)

** What do I need to get started in packet radio?
Packet radio is a digital form of communication using radios. There
are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use
packet radio, you'll need a radio (2 meters or 1.25 meters is most
popular), a box that converts radio signals to digital signals that
a computer can understand (called a TNC or terminal node controller)
and a computer or terminal. For some computers or TNCs you may need
special software as well. However, most TNCs and computers get along
quite well with just a terminal emulator software package. Most
personal computers can be interfaced to use with packet radio. Since
there are many digipeaters, generally even an HT will work with
packet radio.

For more information on packet radio, you might try TAPR (Tucson
Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).
| There is also a newsgroup, rec.radio.amateur.packet (see mailing list
| info above).

** What do I need to get started in satellite communications?
For more information about Amateur Satellite Communications, try
AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington,
DC 20044 (301-589-6062). They also have an international net on
Sundays on 14.282 MHz at 1900Z.

|** What is available to get started in SSTV and WEFAX?
| A few years ago everyone bought a ROBOT 1200C for SSTV. To connect
| the system, you'll need the ROBOT 1200C, a color TV camera (either
| NTSC or PAL), a color TV set or monitor, speaker and mic connectors to
| your transceiver and a tape recorder for picture storage. For
| information write to Robot Research, 5636 Ruffin Rd, San Diego, CA
| 61927. A replacement PROM is available to give the 1200C other
| transmission modes, such as Wraase, Martin, Scottie, and AVT, available
| from Martin Emmerson G3OQD, 6 Mount Hurst Rd, Hayes, Bromley, Kent,ENG.

| The ROBOT 1200C also has a parallel port for connection to a home
| computer, for transferring images to/from the 1200C, etc. Here's
| info for several programs:
| IBM PCs: Hi-Res v1.4, Tom Jenkins N9AMR, 5968 S Keystone Ave,
| Indianapolis, IN 46227; SCAN v6.0, Bert Beyt W5ZR, 301 Tampico
| St, New Iberia, LA 70560; SSTV, Garnet Bebermeyer WB0UNB,
| 15 Almeda Ct, Fenton, MO 63026; and IMAGE, Dick Isely WD9GIG,
| 736 Fello St, St Charles, IL 60174
| Amiga: Tom Hibben, Box 188, DeSoto, WI 54624

| Two clones of the 1200C are available that accept the replacement
| PROMS: LM9000, John Wilson VK3LM, RMB 4201A, Tallangatta Valley 3701,
| Victoria, Australia (available as blank PC card only); and
| NS-88, Munaki Yamafuzi JF3GOH, POB 670, Osaka, Japan 531.

| The only other standalone scan converter is the Wrasse SC-2, available
| from Volker Wraase Electronic, Kronsberg 10, D-2300 Altenholz, Germany.

| There is some home computer hardware and software available:
| Amiga: AVT Master (SSTV and WEFAX), AEA, POB C2160, 200 196th St SW,
| Lynnwood, WA 98036-0918; and a homebrew SSTV transmit program
| from Bob Salnic WA9BVE, Spkane, WA (salnick@DejaVu.spk.wa.us).
| Atari ST: Atari Microcomputer Network, John Adams KC5FW, 17106 Happy
| Hollow, San Antonio, TX 78232; and ASTUR, GEERAERT Michel,
| W Elsschotlann 21, B-8460 Koksijde, Belguim. See 73 Magazine
| issues December 89 and January 90 for more details.
| IBM PC: PC HF Facsimilie 4.0, PC GOES/WEFAX, Software Systems

292. FT2400H? Any experiences?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 12:38:26 UTC
From: pjml@unixa.nerc-swindon.ac.UK
Message-ID: <48330.pjml@[139.166.140.1]>
Source record: 291769

I have been looking at a FT2400H. Has anyone got any experiences good or
bad with one of these things?
So far my feelings go like this:

Positive points for 'respectable' RF output, reasonable intermod. resistance
and uncluttered control panel. Also being able to label the memories with
up to 4 letters is nifty!

Negative points for having a horrible plastic plug as the mic. socket, not
really enough audio O/P for use in a RV, and having a SO239 socket rather
than a 'N' connector....

What say you good people? Should i rush out and inflict serious damage on my
Visa card, or are there any nasties to be wary of?

294. Mac software for MFJ

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 13:34:13 UTC
From: m14494@mwvm.mitre.org
Message-ID: <1992Mar24.133413.21149@linus.mitre.org>
Source record: 291771

I'm looking for some Mac software to use with an MFJ 1224. This is one of those cw, rtty, ascii interface units. It has TTL output, and relies on the software in the computer to decode the characters. I can do the TTL-RS442 conversion, but I can't find any software for the Mac. Anyone know if there is any, and where I can get it? Shareware? Public domain? Thanks.

Mike, N4PDY

In article <1992Mar22.230337.3877@bb1t.monsanto.com> sekell@bb1t.monsanto.com writes:
:> andy@access.digex.com (Andrew M Cohn) writes:

:>>effective. The cops seem to have external mikes containing rubber duckie
:>>antennas. Clipping the mike to your lapel keeps the antenna up high
:>>and vastly improves reception. Why can't we have the same thing? Maybe
:>>there is a source for these mikes...do you know of any???
:>
: I have seen speaker-mikes with BNCs on the top for an antenna advertised
:in a catalog from Periphex. (The battery folks.) It also apparently includes
:a touch-tone pad! And it does have a coiled cord. (At least the one in the
:picture does...) $49. Hey, why didn't I ever buy one of these?
:

It is a fine mike; I purchased one a year ago.

However, before you rush to order one, please note that the ad says
something like "add a touch tone pad and have DTMF capacity" -- the
mike doesn't come with a pad, just an indent where one can be
installed.

298. DX Advisory Committee Report - February 1992

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 14:45:48 UTC
From: "Jim Reisert, AD1C" <reisert@mast.enet.dec.com>
Message-ID: <9203241445.AA29548@enet-gw.pa.dec.com>
Source record: 291775

DX ADVISORY COMMITTEE REPORT
FEBRUARY 1992
PART 1 of 2

NOTE: Based on February DXAC Report by Ted Pauck, K8NA, DXAC Chairman.
Abridged & Edited By Bill Shipp, KC1AG, NE Division Representative.
(Comments reflect my opinions, not those of the DXAC.)

I. DXCC COUNTRY PETITIONS

PRATAS ISLAND:
Both Samuel Liu, BV4VB, and Tim Chen, BV2A/BV2B, have requested information on preparing a new DXCC country petition for Pratas Island (21 deg N, 117 deg E). There will be no vote scheduled until a petition is actually received by the DXAC. BV4VB has indicated a petition may be forthcoming by April.

COMMENTS:
KC1AG was contacted by Mr. Liu and agreed to assist him in gathering charts and other materials for his petition. W4VQ has claimed KC1AGs help may constitute a conflict of interest. KC1AG has requested W4VQ cite the specific rules and operating guidelines which he claims are being violated, noting that the ARRL By-Laws indicate advisory committee members have a responsibility to assist anyone preparing studies or petitions that may come before an advisory committee. The matter is under discussion. (See below.)

VATICAN ENCLAVE OF THE HOLY HOUSE - HV0HH:
Germano Gabucci, IK6FHG, submitted a petition for adding this enclave to the DXCC Countries List. The DXAC voted (15 No to 0 Yes) not to recommend this enclave as a new DXCC country. No ballot was received from W7ZR.

CEUTA & MELILLA:
Antonio Galiana, EA5BY, President of the Lynx DX Group, has submitted a proposal to create new separate DXCC countries Melilla and Ceuta, based upon Point 3(a), Separation by Another DXCC Country. A vote has been scheduled for June 1.

COMMENT: It appears that the petitioner misinterpreted Point 3(a).

SPRATLY ISLANDS (1S):
KC1AG has submitted a study that claims the current DXCC country of the Spratly Islands (1S) should be deleted from the DXCC Countries List. DXAC members are now studying this proposal, which is based upon the changes in occupation of the majority of the

islands since they became a DXCC country.

COMMENTS: The Spratly Islands were originally made a DXCC country in 1963 because they were claimed by several countries but occupied by none. Most of the above-water entities in the Spratlys are now occupied and have been for many years. In fact, Taiwan has occupied the island of Itu Aba since 1955-6, well before the Spratlys were made a DXCC country.

Should the Spratlys be deleted, two new DXCC countries might be possible: 1) Itu Aba Island (BV), and 2) those islands in the Spratlys occupied by China (PRC). None of the Spratly Islands now occupied by Vietnam, Malaysia, the Philippines, or Brunei would qualify as DXCC countries under Point 2(a). It is uncertain whether or not occupation for many years constitutes sufficient evidence of ownership. The Kamaran Islands were cited as an example of a DXCC country that was deleted due to changes in their administration, i.e., they were occupied by the former North Yemen even though they were owned by the former South Yemen.

COMMENTS: In a QRZDX Forum (an electronic conference), KY0A raised questions of possible conflict of interest on the part of KC1AG, implying that it may not be proper for any DXAC member to submit any petition or proposal to the DXAC. W6CF obtained a copy of KY0As remarks and submitted them to the entire Committee. The matter is now being debated within the DXAC.

SOUTHERN SUDAN (ST0):
KC1AG has submitted documentation and a proposal for the deletion of the Southern Sudan from the DXCC Countries List. The basis for this proposal is that the separate administration of the three southern provinces, which was granted under the Sudans constitution, was eliminated sometime in 1985 or thereafter. A vote has been tentatively scheduled for June 1.

DX ADVISORY COMMITTEE REPORT
FEBRUARY 1992
PART 2 of 2

NOTE: Based on February DXAC Report by Ted Pauck, K8NA, DXAC Chairman.
Abridged & Edited By Bill Shipp, KC1AG, NE Division Representative.
(Comments are my opinions, not those of the DXAC.)

II. INTERNAL AGENDA ITEMS

DXPEDITION DISQUALIFICATION CRITERIA:
The ARRL Executive Committee designated the DXAC to research and recommend disqualification criteria for DXpeditions. The DXAC Subcommittee studying this matter is chaired by VE3HO.

DXAC MANUAL:
A DXAC Subcommittee has been formed to develop and present to the DXAC for recommendation an Official Operating Manual. W6CF chairs this Subcommittee and

expects to submit a version to the DXAC by March 10.

ELECTRONIC DXCC CONFIRMATIONS:
The Subcommittee chaired KY0A has recommended that FAX and other forms of electronic confirmation of confirmations not be permitted. Furthermore, the subcommittee recommends that those who may have received DXCC credit for FAX confirmations prior to the suspension be required to submit the normal type of confirmations.

OVERSEAS ADVISORS TO THE DXAC:
K5YY has proposed that the DXAC endorse the concept of non-voting overseas advisors (observers) to the DXAC and recommend that the DXAC Chairman establish a subcommittee to develop an implementation plan.

K8CH, ARRL Membership Services Manager, suggested that the DXAC issue news releases to selected overseas DX societies and solicit information and comment from the international DX community.

Based on this suggestion, W6CF offered an alternative proposal to that of K5YY. Namely, he proposed that the DXAC issue news releases to overseas societies and DX publications, soliciting inputs from individuals and groups. After a two-year trial period, the program should be evaluated to determine whether or not the results justify the continuation of the program. Both of these proposals are being studied, and a vote scheduled for April 27.

III. OPEN ISSUES

The use of electronic mail for DXAC members is being discussed.

The DXCC status of 4U1VIC is being discussed. W6CF has suggested that the matter be put to DXCC members through a referendum.

N0AX requested information regarding specifically why the PTI application for new DXCC country was not approved.

TATAR SSR:
UA4RZ is attempting to obtain a definite ruling from his government on the status of this entity. It will no longer be listed as an open DXCC country application.

ABU AIL:
Dieter Loeffler, DK9KD, has requested clarification of the DXCC country status of this DXCC country. Abu Ail no longer has a lighthouse maintained by the Red Sea Lights Company, which was a British government-managed company. The island andothers in the Abu Ail group are claimed by Yemen. A Yemeni company now maintains a light on Quoin Island in the Abu Ail group.

Comment: It appears that Abu Ail should have been deleted on 1 April 1991.

SNAKE ISLAND:

The DXAC has not received any formal correspondence concerning Snake Island. There have been several DXpeditions to Snake Island that claim it is a

separate DXCC country. Marcel-Radu, DJ0SH, wrote the DXAC claiming that Snake Island is Romanian territory, not Russian. Additional information is requested from anyone having knowledge of this territory.

DXCC CREDIT FOR DOCKED, MOORED, OR ANCHORED VESSELS:
Preston Smith, N6SS/VQ9SS, requested that consideration be given to modifying the DXCC rules to permit participation in the ARRL DX awards programs and contests to stations located on docked, moored, or anchored ships. Likewise, Marvin Whatley, AA4YW, supported DXCC credits for stations on board docked or moored vessels.

COMMENTS: I do not support a rule change that would permit DXCC credits for docked or moored vessels. I note that several who responded to my query on the YCCC PacketCluster supported credit in ARRL contests for vessels. Anyone with opinions on this matter is requested to submit them to the DXAC or to me.

MASTER DXCC AWARDS:
Interest appears to be growing in awards for those who have made Honor Roll and/or have acheived some plateau in the DXCC program. Gary Gaudette, W1GG, submitted a well-articulated outline for a Master DXer Club. Nick Sergienko, RT5UN, proposed an advanced DXCC award for those who had acheived Hornor Roll. Jim Spencer, W0SR, suggested an alternative DXCC, the Second Time Around. All of these proposed awards have considered reducing the work load on the DXCC Desk by various means.

DX WORLD IN 15 TO 20 YEARS:
The Board of Directors has invited the DXAC to gather projections on the world of DXIng in the next 15 to 20 years. Anyone who would like to contribute in developing scenarios and projections for DXing in the future is invited to submit their ideas to the DXAC or me.

299. localizing a transmitter

Newsgroup: rec.radio.amateur.misc

300. Looking for VHF Impedance Bridge designs

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 16:03:47 UTC
From: rdewan@casbah.acns.nwu.edu
Message-ID: <1992Mar24.160347.17387@casbah.acns.nwu.edu>
Source record: 291777

I am looking for VHF/UHF impedance bridge (noise bridge or otherwise)
designs to help in building antennas. I have looked thru the
handbook, Antenna Book, and the Antenna Compendii to no avail.
The closest I've come to it is in the bibliography section of the
Antenna Book:

VHF Impedance Bridge, QEX Feb '88

Unfortunately, none of the local libraries have it. Any help in
locating a copy of the article (I will be glad to reimburse you
the costs of making and mailing a copy to me) or other sources
would be much appreciated.

Another allied question: will I have to build a simple am receiver for
use with the noise bridge. All of the ones that I have are FM.

302. Books on Ham-Radio ?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 16:20:11 UTC
From: rytz@disuns2.epfl.ch
Message-ID: <1992Mar24.172011@disuns2.epfl.ch>
Source record: 291779

Hello,

I got my license a few years ago (in the a**y), but except for
occasional listening to CW (they want me to stay at 25wpm) I have
never been active.

Now I want to give it a try. But instead of learning things the hard
way (i.e. trial and error) I'd like to read just a book (or two),
before having major expenses.

Most legal & theoretical matters were subject of the exams. But I have
no clue about stuff like :
- practical setups & antennas
- packet radio
- communication via satellite
- repeaters
- ......

Is there any up-to-date book that deals with those topics in a (not too)
technical way ?

Thanks in advance.

^^^^^^^^^^^^^^

Whoops! I just talked to Periphex. Apparently, the reference to the touch tone pad on the speaker-mic was a misprint. It is however, a speaker-mic with a BNC for an antenna and has a 3 ft. coiled cord that terminates in a mic/ear plug and a male BNC for RF. Model ASM-6.

Sorry for propogating the error.

Some time ago I asked for information about HF packet radio and what speeds
were attainable. I am still working on that paper. It is coming along, but
I have heard about a new method, Clover. Could anyone tell me a little about
it? I have only heard about it, never seen anything written about it. Is it
promising?

In the '92 ARRL Handbook chapter 'Assembling a Station' there seems
to be some concerns of EM radiation throughout the spectrum, from KW power
supplies emmiting 60 Hz fields all the way through uWave, however they
ARRL tries to maintain two points of view (as any good political organization
does). Firstly, Hams are exposed to relatively weak fields, and any radiation
can be harmful. Under "ARRL Safety Guidelines" they do state: Do not transmit
with a hand-held near your face, use an external mike and keep the transmitter
as far from your body as possible. Use minimum power. They didn't include
any drawings or pictures of 'proper operating procedure'.
They also frowned apon other practices, such as attic antennas and
more than 100W from a VHF mobile. Tissue warming seems to be the prime concern,
but they also caution that pregnant women shouldn't use electric blankets.(Is
a D.C. field less dangerous than a 60Hz field?? A new marketing trick for
'Unborn Baby-Safe' electric blankets!)
Maybe someone from the ARRL has more comments.
de Skip NT1G
P.S. The higher your antenna is the greater your chances are of getting
injured!

>that has been put into the public domain.

There is no such thing. CT is a commercial program, not shareware or freeware. Version 4.25 that Renaissance Software sells was originally a mistake, which the CT author eventually allowed. There might *some day* be a public release of 6.xx, but that has not happened yet.

As a relatively new ham, I have not yet had a chance to join any of the emergency service organizations, and would like to learn more about them. A public service discussion group would be an excellent place for the newer hams to learn about this facet of our hobby, as well as a forum for discussing the present and future roles of these organizations in light of technological advances.

Discussion of experiences in dealing with county/state agencies, both good and bad, will generate enough ideas to help those hams having problems with their system to work them out. This new group has the potential to improve the efficiency of ham emergency services through the sharing of ideas to groups across the country, hopefully many of which will have representation on the net.

In fact, one would think that the lawyers would have enough logic still
left to figure out that, if they admit that their cars are prone
to EMI "damage", and then someone has an accident which could have
possibly been caused by a neighboring car with, for example a police
radio transmitting, that they have by their warnings admitted prior
knowledge of the fault *and still sold the vehicle*. Can you say
high damage settlement? I thought you could.

Hmm. Maybe we ought to go out and all buy rfi-prone cars and then have
crashes (BEFORE we install the radios!) and sue the manufacturers?

Nah, that would be dishonest.... (Even though it would SURE get their
attention! :-)

Rusty - rambling on about nothing in particular...

BTW - our registered domain address now works, hurray.

> I have to say, I've always wondered why there is a Extra class
> requirement for these operators.

When they wrote the rule about extra class operators, they were
thinking about unmanned sattelites. As a result anything over
a certain height over the earth (50 miles?) needs an Extra class.

What annoys me is that why have all these space rules when NOBODY
follows them anyway. Every shuttle mission that has asked for has
received a waiver. When you go for you Extra class test now you
will find all kinds of stupid questions about how much advanced
notice you have to give to the FCC before putting a space station
into operation. First, only about a dozen people in the country
launch space stations, so this is a really stupid part of the rules
to devote a few qustions on. Second, when I talked to one of my
local AMSAT guys (one of the dozens invovled in launching sattelites),
he said they never bother with the advance notice anyway.

318. Looking to trade for an IC-2AT HT

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-24 18:48:07 UTC
From: marshall@hplsla.hp.com
Message-ID: <20360077@hplsla.hp.com>
Source record: 291792

Hello all,

I just received my Technician class ticket in the mail the other day......

N7WVF !!

So I guess I need to grab some equipment!

I am looking to trade for an ICOM IC-2AT HT. I have the following two items
available for trading.....

The first is a Zoom FAX/Modem. It is 2400 modem and 9600 S/R FAX. This is
the external version and includes BITFAX software. It is about a year old
so I believe that there are 6 years left to the 7yr warranty. It works as
new, but I think I would use an HT lots more than I have the FAX.

or

The second item is a Bearcat Scanner BC 580XLT. This is a 100 channel
scanner which covers VHF low and high, as well as UHF, marine and
aircraft (AM). It is considered a mobil/base although I have always had
the thing as a base. It comes with a 12VDC power pack which plugs into the
wall outlet. This also works as new.

Since both of my items have never left the house, they are pretty much in
new shape. I realize that HTs will get bumped around in normal use, but
I don't think I would be interested in trading for a unit which is held
together with duct tape :>)!

If any of you are interested in a trade, please let me know! I am ready
to start chatting on 2m.

Best regards,

Recently a message appeared with details on how to download .ZIP files by
using LISTSERV commands instead of FTP. I do not have FTP at this time so
this was welcomed information. I tried out the sample command included in
the text and it worked great. Only one question. I now need a program
which will decodet he uuencoded data.

One more question....Is there a listserv command that will allow me to
receive a directory of the public domain software available from a site.

Any help will be appreciated.

> with the tuner I've been able to get 1.1:1 on the Novice subbands
> on 10M and 40M.

You have a hell of a mismatch there. When you build a multiband
dipole like that, they fact that multiple legs are there do affect
the lengths. A good reference for the right lengths used to be
in Tune In The Worms (World, sorry). There's was a verticle, but
you get the idea. You're feedline is probably radiating all over
the place. I tried to build a real kludge antenna like that when
I got on the air the first time because it was raining outside.
This accounts for the RFI and the RF feedback. We toasted a keyer
playing with ours.

Using a tuner to force an SWR out of such an antenna is a losing
proposition.

I'd suggest you prune the antenna, or better yet, build two
separate dipoles. I had a lot of DX success with a 20 M dipole
in the attic. It ran along the main heat duct (metal) as well.

People also need to learn not to expect any sort of predictable
directionality out of dipoles so close to the ground and other
ground like objects.

> The title says it all - What happened to the Russian Woodpecker
> and when did it go away?

I guess the Commonwealth of Independent States can't afford the electric bill anymore. Either that or the Arlington 10-10 chapter took the "unilateral action" they were threatening in last months newsletter.

-Ron

P.S. I've founded a society called 2-2 International. To join all you have to do is make 2 contacts on 2 meters. (I didn't want the codeless techs to be left out). You don't have to talk to other 2-2 members. Send me a SASE and I'll send you a certificate suitable for framing with your 2-2 number on it. Just to make things easier, everyone gets the same 2-2 number (and yes, the number is two).

Ron (good in the book) WO2L.

|> 73 de Kevin, WB2EMS kfeeney@helios.tn.cornell.edu

Well, let's take a look at this problem to see if we can easily come up with a formula that will give us a reality check.

The power flux (say, watts per square meter) at a distance R from your transmitter is:

$$\frac{Pt*Gt}{4*pi*R^2}$$

Pt is the power going into your antenna, Gt is the antenna's gain over isotropic.

The shuttle will intercept some portion of this flux and then re-readiate the collected power in some pattern. We want to know the shuttle's radar cross section (RCS). Undoubtedly this is known, but let's make a couple of simple assumptions which, in combination, will be somewhat pessimistic and thus give us a conservative estimate. For more details on RCS see Skolnik's "Introduction to Radar Systems."

Let's say the shuttle is a rectanuglar plate perpendicular to the direction of propagation (tough to do with respect to both the transmitting and receiving stations, but let's not worry too much). The plate area is As. Let's also assume the shuttle re-radiates isotropically. In reality, it probably does have some directivity.

The power collected and re-radiated is:

```
Pt*Gt*As
--------
4*pi*R^2
```

If we assume the transmitter and receiver are equidistant from the shuttle, the the power flux at the receiver antenna is:

```
Pt*Gt*As
------------
(4*pi*R^2)^2
```

Notice the factor of 1/R^4. This is what makes radar difficult.

To find the power collected by the receiver antenna, we multiply the flux by the antenna's effective area, which in terms of the gain and wavelength equals Gr*lambda^2/4*pi. Thus:

```
Pt*Gt*As*Gr*lambda^2
Pr = ----------------------
(4*pi)^3 * R^4
```

The value of Pr we require is:

```
Pr = k*(Ta+Tr)*B*SNR
```

```
k = 1.381x10^-23 joules/kelvin <= Boltzmann's constant
Ta = Antenna (Sky) Noise Temperature
Tr = (290 kelvin)*(NF - 1) <= Receiver Noise Temperature
NF = Noise Figure expressed as a ratio, not in dB
B = Receiver Noise Bandwidth in Hz
SNR = Signal-to-Noise Ratio, expressed as a ratio
```

Let's plug in some numbers:

```
Ta = 200 kelvin (say we're not staring into the Milky Way)
2-dB noise figure => NF = 1.585
300-Hz bandwidth for CW
6-dB signal-to-noise ratio => SNR = 3.981
```

```
Pt = 100 watts
13-dB Transmitter Antenna Gain => Gt = 19.95
As = 120 ft X 80 ft = 9600 ft^s = 891.9 m^2
lambda = 2 m (I guess you want to do this on 2 meters)
R = 500 km
```

The transmitted ERP is thus 2 kW. The two stations are assumed to each be 500 kilometers from the shuttle. We can copy CW with less than a 6-dB SNR, but this gives us some margin for error.

Using k, NF, B, and SNR, we get Pr = 6.095x10-18 watts. Plugging this in to the previous equation and solving for Gr, we find our receiver antenna gain needs to be 20 dB.

I'd say using the shuttle as a reflector between modest stations is indeed feasible, at least using Morse code or other digital modes. A pair of meteor-scatter type packet stations would be interesting to try. To use SSB, I'd say you would need another 14 dB in the path budget. If the shuttle were 1,000 kilometers from each station (I think that's possible) the budget would need to be increased by 12 dB. We could pick up the 12 dB by increasing the transmitter power to 1.5 kW. Using 24-dB antennas at each end would give us the other 14 dB. This should be a cinch for a couple of good moonbounce stations, assuming they could slew their antennas fast enough.

Is anyone going to try this?

Hoping I didn't make any blunders,

Bill Chiarchiaro N1CPK

A mistuned dipole will tend to have lots of RF current flowing on the
outside of the coax shield of the feedline. If you trim the
multiband dipole to resonance on each band, you may find that the
RFI problems go away.

In March issue of CQ Magazine, dave ingram, k4twj, had review of
mfj's new qrp 20 meter qrp transceiver. one problem (and it really
irks me to no end) is that he forgot (or maybe he didn't) to mention
the price.

any of you in netland have information on this topic? all calls to
mfj result in a busy signal. guess they can't afford more than one
phone line in/out......

how about a price on the quantum battery too?

of course, i've been told if you gotta ask the price you can't afford it.

:-)

Dear David,

I am a member of a local municipality planning board in New York andd have had some experience with towrer issues.

The local law you addressed seems only to concern itself with notification procedures. These are required by State law. My Town notifies anyone within 500 feet of the affected property when a Special Use Permit is applied for or when a variance to the zoning law is asked for. The costs area paid for by the application fee.

My experience over the last two plus years is that emotion based commentary is not rated very high by planning / zoning boards. Professional, well prepared FACTUAL information is appreciated - whether it is pro or con the issue. Planning and Zoning Boards are rarely comprised of members possessing significant technical knowledge or skills. My Town is in a rural area and the Planning Board is comprised of a retired school teacher, a manufacturing manager, a dairy farmer, an environmentalist for a utility company, a person retired so long everyone forgot what he used to do and myself - the "Techky" (I'm actually a marketing manager but have a EE background)..

We have not come to grips with PRB-1 -- yet. Actually, ham towers are in a quiet zone - not expressly forbidden or permitted. Windmills and wind powered generator towers are in the code - but not radio towers. It is actually up to the Planning / Zoning Boards as to whether they want them included by intrepretation or not. It is usually best to let a sleeping dog alone!

We did have a considerable ruhbarb over the location of a proposed new AM broadcast station (1,000 watts ERP). SInce this type construction is not addressed in the code, a Special Use Permit process was required. The first thing was compliance with the NY State Environmental Quality Review Act (SEQRA) which required the preparation of a complex (3 inches thick) Environmental Impact Statement. Then followed a public hearing where most of the residents nearby and some from several miles away objected with expectations of RF radiation damage to themselves & children & pets, tales of refrigerators & stoves "talking"' to them and on and on. In short, the broadcast station was fine as long as it was located near someone else's property, not theirs. These comments were largely ignored as they had no basis in fact. I supplied a ANSI study on efects of RF radiation which negated any concerns about RF at AM Broadcast frequencies.

The real bone of contention was the affect of the towers on nearby real estate property values. We had conflicting "expert" opinions. We required the applicant (and the opposition if they chose to do so) to professionally research the topic and present evidence. The applicant presented evidence that property values were not adversely affected, the opposition did not present any

evidence beyond their original submittal.

From an environmental standpoint, we found that the towers did detriment the visual environment (they are UGLY - but so is a power substation!) but that issue was unavoidable.

We granted the permit in the face of a threat of a lawsuit from an adjacent landowner, past member of the Planning Board. He never sued.

Your task is one of education and dealing in facts. Present PRB-1 and the case for ham radio and radio communications to your Board. Be pleasant but persuasive. Keep the technical details simple and to the point. You may not win every encounter but you'll win your share.

73, Wayne KB6CSP

-----[cut here]---

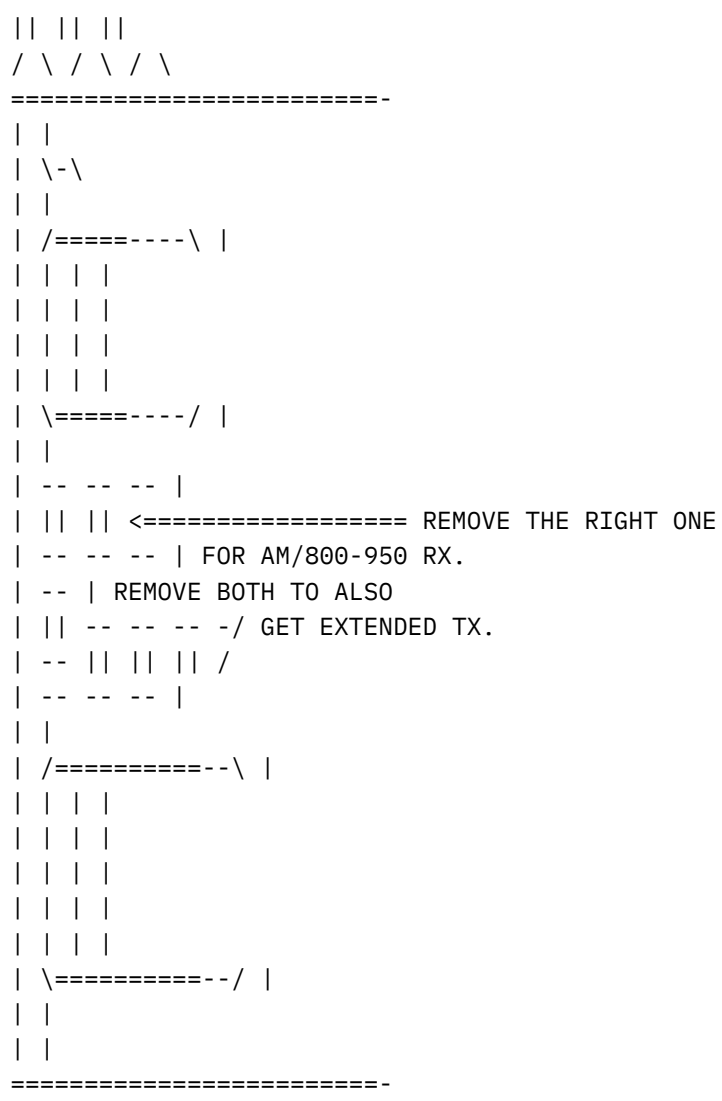
Kenwood TH-77 Extended frequency coverage and dual-band repeater

----
relayed by n2ixl, from bitnet infohams digest,v90n433

Kenwood has made this radio compatible with the new ICOM S-Series radios
from what I can tell. It has DTSS (Dual Tone Squelch System) which means
that your radio will not break squelch until it hears a particular
sequence of three DTMF tones (ICOM has this also and they call it
Coded Squelch which also use three tones). The TH77A also has a paging
function that works *exactly* like the ICOM paging. You program the
radio with a personal 3 digit DTMF code and someone pages you by
transmitting YOUR 3 digit code, followed by a * character and then
their own 3 digit code. The ICOM will start to ring to let you know
that you have been paged and display the 3 digit code of the person
that has paged you. The TH77A will beep once and open squelch as
long as the person that paged you does not drop carrier (I prefer
the ICOM method for this part, but there is a work around that I
will mention in a bit). One thing the TH77A does at this point is
bring up a timer so you know how long its been since you've been
paged. Maximum time is 99 hours and 99 minutes.

Let's see if your
battery can hold out that long! The workaround so the TH77A will
ring, rather than just beep and open squelch is to put the radio
in the pager mode AND also put it in Tone Alert. When you get
paged... the radio will "beep beep (pause) beep beep" five times
and start up the timer. Kenwood has provided two different types
of BEEPS for you. The second type is to ring like an electronic
telephone. This one *REALLY* sounds nice!! For those of you that
like autodial memories, there are 10 memories that can store 15
characters each. There are 40 regular frequency memories in this
radio and you can make them all UHF if you like (no restriction).
NOW! On to the *EXTRA* capabilities (there are other BASIC functions
that I didn't mention, those were just the highlights).
After making a few modifications to this radio, you can get it to
do the regular stuff that the IC24AT will do, such as AM aircraft,

expanded UHF (400-512 depending on PLL lock) and 800-950 (again,
depending on PLL lock) in addition to cross band repeat.
HOW DO YOU DO THIS!?



Layout shown with electrolytic capacitor C124 removed
The best way to do this is to heat up both sides of the resistor and
push it out of the way with something small. At least this was the
best way for me! Once it's out, put the capacitor back in place and
close it up. (Put the green wire back also, if you are making the
out of band TX mod too!)

>
>I have to say, I've always wondered why there is a Extra class
>requirement for these operators. ....

The reason for the requirement is that the rules for space operation are included in the extra class exam. If the intent was to open space operation to anybody who felt like going to space :-) :-) then they'd have to test for space operation on the Novice exam.

Since most space operation is probably remote, such as Oscars, it seems appropriate to require that the licensee know the rules for such activity. When the time comes to send a manned space expidition with amateur radio, it seems easy enough to waive the requirement.

Needless to say, when amateur radio operation during space travel becomes common, and people are mounting ham transceivers in their personal ships, the FCC will probably have to test for the rules and regs in lower classes of license.
* * *
It's interesting to compare the advanced written exam and the extra exam. The advanced exam contains follow-on material in the same topics covered in the general exam. It's said to be the toughest one offered. The extra exam contains basic and intermediate questions about NEW topics. Space operation, facsimilie, television, basic orbital mechanics, and LOTS of rules and regs related to licensing, testing and priveleges.

The extra class examinee (and to a lesser extent the advanced class examinee) is tested partially as an operator and partially as an examiner.

I see two possible causes for the RF getting into the shack.

First, it looks like there is no balun at the center of the
dipole. Second, I'd bet that the feedline, due to attic constraints,
doesn't form a right angle with the dipole for any appreciable distance.
Each of these will contribute to the presence of RF on the outside of
the coax shield....a Bad Thing.

Fix these two things, and I'd bet that not only will the RF problems go
away, but the SWR will also drop waaaay down.

Excuse me if I've missed it, but ...

Does anyone have any news on the status of Slovenia as a separate DXCC country? Has there been a formal petition yet?

It seems to me that if some rocks out in the Pacific or Arctic oceans qualify as "countries," a nation with its own flag, anthem, stamps, currency, language, government, border checkpoints, & Olympic team ought to count as one!

Latest word I heard is that Slovenia will be getting a new prefix -- an "S" followed by a single number (tentatively S1, S2, S3, and S4).

Interesting, I've never replied to my own article before...

In article <1992Mar24.000542.5749@sv001.sandiego.ncr.com> kevin@sv001.sandiego.ncr.com (Kevin Sanders 3602) writes:
>
>My technician license was drawn from a 2 x 3 pool, not a 1 x 3. I believe
>that only *general* licenses here in Six-land are taken from a 1 x 3 pool.
>

Thanks to all of you who sent me mail on this, I stand corrected. We in
6-land must have at least an *advanced* license to get a 2 x 2, all
1 x 3's are gone. Generals get a 2 x 3, just the same as novice and tech.

And I thought I could get a shorter callsign with a general ticket :-(
Guess I'll have to upgrade...

Apartment available May 1 on Oakland, near the University of Pittsburgh.
It has a multiband vertical R5 on top of the building which is 7 stories
high, with no obstacles around. This antenna is high and on the clear.
Work plenty of DX as my logbook shows!. If interested respond by
e-mail or call 412-6835178.
Ah! The apartment has two bedrooms, two bathrooms and is on the sixth
floor. It has microwave, diswhasher,.. you name.. and it has
ANTENNAS!!. Be prepared for a >$700 a month rent.

Juan , NA0B.

> First, it looks like there is no balun at the center of the
> dipole.

A balun wouldn't help with this mismatch. Sure it might keep
the RF out of the feedline, but it's likely to cause all kinds
of other RFI problems and may destroy itself in the process.
Read W1FB's tirade on baluns sometime (in the W1FB Antenna
Notebook).

> Second, I'd bet that the feedline, due to attic constraints,
> doesn't form a right angle with the dipole for any appreciable distance.

Piffle, with the ground, solar colectors, and ducts and stuff that
close to the antenna, the coax not leaving at a right angle is the
least of his problems.

It would help if he put something approaching a resonant load at
the end of the feedline the 492/f estimate is for wavelength is
too far off for the design of his antenna.

In my opinion Doug DeMaw W1FB has a lot of really great straight forward stuff for new (and old) hams. The books are published by the ARRL and have names like "W1FB's Antenna Notebook" and "W1FB's Help For New Hams" and the like.

Message-ID: <1992Mar25.045229.12649@magnus.acs.ohio-state.edu>
Source record: 291823

I just started trying to operate on HF while on breaks at work. What I've currently acquired, is a Hustler bumper mount, the folding mast, and a 75 meter resonator. Rather than continue to use my Yaesu FT-101EE in my car (It tends to take up most of the passenger side), I'm looking for something used which will fit under the dash of my Buick Regal.

One such radio I'm looking at, is the Yaesu FT-301. Does anyone know how much these things run for? I don't even know how much one would go for at someplace like Dayton. I'd also like any suggestions for alternative radios.

Thanks and 73 de Bob, N8MMR

347. Re: young hams

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-25 05:07:11 UTC
From: davros@ccwf.cc.utexas.edu
Message-ID: <69063@ut-emx.uucp>
Source record: 291824

Well, I'm all for younger hams. And I also agree we need more yl's but definitely
we need young people. I got into ham radio at the age of 14--all by myself--well not really 'cause I had some help--but I got interested all by myself and have no other hams in my family and no one interested either. Fine with me--more rig for me to operate. But I have to buy all my own equipment (or otherwise acquire it). :) I'm now an Extra class ham who enjoys cw, and I'm 18. I've noticed very few young hams in this country and have talked to almost none of them. It doesn't bother me though, I enjoy talking to all of these old guys on the radio. :)

Anyway, I'm not a science person, nor am I a math person. I am a writer, majoring in Public Relations actually. I just saw radio as something neat. I saw it as something mysterious and neat and lots of fun besides. I wanted to meet new people all over the world. With or without the code, I'd get it. I thought I'd hate code but now I operate it almost exclusively. But I digress. The book that interested me was "How To Become A Radio Amateur", Copyright (Ready for this?) 1950. Didn't understand a word of it--or at least not many words--but I thought it was interesting anyhow. To this day I still love old tube radios.

But I'm not here to pass on how great ham radio is, because we all know that already. It's a fine thing to wish that kids would get interested in ham radio. It's a fine thing to want them--it's a start anyway. What we need (and there's a good beginning) are books. We have the books, but they're not in the libraries. The UT radio people I think will start working on that one. Here at least anyway. We need to show kids what it is. I started studying before I saw any ham radio stuff. Before even I heard any ham radio. But that's important as well. We need to find the kids who find radio as fascinating as we do. A dying breed we are, too--what with the instant nature of computers, free modem connects that will get your message across the world with little effort applied and the like. These kids are out there--the ones who find radio interesting, the ones who want to work for something important, the ones who will make our hobby grow. I'm (I think) a prime example of that. I began as someone who said, (When I was ten) "Huh? You can't play music on ham radio? What do you mean? What else is there on the radio?", someone who didn't understand the beauty of code, glowing filaments, and the like, who didn't grasp how radio works and didn't care, who wanted nothing really except something interesting to do, and I am now someone who enjoys ham radio to the fullest, who
participates in public service, someone who understands the beauty of radio in all its forms. I have grown up a lot in these four years, and I owe part of it to my ham radio friends. They encouraged me, they helped me. But more than that, they treated me as an equal, not as a little adolescent kid. That's important I think. It is to me, anyway. Yes, they knew that I was a student

and a youngster at that, but it didn't matter. This is where ham radio operators are special. We overlook such things (usually--but we're human too) as age, sex, persuasion, handicap, or what-have-you. But again I digress. We need active young hams. Not just young people with Amateur licenses who got them 'cause Daddy got his and so they did too.
(You see, I strongly believe that there's a difference. "Ham" is an attitude, as I've said before.)
We need young industrious people
who are interested in radio for its own sake, or in what it can offer. Anyone still with me?

This is the longest article I've ever posted probably, and sorry about the wasted bandwith, but jeez. When you get carried away ...

Let's work with those young people and see what happens.

>at it.

Do you know which Japanese company makes the HT for RS? I've got nothing against Japanese equipment, most of mine is Japanese. What I was complaining about was the tendency for wideband receive equipment to be subject to intermod. Note that Icom made fine *narrow* receive ham HTs in the past that didn't suffer from these problems, and their commercial offerings still work great. Motorola, of course, still makes fine equipment.

This whole trend by the ham manufacturers to make wideband scanners out of *communications* equipment is a pain to those of us who must use them in high RF areas. I keep two HTs available, a Japanese dual bander and a GE Mastr HT. The GE works everywhere, but only has two frequencies, and I can use the bells and whistles HT in lower RF areas. Since I have no need of out of band capabilities, I'd like a bells and whistles dual bander that *only* passes the ham bands. That doesn't seem too much to ask of *ham* equipment. If I want a wideband scanner, I'll buy one.

>for it!

Well 1000 stations with 45W each is 45kW of Noise. More realistically
there will be maybe 100 stations at a time, each with say 1kW of ERP
directed at the satellite.

All these signals are incoherent, so does this mean the power adds as the
square root or is it some other formula ?

Assuming it is square roots, probably wrongly so corrections please-
to be 10 dB above this (to be heard) you will need 100kW of ERP.
Now as you say 20kW is enough either there are not 100 stations, or
they are using less ERP (maybe not tracking accurately), or I got the
formula wrong.

No, all Novice, Technician, and General in 6 land (and 4 land?) are issued 2x3 calls. The reason? There are no 1x3 calls left to be issued in those areas.

The only way to get a shorter call in 6 land is to upgrade to Advanced, Which will buy you a 2x2 call (KM6@@), or Extra, which is also 2x2 (AB6@@).

A few months ago, QST, 73 Mag, Radio Electronics, and possibility other publications contained information on the current space shuttle mission ATLAS involving the VLF experiments (ie. 50Hz - 70KHz transmissions from the shuttle). Some of the articles encouraged hobbiests, amateur scientists and amateur radio operators to build VLF receivers (which I did), monitor the experiments and report on the results. The problem is, I have not herd any details of when to listen published anywhere. Does anyone have any information on the ATLAS VLF experiments? Thanks in advance.

> If you're not the biggest, you may not be heard at all.

Ron Parise (WA3SIR), the first guy to attempt to work Amateur FM from the shuttle says that an FM pile up yields "silene" frequently. Sometimes it's not neve the strongest guy who wins, sometimes no one wins.

> Icom cigarette lighter. The unit will work on, but the PL tone
> gets noisy when the engine is running and the unit in on high

Why ? I haven't opened the lighter adapter, but it appears to contain
only a choke and a capacitor. Are there some active components too,
or does the choke saturate too easily ? Or is it because only the
hot side is filtered, possibly when the aerial connection bypasses
ground-side filtering.

I worry about connecting the power ground and the aerial ground to
the chassis, then sending RF up one lead and pulling a couple of amps
down the other. As well as this, the voltage drop across the two chassis
points will vary with the car's chassis-return currents.
I had problems with ground noise when I tried to use a Yaesu HT with
a car-powered audio amplifier and an aerial lead whose outer was grounded
at the aerial mounting.

Perhaps the aerial outer is isolated in the HT as it is in some mobile
rigs : I haven't checked this.
However, I'd like to know what the aerial mounting system is on the car
installations that have been compared. Are they earthed at the aerial
end, or are they magmounts ? Or rusty ?

I use the HT with the Icom adapter and a rubber ducky at the moment.
Works fine, on both bands. But I want to fit a boot-mount aerial ....
(The car's an '87 VW Jetta. I don't know if it's called that in the US -
it's the saloon version of the Golf / Rabbit).

I new when I put this letter out that I would get a response like this.
According to a type written letter concerning the P/D of CT version 6.26
has been available sin February 1991. I have only found this PD version of CT
in one place, on a private BBS System. I am looking for this software via
the internet so if someone could please help me I would appreciate it very
much.

Send all E-mail directly to me at:
sims@sauron.msfc.nasa.gov

Thanks again.

363. 3 new extras under 16 in same family

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-25 14:47:50 UTC
From: cberthel@cc.utah.edu
Message-ID: <1992Mar25.084750.1@cc.utah.edu>
Source record: 291687

On the Utah VHF Society net last night, the announcement was made that we had five new extra class hams in the valley from the previous night's VE testing. Significantly, three of these were under the age of 16 and from the same family. I didn't catch their first names but the Zitting boys, ages 13, 14, and 15 all passed extra. Their father, Marv Zitting, here in Salt Lake area was on the net and someone asked, "How many extras do you now have in your household?" He said about 10! That must be a record. Ten extras in the same household! Certainly a feat worth publishing. Also should provide some motivation for those you feel that can't do 20wpm code. BTW. I heard Marv Zitting talking later and mentioned that "his daughters" frequently do CW on 40 meters so assume some of those extras in his family are young ladies. Anyone with access to an alphabetic index of callsigns might like to look up "Zitting" in Utah and tell us what calls you find in the same household.

>Except this is FM, not SSB. Capture effect says biggest signal wins.
>If you're not the biggest, you may not be heard at all.

It's even worse than that. It's not sufficient to be merely "stronger". You need to be stronger by an appropriate amount (the capture ratio, which is about 10-15 dB for FM) than the sum of ALL other signals. Otherwise the receiver just hears mush. Given a sufficiently large number of uplink signals, the probability of one actually capturing the receiver tends towards zero.

Now if they were listening at random on one of a very large number of uplink channels, or better yet, using spread spectrum with some reasonably high processing gain, they might actually be able to make SAREX work in its "free for all" mode.

I think SAREX is best reserved for the prearranged QSO-with-schools type of contact. I just monitored both sides of a QSO between a local San Diego school and STS-45. It also got live coverage on at least one local TV station. This sort of thing benefits ham radio much more than just running SAREX as a glorified DXpedition, in my opinion.

In past years, and I presume it will continue, Delta has had a booth right at one of the main exhibit hall entrances where they will take almost anything and ship it home for you. They will even pack stuff for shipping. The only restrictions (if any) are hazardous materials and cost (the costs quoted looked very reasonable to me last year but I don't remember what they were).

369. FT470-mods

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-25 16:10:50 UTC
From: plkorhon@vipunen.hut.fi
Message-ID: <plkorhon.701539850@vipunen.hut.fi>
Source record: 291693

I think everybody knows about the mods you can do for FT-470 to get it
receive just on any frequency from 0 MHz to about 1500 MHz. (the receiver
is sensitive only on abt. 100-200 MHz and 400-500 MHz, though)
I recently did the modification and found something interesting: when
scanning somewhere between 180 and 190 MHz I found - big surprise - a
clear 59+ signal there. But then I noticed it was our 2m-repeater operating
on 145.675! Sure it doesn't have harmonics there, hi.

So does the mod really work? When the screen shows a frequency of 180 MHz,
is it really receiving on that frequency??? Seems not...
Another thing I noticed is that when I have ARS (Automatic Repeater Shift)
on, the shift gets on once in a while when scanning from 100 MHz to 200 MHz.
This may not anything to do with the previous problem, though.

Anybody else experienced anything like that?

Not so, Version 6.26 is a shareware release. It is available on W6GO's
DX-BBS (916-992-0923). It was placed on the BBS by K1EA himself. If you
try it, you will want to have the latest version. I don't know if there
are any sites where it can be FTP from the net.

Phil, are you still involved with the biggest repeater club in the world (AMSAT)? Tell Bill Tynan about this; he still appears to believe that SAREX is for the hams, not the kids.

(FWIW, I agree with you... but nobody pays any attention to me anyway. :-)

Consider the Yaesu FT-707. This is an all solid-state, 100 watt rig from around 1980. It is about the size and general layout of an FT-757 (the tuning knob is on the right instead of in the center, though), and has passband tuning and 16 pole IF filtering, but no memories or scanning; just a basic sort of radio. They go for between $300 - $400, and are one of the best buys on the used rig market. I have one, and am quite pleased with it. My wish list for it is short: a dial lock, and a real S meter instead of LEDs. There is an external mamory unit (FV-707DM, around $75, used, fits under the radio, adds about an inch of height) if you can't live without memories and scanning. Good luck and 73...

380. Hardware to download HF weather maps

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-25 18:33:08 UTC
From: marc@neptune.uucp
Message-ID: <562@dwp.la.ca.us>
Source record: 291704

I am interested in downloading weather maps that are regularly broadcasted over HF frequencies.

There are number of commercial products out there that do this but I am interested in writing my own software (using Borland C++ & Application Framework) to the job. Each of the commercial products appears to provide a hardware adaptor to deliver the audio output to the computers RS232 port. I imagine some sort of demodulator is also included.

I would like to build my own adaptor and would like any appreciate any pointers on where I might find the plans for such a device.

Thanks

Marc

Here's what marvin had to say about the name "Zitting" in Utah.
I gather the family moved in 1989, 1990, or 1991. Look at the
birthdates for three pairs: Nancy and Vilate, Edna and Laura, and
Charles and John. Pretty interesting!

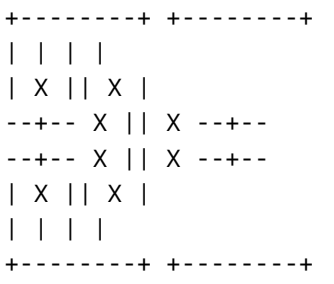
A transformer will do this:



>This is an example of "coupled harmonic oscillators" in which the
>initial energy (all on the left, say) will slosh over to the right and
>back. ...

Ooops. This is a problem with writing test questions. I want it to
stay in the second cap! (You don't really need a transformer...)

I wonder if the author of the book ever realized that the cubical quad was invented at HCJB to deal with corona problems at their station location in the Andes?

Aren't there some crackpot books out there claiming that there is a secret UFO BASE in the Andes?

I think if Bruce Cathie had done a little more research, he could have come up with a much better conspiracy theory!

I didn't mention it in the earlier post, but further in the book he noticed that some of these locations where the lines crossed were not in residential areas. He went to these locations, and sure enough....right there on top of the building was one of these eerie looking HF cublical Quads or (gasp!) something that sounds to me like a Yagi! (He described the "other" {Yagi} antenna as being 'like a TV antenna with elements on a boom, only bigger).

He then babbled on with an elaborate theory about how these must have been "beamed down" by alien spacecraft!

I would like to know how to get one of those ships to visit MY neighborhood!

I guess I should make one of those maps, and then move to an unused location where the lines cross!

I like the way all of this parallels Erik Van Daniken's CHARIOTS OF THE GODS,
where the author explains away many wonderful archaelogical artifacts
by claiming that they could only have been done with the help of advanced
alien civilazations!

> callsign pending

Using the data that Alan Brubaker supplied in a later posting, there may be
more than one family in this household (or more than one wife!) :

Name Date of birth
-------- -------------
Marvin 12/9/30
Rhea 2/23/40
Nancy 10/6/68
Vilate 11/7/68 Note: only one month after Nancy
Margaret 3/24/70
Edna 3/10/72
Laura 4/22/72 Note: only 1/5 months after Edna
Elvera 10/10/75
Charles 2/5/77
John 4/4/77 Note: only 2 months after Charles
Paul 7/1/78
Clarence 6/27/80

I checked mailing addresses to verify it's the same family. There were two
different mailing addresses but they were one address for pre-7/25/89
and another for post-5/22/90. Perhaps some of the children are adopted.
I know several large families who got large that way. It's great to see
family involvement in something educational like amateur radio.

391. VHF Marine Radio Licenses: Who Needs Them?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-25 21:11:41 UTC
From: mgknn@cbnewsk.cb.att.com
Message-ID: <1992Mar25.211141.27946@cbnewsk.cb.att.com>
Source record: 291717

I am looking for answers to the following questions:

1. ARE RECREATIONAL BOATERS REQUIRED TO OBTAIN AN FCC LICENSE TO LEGALLY OPERATE VHF MARINE RADIOS FROM THEIR BOAT ?

2. ARE RECREATIONAL BOATERS REQUIRED TO OBTAIN AN FCC LICENSE TO LEGALLY OPERATE VHF MARINE RADIOS FROM LAND LOCATIONS TO THEIR BOAT ?
IF SO, IS ANOTHER LICENSE REQUIRED FOR THE LAND BASED RADIO OR HAND HELD RADIO ?

I have herd people state that it is imperative to have a valid VHF marine radio license in possession if/when the Coast Guard/Marine Police conduct an inspection of your boat. "HEAVY FINES WILL BE ISSUED IF YOU HAVE A VHF RADIO AND DO NOT POSSESS A VALID VHF MARINE RADIO AT THE TIME OF THE INSPECTION"

I have also herd people state that recreational boaters are NOT required to obtain an FCC license to legally operate their VHF marine radio. (From boat, from land to boat or from Hand held to boat)

I understand that there is a FCC license application form for VHF marine radios. Who must apply for one? I was told that the FCC license form states something similar to "ALTHOUGH VHF MARINE RADIO LICENSES ARE NOT REQUIRED FOR RECREATIONAL BOATERS....."

Does anyone know the correct answers to these questions or know the FCC office I can call to get the correct answers. Thanks in advance.

>Now, is this possible with the car alarms? Is it possible to transmit a
>variety of freqs until hitting on the right combo, thereby causing
>activation/deactivation of the alarm?

I dont know if it is possible to transmit a variety of frequencies
trying to find the right one, but I do know that a "learning remote"
designed to allow you to control your TV, VCR and cable box from
the same remote was able to learn the codes to unlock the doors and
control the alarm on my friend's Honda Accord EX. In fact, to this
day, the fast forward for VCR #3 on my learning remote will unlock
his doors, and the stop button will turn off his alarm. Hmmm....

I think you missed the obvious. All the kids have either a middle initial
of either W. or S. If you split them up according to middle initial, you
can see what was probably two families. A merger probably occurred due
to death of a spouse and/or divorce. Remember THE BRADY BUNCH on TV.
I don't know if this is the correct explanation or not but it doesn't
matter to me. It think it's a pretty amazing family to have so many
attain EXTRA class license.

Can we say, "The family that hams together stays together?" I like that
idea. I just got into the hobby myself and am waiting for my callsign.
I've convinced my sisters in California that this would be a good hobby
for them and their families. So soon my 2 nieces and 2 nephews (ages
10-16) will be hams. I think it's a great family hobby!

WHAT THE HELL??

A learning remote is *infrared*. LIGHT.

Any decent car alarm is *radio*. The Honda's remote is IR? Gack!

There *is* a cpu in the learning remote that could put out RFI, but I
really doubt that the noise pattern could look like a key signal code,
and the harmonics from the xtal be on the frequency of the alarm carrier.

Methinks you forgot April 1st is still 7 days away.

|>
|> There is a formula for this, but I'm gonna do it the old fashioned
|> way rather than looking it up...
|>
|> ... stuff deleted ...
|>

There are some problems here.

First, there is no mention of the wavelength. The gain of the receiving antenna is given, but the capture area of the antenna is a function of gain and wavelength.

Second, the statement "Assume 25% reflected in direction" is loose. If it were taken to mean that the shuttle reflects 25% of its intercepted power to the receiving antenna, then the shuttle would have a truly enormous radar cross section. However, it does look as if your calculations were based on the interpretation that 25% of the intercepted power is re-radiated isotropically. This is fair enough; maybe the other 75% is heating lossy material on the shuttle or perhaps your receiving antenna is in a null of the shuttle's scattering pattern.

My calculation for the received power (using the formula I posted yesterday) with your given values and a 2-meter wavelength is -133 dBm. This includes the assumed 25% loss in capture and re-radiation on the shuttle's part.

Without even considering the receiver noise figure or sky noise, you're left with only a 6-dB SNR in a 3-kHz bandwidth. For the given transmitter and antennas, you'll probably want to narrow your bandwidth, perhaps to a 1.8-kHz SSB filter or a 300-Hz CW filter (yea! rah! CW!).

> One such radio I'm looking at, is the Yaesu FT-301. Does anyone know how

I didn't think these things were all that much smaller than the FT101EE
you're trying to replace. The FT301 didn't particularly enjoy much pop-
ularity and market life.

If I were you, I'd look for a used Kenwood TS130S. The mobile mounting
bracket is kinda rare, however. I've had my 130 over ten years without
a hint of trouble and the Kenwood BBS doesn't have any service bulletins
issued against it.

I hope you're using the KW version of that mobile antenna. If not,
transmit into your low power version for a solid minute and feel how
hot the loading coil gets.

From: dxandy@cs.widener.edu
Message-ID: <199203252217.AA05114@ashley.cs.widener.edu>
Source record: 291724

Hi!

I am looking for a 2m HT that will pick up the AM airband
frequencies of 118MHz to around 133MHz. I only need this for receive.
I saw an ad in 73 magazine that states that the Alinco DJ-162 will do
this with a simple mod. How simple is this mod?

I stopped by my local Ham store and saw a DJ-F1T, but I didn't
really have time to quiz the salesperson about its capabilities,
so if someone could give me an idea about what it can do, I would
appreciate it.

If one of these radios meets my needs, then I will be selling my
DJ-160 to help raise cash. If you are interested in buying it, please
email me.

Thanks!

73, de

From: johnh@eng.auburn.edu
Message-ID: <johnh.920325221843@hertz.ee.eng.auburn.edu>
Source record: 291635

Sounds neat! I'd be glad to try when I move to a place where I can put up an OSCAR beam. (Possibly in a few months) How would Mir work as a passive reflector? Probably doesn't have all those RF absorbing tiles on it. And it tends to remain in orbit longer than the shuttle. Won't Freedom make a great reflector?! This is justification for its existence to me.

That gets posted here once in awhile, and I highly recommend it. I've only heard from two people who thought it made things worse. The only negative side-effect of it is that it causes a "pop" or "boink" sound to be given out when you punch in a new frequency with the keypad. Aside from that it makes the radio much more enjoyable.

and another comment:

if people who know of *specific* incidents of this type of problem
(car safety failures in the presence of radio transmissions) please
SEND ME *ACCOUNTS* of same along with specific descriptions of the
vehicles involved, the failure, and the radio transmission, as well as
contact information for the sender (or person involved), and I will
collect these and forward them to the Department of Transportation...

maybe the D of T's standards for modern electronically controlled vehicles
haven't caught up to modern technology.

Thanks!

kb8cne/9, Brad Banko
b-banko@uiuc.edu

ps: on a related topic: i heard a rumor at a conference that NASA had
certified only the RCA 1802 microprocessor (remember the COSMAC ELF?) for
(manned, mission-critcal control?) space mission use up until a few years ago,
because it was simple, low density IC technology which is less susceptible
failure from cosmic ray damage. (makes sense.)

415. CT 6.26 Shareware

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 08:28:34 UTC
From: reisert@mast.enet.dec.com
Message-ID: <1992Mar26.133044.13066@PA.dec.com>
Source record: 291663

I was incorrect about the statements I made earlier this week. Apparently a special shareware version of CT 6.26 (contest logging software by K1EA) has been available for downloading from the W6GO BBS - 916-992-0923 - since February, 1991. However, this BBS has access restrictions - you are allowed 15 minutes of 'browse' time, and you must pay $25 to become a subscriber. If you have a 9600 baud modem, it only takes 4 minutes to download the software, which can be accomplished in the 'browse' time. Those of you with slower modems are out of luck.

I have asked K1EA if it is OK to post CT 6.26 shareware to the net (i.e., upload it to FTP sites, etc.). I have not heard back from him yet. I will, however, mail a UUENCODED copy of the .ZIP file to anyone who sends mail to me at the address in my .sig.

Further updates as events warrant.

419. Clarification of docs on DJ-580T

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 12:03:02 UTC
From: clemon@lemsys.UUCP
Message-ID: <clemon.07pe@lemsys.UUCP>
Source record: 291643

Taken from the DJ-580T revised manual :

1.2 OPTIONAL ACCESSORIES

To enhance your DJ-580 radio further, optional accessories
are available. At ALINCO, we strongly recommend that you
purchase appropriate accessories to get full features and
performance from your radio.
....
13. Tone Squelch Unit.....EJ-12U

11 DIGITAL SQUELCH (DSQ)
....
This feature is achieved by use of DTMF Tones that will either open
(or keep closed) the DJ-580T/E. In this section you will learn how
to transmit and receive the DSQ SCHEME! A radio must be DSQ
compatible to take advantage of these features.

I'd like like to confirm that the 580 has built-in DSQ as well as
ask for people's experiences with it. I presume that the 580 transmits a
burst of DTMF at keyup, is this burst very fast or does it take 2 seconds?
Do you HAVE to go into the settings and set the person you're calling every
time or will DSQ decode work from numbers punched into the keypad (ie.
non-DSQ radio paging a DSQ radio)?

ALSO taken from the manual :

10.5 MANUAL DIAL

In some instances you may want to dial a number manually.
perform the following steps.

1. The telephone symbol should not appear on your display.
If it does, press and hold the FUNC key, then press the
A key, the C key and finally the A key again.

2. Press and hold the PTT key.

3. Now dial the number on your keypad as you would a
telephone.

Is it necessary to do this is you just want to punch in numbers on
the pad while transmitting? The manual sounds as if DTMF tones aren't
generated by the keypad normally during keyup at all.

>I am looking for answers to the following questions:
>
>1. ARE RECREATIONAL BOATERS REQUIRED TO OBTAIN AN FCC LICENSE TO LEGALLY
> OPERATE VHF MARINE RADIOS FROM THEIR BOAT ?

YES! any boat which has a VHF (or any other including radar) radio must be licenced. It is the same as a station licence. The user is not licenced the boat is.

>
>2. ARE RECREATIONAL BOATERS REQUIRED TO OBTAIN AN FCC LICENSE TO LEGALLY
> OPERATE VHF MARINE RADIOS FROM LAND LOCATIONS TO THEIR BOAT ?
> IF SO, IS ANOTHER LICENSE REQUIRED FOR THE LAND BASED RADIO OR HAND HELD
> RADIO ?

No. not for VHF, but there are circumstances that require the operator to hold a restricted radiotelephone permit. The specifics slip my mind.

>
>I have herd people state that it is imperative to have a valid VHF marine
>radio license in possession if/when the Coast Guard/Marine Police conduct an
>inspection of your boat. "HEAVY FINES WILL BE ISSUED IF YOU HAVE A VHF
>RADIO AND DO NOT POSSESS A VALID VHF MARINE RADIO AT THE TIME OF THE
>INSPECTION"
>
>I have also herd people state that recreational boaters are NOT required to
>obtain an FCC license to legally operate their VHF marine radio. (From boat,
>from land to boat or from Hand held to boat)

It is my understanding that boat to land communication is prohibited. e.g., wife to hubby, house or truck to boat. Since the boat is the operating station the licence does not extend beyond use on the boat.

>
>I understand that there is a FCC license application form for VHF marine
>radios. Who must apply for one? I was told that the FCC license form
>states something similar to "ALTHOUGH VHF MARINE RADIO LICENSES ARE NOT
>REQUIRED FOR RECREATIONAL BOATERS....."

Everyone operating radio equipment from any size or type boat must have a station licence. Yes, the coast guard has begun a strict policy of enforcement in this area. The old forms may say this, but the latest that I have seen do not

>
>Does anyone know the correct answers to these questions or know the FCC

>office I can call to get the correct answers. Thanks in advance.

There was a discussion of these topics in rec.boats about a month ago where all the addresses and phone numbers were posted. I dont have my application paperwork here @ the office, but I know the application was obtained from the ship radio division of the FCC in Pittsburg PA.

If you get the licences you are asked to indicate all radios you will be operating from the boat (marine type) mark everything you may ever use, even if you dont currently have/use it. because each time you have the licence amended to add a new piece of gear it will cost you the $35.00 filing fee all over again.

Hope this helps....Good Luck

Hello out there. I am a relatively new ham (Feb. 91) I am looking
into 2 meter packet. I presently do not own a computer of any type.
My question is this: In another news group I saw a dumb terminal for
sale it was a VT220 it said it could be used for packet. I can understand
how a computer with the proper software and TNC can be used... but a dumb
terminal????? Please enlighten the not so intelligent.

Thanks and 73

>>sounds like a DX pileup to me....and I have broken through those in the
>>past with LOTS of major factors working against me.... also, I figure a

>Except this is FM, not SSB. Capture effect says biggest signal wins.
>If you're not the biggest, you may not be heard at all.

you missed the whole point! I am, after all, aware of what capture effect is.......the point I was making was that frankly I don't care what the odds are, I am going to try. if I'm on a bus with an HT during a pass, I'm going to try...even though it's virtually a sure thing that I won't make it (or even hear the shuttle's downlink).

just because the odds are against you doesn't mean you should just curl up in a corner and hide. that's called quitting without even trying, and it isn't for me. if I try and get lucky, I'm a very happy camper. if I try and fail, I can still say I tried. if I don't even bother to try, based solely on the attitude that it's going to be tough, and that I don't have a 100% chance of success, I'd feel pretty badly about myself.

when the 10m contest came around, I had lots of things working against me....indoor antenna that's half loading coil, re-enforced concrete walls (e.g., RF black hole), 100 Watts if antenna would tune ok (which it didn't), never having worked a contest before, a view only to the west (meaning very tough to work much to the east, north, or south), and so on....did I curl up and hide in the corner? no! I tried a contest for the first time....had fun, too. did I get a high score? no, but I did work the Marshall Islands and lots of other DX, and the QSL cards are still pouring in.

see my point now? :-) I'm going to try, period, even if the odds aren't all in my favor. if I don't try, the odds are even worse, right? :-)

> The Mod is so easy all you need is a Phillips screwdriver and
>5min's. It's that easy. Ok here it is:
.
.
.

Unfortunately the above mod also removes muting during power-on, which allows a potentially harmful 'thump' to be heard. In addition when entering a new freq. directly from the keyboard into the PLL freq. synth, a loud 'squeal' will sometimes be heard as the PLL locks onto the new freq.
I modified the above mod to include a small SPST switch which I located on the side of the radio next to the ext. ant and tape out sockets. This switch connects the above mentioned ribbon cable second lead into its matching socket. This minor change allows you to either enable or disable muting at will. You get all the advantages of being able to scan without 'chuffing', without risking the speaker or audio amp due to the loud thumps...

I find it very encouraging to see low cost qrp equipment coming on the market. The MFJ is one of two or three now available. But what annoys me is the need to carry around a tuner/swr meter for portable operation. I wish the manufacturers would consider building a tiny unit into their equipment. I also wish they would configure a flat cabinet, one that could be placed in a attache case for easier transport. Oh well, I guess we should just be grateful that an American company came up with an HF transceiver for under 1000 dollars!!

AMATEUR RADIO EXAMINATION OPPORTUNITIES

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Email may be sent to the ARRL/VEC at:

bjahnke%arrlhq.UUCP@uhasun.hartford.edu

or

MCI MAIL ID: 215-5052

You should include your postal address (the slow kind) in case
we need to send you non-electronic material in answer to
your question.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you will be attending
the test session.

In article <55801.pjml@[139.166.140.1]> pjml@unixa.nerc-swindon.ac.UK (pjml, Pete Lucas, NCS-TLC, Swindon.) writes:
]Maybe mixer-leakage of DC receivers accounts for more of the 'swishers'?
]In any case, it just goes to show how far a QRP signal could go; in my case
]the SWL lives about 1/2 mile away....

When I was a kid in Albuquerque (ca 1961), both myself and my next door neighbor were novices. One day I heard a swisher, and I followed it around. Eventually I figured out that it had to be his LO. It turned out that when I heard HIS swisher, he could hear mine, so I chased his swisher around the band. It drove him nuts! He finally called me on the phone and asked if I was doing it, and if so, how did I know what frequency he was listening to.

I was great fun :-) :-)

429. Reminders from the STS-45 SAREX team

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 14:58:58 UTC
From: jmaynard@oac.hsc.uth.tmc.edu
Message-ID: <6273@lib.tmc.edu>
Source record: 291653

Forwarded from Gerry Creager, N5JXS, SAREX project engineer and co-investigator:

1. We have already had a problem with folks trying to talk to Atlantis on simplex on the downlink frequency. The Orbiter IS NOT LISTENING there! Also, If the Orbiter is calling a particular station persistently, they are probably trying to talk to one of the school contacts. Please cooperate with them, and let them talk to the schools.

2. The European frequencies are

DOWNLINK: 145.55 MHz

UPLINK: 144.80
144.75
144.70

The uplink frequencies for the rest of the world are 144.95, 144.97, and 144.91. As Gerry said, the orbiter IS NOT LISTENING ON 145.55!! If you transmit there, you are talking only to the ground stations also trying to work the shuttle, and will likely earn the bad feelings of hams for miles around. If you're trying to work simplex, you're QRMing the orbiter. It's that simple.

430. receiver specs "noise limited"

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 15:00:56 UTC
From: bruce@merlin.think.com
Message-ID: <BRUCE.92Mar26150056@merlin.think.com>
Source record: 291590

I've been doing some receiver spec comparison based on lab tests. I understand what minimum discernable signal, blocking dynamic range, and 3rd-order IMD DR and intercept mean. However, in some of the ARRL reviews, I see BDR and/or IMD DR listed as "noise limited", and I've never seen a good explanation of this, including in the ARRL Product Guide, or whatever it's called. Usually, it's just stated without explanation.

I remember one statement in one review (maybe IC-725?) that said something like "internal noise in the receiver prevented us from measuring it" or someting like that. Perhaps one of the ARRLHQ people could explain this to me. I guess there's another measurement limitation cropping up, which is some receivers don't "break down" until sigs would be so strong as to risk damage to the reciever (e.g., the TS-850 tests).

I sure am. The antenna I have, is the huster 75 meter resonator, with the
folding mast, and the bumber hitch. Only problem, is I cannot get the bumper
hitch to get real tight. It always seems to want to get loose.

Source record: 291659

mailer didn't like the bang path so post we must..

>Because of a particular rogue ham, there is extreme public pressure to
>limit ham antenna construction, while staying within the constraints
>of the FCC rules.

"Rogue ham"? Oh, boy. Rogue, probably. Ham, maybe.

Is he known to be an amateur radio operator or is it someone with a radio transmitter ? Makes a difference as to what levers you can pull to get the operator's attention. Pirates/bootleggers have a different idea about rules. Also people call anyone invovled with radio as a hobby a "ham".

Second problem is that the transmitting station (legal or illegal) can be perfectly clean and you can still have mucho interference - consumer receivers don't generally like to be in strong RF environments even when the radio frequency is not near the desired receiver frequency..

>Such regulation is obviously a tradeoff, attempting to balance the
>legitimate needs of both ham radio operators and other residents.
>Does anyone have some sample verbiage of such regulations that I can use
>as a model to draft ours?

The American Radio Relay League has a bunch. However, keep in mind that if the transmitter is the true source of your interference problems, reducing antenna height can make the problem worse by placing the mutually incompatible devices closer together. If you gotta have an rule, I'd recommend something like the Cocoa Beach, Florida, rules. Drop an SASE to Indian River Amateur Radio Club, 597 Capri Road, Cocoa Beach, Florida 32931-3011. Drop mail to the American Radio Relay League at 225 Main Street, Newington, CT 06111 or at 2155052@mcimail.com. the ARRL has things that show relationships about antenna height and communications effectiveness, electromagnetic compatibility, as well as books on these subjects.

>Secondly, the rogue is wiping out TV, portable telephone, and AM broadcasts
>in his neighborhood. What is a reliable way to get the FCC to investigate?

The FCC recently announced that they are not going to investigate TVI/RFI/EMI complaints any longer. they will send you a copy of the government book on electromagnetic compatibility and such but they do not want to spend their money on chasing these problems any more. I believe their viewpoint is that the interference problem is a mutual problem (the receiver is just as liable as the transmitter). the receiver must take steps to reject undesired signals as well as the transmitter must take steps not to produce any undesired signals.

my guess is it's a station operating illegally on or just above the 27 MHz CB frequencies w/o regard to purity of emissions.

>Well 1000 stations with 45W each is 45kW of Noise. More realistically >there will be maybe 100 stations at a time, each with say 1kW of ERP >directed at the satellite.
>
>All these signals are incoherent, so does this mean the power adds as the >square root or is it some other formula ?
>
>Assuming it is square roots, probably wrongly so corrections please-

The signals are incoherent with each other, but are coherent within themselves, FM carrier and sidebands, so a Gaussian distribution can't be completely assumed. The relationship is statistical and follows:

H= SUM P(t,j,k) * log(P(t,j,k) where SUM is over the interval t,j,k=0 to max transmitters. [1]

From this we can generalize that noise on the channel is proportional to the log of the sum of the transmitter powers. Thus a group of transmitters summing to 45 kW is only about 1.65 times worse than the same group summing to 1 kW on the channel.

>to be 10 dB above this (to be heard) you will need 100kW of ERP. >Now as you say 20kW is enough either there are not 100 stations, or >they are using less ERP (maybe not tracking accurately), or I got the >formula wrong.

Given the above relations, 27 kW ERP should be sufficient to be 10 db above the average channel noise. That should give strong capture and

lead to a capture improvement of an additional 15-20 db for a final S/N of better than 25-30 db. IE full quieting.

>Can we say, "The family that hams together stays together?"

Well, there are some questions that come to my twisted mind:
-- What kind of equipment does this family use--and how much??
-- With so many hams in the family, how do they allocate "shack time" per person?
-- If one of the kids does something wrong, are they grounded from the shack?
(Okay, bad joke. Let's take it a different way...)
-- If one of the kids does something wrong, are they restricted to operate CW only at 14.313 or something like that?
-- Is there a WAZ award, Worked All Zellings (didn't save previous messages so I'm not sure of the last name spelling)?
-- If one of them gets into a DX pile-up, is it okay for them to not use their call sign and instead shout... oh, never mind...

To: info-hams@ucsd.edu

Our ham radio club, MADRAS (Maryland Apple Dumpling Radio Amateur
Society, Inc.) is sponsoring a special event station: "Source of
the Potomac" that will transmit from Garrett County, Maryland and
from Mineral and Preston Counties, West Virginia.

Date: April 4-5, 1992
The club intends to operate all HF bands
The club will use the call: WK3X

I hope we can help out county hunters everywhere. The club intends
to set up on April 3, be on the air all of April 4 and most of the
day of April 5. This is in the Eastern time zone of the USA. The site
is on Back Bone Mountain. For more information contact me by email
or the club president, Larry, N3GKZ at (301)984-6112.

I wonder if the author of the book ever realized that the cubical quad
was invented at HCJB to deal with corona problems at their station
location in the Andes?

Aren't there some crackpot books out there claiming that there is a
secret UFO BASE in the Andes?

I think if Bruce Cathie had done a little more research, he could have
come up with a much better conspiracy theory!

I didn't mention it in the earlier post, but further in the book he noticed
that some of these locations where the lines crossed were not in residential
areas. He went to these locations, and sure enough....right there on top
of the building was one of these eerie looking HF cublical Quads or (gasp!)
something that sounds to me like a Yagi! (He described the "other" {Yagi}
antenna as being 'like a TV antenna with elements on a boom, only bigger).

He then babbled on with an elaborate theory about how these must have been
"beamed down" by alien spacecraft!

I would like to know how to get one of those ships to visit MY neighborhood!

I guess I should make one of those maps, and then move to an unused location where the lines cross!

I like the way all of this parallels Erik Van Daniken's CHARIOTS OF THE GODS, where the author explains away many wonderful archaelogical artifacts by claiming that they could only have been done with the help of advanced alien civilazations!

That gets posted here once in awhile, and I highly recommend it. I've only heard from two people who thought it made things worse. The only negative side-effect of it is that it causes a "pop" or "boink" sound to be given out when you punch in a new frequency with the keypad. Aside from that it makes the radio much more enjoyable.

To: info-hams@ucsd.edu

Sounds neat! I'd be glad to try when I move to a place where I can put up an OSCAR beam. (Possibly in a few months) How would Mir work as a passive reflector? Probably doesn't have all those RF absorbing tiles on it. And it tends to remain in orbit longer than the shuttle. Won't Freedom make a great reflector?! This is justification for its existence to me.

Subject: Two-Line Orbital Element Set: Space Shuttle
To: info-hams@ucsd.edu

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly), shuttle elements, and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

>
>Bill

Exactly. I should have made it clear that I was describing the typical
bureaucratic response that I think will happen when the problem of
illegals on HF begins to annoy the military and commercial interests.
And you are right. Banning amateur radio will just drive ex-hams to
sell their now useless gear to anybody with the bucks. The only
people who will be driven from the bands will be those who were not
the problem to begin with.

There was a time that I thought that when the cycle goes down and
the ten meter band goes dead that the problem drifting up from CB
would at least be less noticeable. Last night, however, I had drifted
down to 30M in the early evening and ended up moving around the band
to get away from several SSB signals. Later in the evening I dropped
down to 40M CW and ended up moving away from several more phone
conversations. Anybody who was on the air this weekend on the CW
bands must have heard lots of activity for themselves. Sunday
morning one chap lost it on 28.005. He was screaming at what sounded
like some woman talking about how to cook chicken with her buddy
who was advocating using lots of curry to cover the smell from a
bad bird. They were speaking spanish and this guy was shouting
obsenities in very bad spanglish, completely out of control. At
one time he was telling her to bite his pillows and place her
head on the road. Anybody who speaks some spanish can figure out
what he was trying to say. If it hadn't been so funny, it would
have been tragic.

I don't remember any activity at this level on the bands during
the last cycle ten years ago. It seems to have exploded within
the last cycle dip and is now growing rapidly. And there is no
way to stop it.

So I think the end of legal Amateur Radio is near. When the illegals
start getting into emergency, military, commercial freqs. the
ax will fall. Unfortunately, before that happens, the legal
ham community may find itself corrupted beyond repair by the
shouting matches and radio wars that have already started.

One way out for now is still available. Get a nice narrow CW
filter, put a good flexible audio filter on top of it, get
a good iambic key and keyer combination and work between
the screamers. You will find lots of friendly folks there
to talk to.

AA6PN

So I think the end is near.t

> Is anyone going to try this?

Sounds like you don't even need a ham license to try this. I bet lots of commercial TV transmitters have more than 2kW ERP in the direction of the shuttle. A reasonably-sized beam on one of the upper VHF TV channels should allow you to hear the TV carriers, if you use a narrow-bandwidth receiver. With a REALLY big antenna, you might actually be able to see some video DX courtesy of NASA!

> Assume 25% reflected in direction: 4.5 e-10 (-96 dB)
> To receiver (add path loss: 5e11) 9 e-22 (-210 dB)

This gives the loss to a 1 M^2 receive antenna which is
about 7.8 dBi at 144 MHz.

> So, the total path loss is roughly 210 dB which you have to overcome.
> This is for isotropic antennae.
^*transmit* (ERP = tx power)
>
> Assume: Transmitter power 100 Watts +50 dBm
> Transmit Gain Antenna 16 dB
This antenna is 16 dBi
ERP is now +66 dBm

> Receive Gain Antenna 16 dB
this antenna is 16 dB up from an
antenna of 1 square meter aperture
or about 24 dBi at 144 MHz.

> Path Loss -210 dB
> ---
> Signal at receiver: -128 dBm
> Ideal Passband noise of 3KHz signal -139 dBM

-139 dBm is KTB with system temperature of 290K,
ideal would be a lot lower than that if you could keep
the receive antenna from seeing hot terra firma around itself.
In reality T(ant) is probably 100-200 K for a 24 dBi antenna
and you might get a noise floor of 3 dB better than T=290K
or -142 dBm in 3 KHz.

> ---
> SSB Signal to Noise Ratio +11 dB (ie, marginal)

I've experimented and found that QSO is possible considerably below
this level. (I admit it helps if you know ahead of time that the
exchange is going to be callsign de callsign, "you're 59 in San
Francisco section, 73")

> FM Signal to Noise Ratio + 3.2 dB (ie, no good)

You must have meant S/N in 18 KHz bw?

Since the above numbers had a 16 dBi Tx antenna and a 24 dBi receive antenna it looks to me like an attempt of this sort ought to be made with a fairly good station, maybe a couple or four stacked longer yagis which can be pointed and tracked sufficiently accurately along with the 100 watts on CW. This is approaching a low end EME station on 2M.

However, if you can point the thing accurately a TVRO antenna on a microwave band might make an SSB contact possible. Even at only 1296 MHz an 8 foot dish has about 28 dB of gain. 100 watts of Tx power would give +78 dBm ERP while you only lose about 13 dB relative to the 16 dBsm (dB rel. to square meter) 2M antenna above. Up 12 for tranmit and down 13 for receive just about washes and I should think CW QSO should be possible in spite of minor antenna aiming problems. Things would probably be better than that since the noise floor should get pushed down more on 1296 due to lower sidelobes on the TVRO dish. You might get another 3 dB of C/N due to the lower system noise. 13 dB C/N should give adequate SSB *if* you both ends could stay pointed.

All this presupposes that the shuttle really has an RCS (radar cross section) on the order of 25% x 900 M^2 = 200+ square meters at vhf-uhf frequencies. Anybody know what it really does?

I was told that in the mid-60's that WB6KAP (northen CA) and a southern CA station tried to use ECHO (I think) as a reflector on 2M. They claimed to have heard a signal at the right time and place but I don't know that it was ever confirmed.

>Secondly, the rogue is wiping out TV, portable telephone, and AM >broadcasts in his neighborhood. What is a reliable way to get the FCC to >investigate?

The simplest way to get the FCC to investigate is for someone to file a complaint with them.

There are also local interference committees in many areas of the country sponsored by the ARRL. If you are not a ham and do not have access to QST from which you can contact the Section Manager to determine the interference committee contact, let me know and I will assist you.

If your local law is drafted with an aim to constrain ham operation because of interference alone, you are on very soft ground. Even more strongly than PRB-1 adjudicates that tower regulation is the FCC's domain, interference regulation and control is ABSOLUTELY the FCC's domain. No local government, meaning States down to local municipalities, may attempt to regulate interference.

I suggest you obtain a copy of the most recent publication on this topic, "The FCC Interference Handbook", and pass it around. You will find that the tone is such that the consumers of TV, portable telephones, etc. can be as, if not more, responsible than the ham radio operator if the ham is operating within good engineering practice.

Sorry I cannot help you with wording.

454. Re: Skin effect calculation

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 20:32:44 UTC
From: royle@tekig6.PEN.TEK.COM
Message-ID: <4882@tekig7.PEN.TEK.COM>
Source record: 291580

>From: depolo@eniac.seas.upenn.edu (Jeff DePolo)

>Does anyone have a reference or a mathematical expression for determining
>how "thick" the current-carrying skin is on an RF conductor at a given
>frequency? I know I saw it somewhere once before, but I can't seem to
>find it now.

Skin depth (delta), in meters = sqrt(rho/(pi*f*mu)) where

rho = resistivity of wire (about 1.76E-8 ohm-m for copper)
pi = pi
f = frequency in hertz
mu = permeability = relative permeability * 4*pi*1E-7 (mksa units)

Although Jeff probably knows the following information, it might be of
interest to others on the net.

The current magnitude decreases exponentially from the surface. The skin
depth is the depth at which the value has decayed to 1/e (36.8%) of its
value at the surface. If the material is at least several skin depths
thick, the rf resistance can be calculated easily. In that case, the
resistivity is the same as though a current equal to the value at the
surface and of constant density were flowing in the region from the
surface to a depth of one skin depth. That is, we can pretend that the
current doesn't decay but stays of constant value down to one skin depth
and abruptly ends, and get the same answer. So for a wire with a diameter
of at least several skin depths (say, 10 for good accuracy), the cross-
sectional area in which our substitute uniform current is flowing is

A = pi * (2 * r * delta - delta^2)

where r is the wire radius in the same units as delta. The delta^2 term
usually can be neglected since r >> delta.

The AC resistance is then rho * l / A

where l is the length of the wire. Since the DC resistance of the
wire is rho * l / (pi * r^2), the ratio of AC to DC resistance is

(pi * r^2)/(pi * (2 * r * delta - delta^2)),

or approximately

r / (2 * delta).

Remember that the wire must be several skin depths thick for this to be
accurate. As one data point, the skin depth in copper at 10 MHz is 21.1E-6
meters or 0.00083 inches. #12 wire

All the above stuff shows that:

The skin depth is inversely proportional to the square root of frequency, resistivity, and permeability. The AC resistance is proportional to the square root of these three variables.

This means that if you substitute a material for copper which has twice the resistivity (half the conductivity), the RF resistance will only increase by the square root of two (about 1.4X). It also explains a comment I've heard several times from people using galvanized steel electric fence wire for an antenna -- that it works ok for a while then doesn't seem to do so well. (But it gets more broadband!) When new, the zinc coating is usually a few skin depths thick so that's where the current is. Zinc isn't too bad, but when it wears or weathers off the current ends up in the steel. Steel is pretty resistive stuff to begin with, but the high permeability decreases the skin depth to make it extraordinarily lousy at RF.

457. Re: receiver specs "noise limited"

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 21:41:45 UTC
From: rovero@oc.nps.navy.mil
Message-ID: <4514@taurus.cs.nps.navy.mil>
Source record: 291583

The noise limited usually refers to the phase noise from the
frequency synthesizer. It does degrade/limit IMD and intercept
point measurements.

458. I'm sure these are FAQs, but I don't see one (new Ham stuff)

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 21:54:38 UTC
From: bonobo@Ingres.COM
Message-ID: <1992Mar26.215438.1023@pony.Ingres.COM>
Source record: 291584

I'm looking to possibly get into Ham radio, but I need a few real bonehead questions answered first. My background is basically that I've grown tired of the limitations of CB, and I'd like to see what it takes to get involved with Ham:

1) How much time does it take to get the technician's (no code, right?) license?

2) I'm used to the 40 channels you get with CB. What kind of spectrum do Hams deal with? Is it all FM?

3) If I bought that Radio Shack 2-meter handheld deal, what am I basically getting as far as range and features? I noticed the catalog said it had some kind of "direct-dialing" feature...what does that mean?

4) What kind of range are we talking about for 5 watts (that's what the RS handheld has)? They have another with 25 watts...what kind of range does that have? I'm talking about normal, everyday range, not skipping off the space shuttle! We live in an area with many hills and valleys, and I wonder what we could expect under these circumstances.

Sorry for the barrage of stupidity, but I'll sleep better knowing the answers to these questions!

Thanks!

-David Victor

459. Ham classes/equipment in the Bay Area?

Newsgroup: rec.radio.amateur.misc

461. Help ! Fast charger for ICOM HT battery pack

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 22:28:33 UTC
From: jrey@pnet01.cts.COM
Message-ID: <m0lTyzc-0000J1C@crash.cts.com>
Source record: 291587

HELP ! Has anyone built a fast-charger for an ICOM HT battery pack ?

I've got an ICOM IC-24AT HT. The owner's manual says it takes about 15 hours to charge the battery pack (BP-82) using the supplied wall charger. In order to charge the battery pack, it must be attached to the HT (It is charged through a regulator circuit in the HT). The battery pack is rated at 7.2 VDC @ 300 mAH and the wall charger is rated at 12 VDC @ 200 mA.

Extra battery packs won't help because I still need the regulator circuit in the HT to charge the drained battery. It seems to me that I should be able to charge the battery directly, allowing me to increase the charging current and hopefully reduce the charging time. (I know ICOM offers a fast-charger, but I can't afford the asking price)

Does anybody have any hints, suggestions, or comments ? Please e-mail me directly. I'll summarize and post if there is enough interest. Thanks !

An informative report. A couple of questions. You mention the QRXDX forum an electronic forum, where can I find it?

After reading the DX Bulletin's report on the Mt. Athos I think it should be deleted and any other specialized country not accessable or put on the air on a regular basis/

Again a nice report. Sure good to see this in a electronic medium.

468. Stereo CW in QST circa 1982

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-26 23:59:07 UTC
From: brucec@tekgen.bv.tek.com
Message-ID: <501@tekgen.bv.tek.com>
Source record: 291595

A long time ago, there was a construction article in
QST for a "stero" CW board. It took the headphone output
of an HF transceiver and split it into stereo signals.
The respective left or right position of a signal in
stereo space was linearly related to the frequency
difference of the CW above or below the BFO.

I'm looking for this article or a reference to it.
I think it was published in the early 1980's -
maybe 1982. I don't have a QST index. Does
anyone in netland have the reference or (ideally)
a copy of this article?

I could send a SASE for the copy if you have it!

TNX

Bruce Cheney NI7M

PS. I was disappointed that I could not find a library in the
Portland OR area that carries QST. I looked in the 5 biggest
libraries I could think of, all to no avail.

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly), shuttle elements, and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

Chart Start Date: Day #028

NOTES:
This graph is determined by plotting the greater of either the planetary
A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

Chart Start: Day #027
NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of
activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts. For more information, request the document "Understanding Solar Terrestrial Reports" from: "Oler@Rho.Uleth.Ca" or "COler@Solar.Stanford.Edu". This document, as well as others and related data and forecasts exist on the STD BBS at: (403) 756-3008.

474. Re: Help ! Fast charger for ICOM HT battery pack

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 02:35:04 UTC
From: ardai@bass.bu.edu
Message-ID: <82627@bu.edu>
Source record: 291601

In article <m0lTyzc-0000J1C@crash.cts.com> jrey@pnet01.cts.COM (Jim Reynante) writes:
[He doesn't wan't to tie up his 24AT for 15 hours charging the battery]
-Extra battery packs won't help because I still need the regulator
-circuit in the HT to charge the drained battery.

Icom makes the AD14 charging adapter, which sells for around $15. This
widget slides on top of the battery and the wall brick that came with the
radio plugs into it. It still takes 15 hours, but it doesn't tie up the
radio. I plug the wall brick into a timer, set to turn off in 15 hours so
as not to overcharge the pack.

I recommend having an extra (charged) pack on hand, since the battery always
dies in the most inopportune moment :-) Just remember to slip the spare
battery in a small plastic bag before tossing it in your pocket. Otherwise,
your keys may get rather hot...

476. Shuttle Contact!!!

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 04:21:47 UTC
From: fireman@wam.umd.edu
Message-ID: <1992Mar27.042147.12401@wam.umd.edu>
Source record: 291603

I forget who asked the question about contacting the shuttle, but the answer is yes.
The University of Maryland Amateur Radio Club (club call W3EAX) contacted the Space Shuttle Atlantis today (3/26/92). Member Maurice Devitas (NE3S) contacted the Space Shuttle at aproximately 8:30 am (EST). The QSO was short, however, the Space Shuttle indicated that they were over the Great Lakes and there was a heavy cloud cover. They also indicated that they had heard us the day before (when the shuttle was pointed away from earth for solar experiments).
Maurice asked if they were able to contact the space station MIR and they replied that they had tried 20 minutes earlier with no success. The shuttle became scratchy sounding so they exchanged 73's.
The whole QSO was tape recorded and the local campus TV station did a news spot using the audio from the tape. The campus newspaper is also doing a story on the event.
Now that the club call has been acknowledged, we are going to try for individual contacts using the club equipment. Maybe a pass-the-mike-around type of contact.
Equipment used:
386 Computer with tracking hardware
12 element 2 meter beam w/azimuth & elevation rotors
Yeasu All mode 2 meter radio
Icom All mode 2 meter radio on a vertical (for listening)
440 Mhz ATV receiver for NASA rebroadcast
Oh yeah, almost forgot
1000 watt VHF amplifer (Henry I beleive)

(The amp,the Yeasu, and the ATV are on a loan from one of our members)

Now all we need is a Kansas City Tracker (anyone want to donate one to us?). We are currently adjusting the elev/azimuth by hand.

We also copied a 10 minute long contact with the school in New Hampshire. And we made 3 voice contacts with MIR today.

N3JVP (member of W3EAX)

Hi Folks,

I have a chance of getting one of these rigs for use as the RF side of a packet node. It's a 70cms mobile, 35 or 5W out with the usual features.

I was wondering if anyone has used such a box on packet (1200bps) and whether there is any information on its suitability for conversion to 9600bps.

Your experiences, suggestions and any other info would be appreciated.

TIA & 73, Mike (G6DHU)

Yeah, but then, 'Tandy' is an awfully queer name too, isn't it? And why would a leather company get in the radio business? Realistic, You've never heard of it? Tsk Tsk Tsk :)

I suppose I'm being Americanocentric, but I'd have thought this was worldwide more or less... Mea Culpa... :) Realistic = Radium Shacks house label.

Oh, and let's not quote peoples grotesque .sigs any more than we have too :)

481. Mods wanted for Radio Shace PRO-2021

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 13:37:49 UTC
From: dans@rehab2.UUCP
Message-ID: <486@rehab2.UUCP>
Source record: 291608
Cross-posted to: misc.wanted,rec.radio.shortwave,rec.radio.amateur.misc

Wanted: Mods for the Radio Shack 2021 scanner!

I have the 800Mhz mod (not done yet) but am looking for any other
mods. Ones that I am most interested in are 'SPEED' mods (this thing is a
good scanner but dead slow) and 'SQUELCH' mods (the play in this thing is
unreal). Anyone have a service manual for this beauty you no longer need?

This message is cross-posted, so please e-mail anything you might have. I
would be happy to post a summary if anyone desires.

482. RE: VHF Marine Radio Licenses: Who Needs Them?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 13:50:00 UTC
From: mgknn@cbnewsk.cb.att.com
Message-ID: <1992Mar27.135000.19422@cbnewsk.cb.att.com>
Source record: 291609

Thank you to everyone who replied, there were several. Everyone seemed to agree recreational boaters are required obtain a VHF Marine radio license to legally operate their marine radio, however, other details varried.

I called the FCC and asked them what is necessary to legally operate a VHF marine radio from your boat, your shore house to your boat and from your hand held to your boat. (Note: Land to land communications on VHF Marine frequencies is NOT permitted) Here is the reply I received:

1. To legally operate a VHF marine radio on board your recreational vessel, you must apply for, and receive, a VHF Marine Radio Ship License using form 506. Check Block A and answer items 1 through 13. The Fee is $35.00. Operating a Hand Held radio from a licensed vessel is covered under the ship's VHF marine radio license.

2. To legally operate a VHF marine radio from a land based location to vessels, you must apply for and receive a Maritime Mobile Marine Utility Code License using form 503. The Fee is $70.00

3. To legally operate a hand held VHF marine radio from a portable land location to vessels, you must apply for and receive a Maritime Mobile Marine Utility Code License (In addition to the one you have for your fixed land base station) using form 503. The Fee is $70.00

So if you have a radio on your boat, one in your shore house and an hand held you carry around when on shore, you will need *THREE* VHF marine radio licenses, (Thats $175.00 Ouch!). Any questions, call the FCC at (717) 337-1431 ask for the Marine/Avation Branch.

483. Anyone done DF by multi-site TDOA?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 14:05:25 UTC
From: john@anasaz.uucp
Message-ID: <1992Mar27.140525.5152@anasaz>
Source record: 291610
Cross-posted to: rec.radio.amateur.misc,sci.electronics

One of the problems in jammer/stuck-mike tracking in a large repeater coverage area is determine the part of the area from the signal is coming. This is very useful prior to starting mobile DF (it's nice to know where to drive to to start hearing the signal, and how far one has to drive).

Frequently there are fantasies of putting direction finders at a number of sites, and networking them somehow (hi Steve :-). However, here is another thought I present for analysis:

At several sites, put up receivers. Attach A/D systems to the IF. Transmit the resulting signal to a common site. At that site, run high speed correlators to derive the time difference of arrival between the signals (this assumes some modulation on the signals).

A system like this, if it could correlate down to about 1usec (which is WAY below the shortest period in the signal in th IF :-(), would locate the signal within a quarter mile.

Why would one go to all this trouble? If one is to use a few high sites, they are likely to be RF nightmares, which makes it difficult to use electronically scanned DF equipment. This should provide a simpler system (although probably too complex).

What do you DSP and RF weenies out there think?

There is no single expression for this. It is highly dependent upo
the shape of the conductor and whether the material is magnetic
or not.

You had best look this up in a reference book.

Source record: 291612

Dear David Victor,

1) How much time does it take to get the technician's (no code, right?)
license?
IT DEPENDS UPON YOUR STUDY AND RETENTION ABILITIES. STUDY GUIDES ARE AVAILABLE WHICH CONTAIN THE POOL OF TEST QUESTIONS. IT IS POSSIBLE TO STUDY IT ONE DAY AND TAKE THE TEST THAT SAME OR THE FOLLOWING DAY. THEN YOU MUST WAIT FOR YOUR LICENSE - ASSUMING YOU PASSSED (SOME SAY UP TO EIGHT WEEKS). TRY TO DO SO BEFORE JUNE AS MANY TESTING PROGRAMS TAKE A VACATION FOR THE SUMMER MONTHS.

2) I'm used to the 40 channels you get with CB. What kind of spectrum
do Hams deal with? Is it all FM?
CODELESS TECHNICIAN LICENSEES ARE RESTRICTED TO AMATEUR FREQUENCIES ABOVE 30 MHZ BY INTERNATIONAL TREATY. WITHIN THE BANDS YOU ARE LICENSED TO OPERATE, YOU MAY USE MODES OTHER THAN FM (OBVIOUSLY NOT CW, BUT SSB, PACKET, ETC.). HOWEVER, YOU WILL PROBABLY USE FM MOSTLY AS THAT IS THE MOST PREVALENT MODULATION METHOD FOR OFF THE SHELF EQUIPMENT IN THE VHF/UHF BANDS. HAM EQUIPMENT IS NOT "CHANNELIZED" A LA CB. IF IT WERE, YOU WOULD BE TALKING ABOUT THOUSANDS OF CHANNELS AVAILABLE IN THE AMATEUR VHF/UHF RADIO FREQUENCY SPECTRUM.

3) If I bought that Radio Shack 2-meter handheld deal, what am I basically
getting as far as range and features? I noticed the catalog said it had
some kind of "direct-dialing" feature...what does that mean?
VHF/UHF WORK IS NOMINALLY LINE OF SIGHT. ON FLAT LAND THE HORIZON IS ROUGHLY 8 MILES AWAY FOR A PERSON 6 FEET TALL. TREES, LAND TOPOGRAPHY, POWER LINES AND BUILDINGS CAN DRAMATICALLY ALTER THIS LINE OF SIGHT RANGE BOTH POSITIVELY AND NEGATIVELY - THROUGH SIGNAL ABSORPTION AND SIGNAL REFLECTION.

THE POWER OF A 2 METER (OR OTHER VHF/UHF AMATEUR BAND) HT COMES FROM ITS USE WITH A REPEATER, NOT SO MUCH FROM ITS RAW HT TO HT POWER. REPEATERS ARE FIXED STATIONS ERECTED VOLUNTARILY BY LOCAL AMATEURS. THESE FIXED STATIONS RECEIVE (THE SIGNAL FROM YOUR HT) ON ONE FREQUENCY AND RE-TRANSMIT IT, AMPLIFIED, ON ANOTHER FREQUENCY. THE TWO FREQUENCIES, OR FREQUENCY PAIRS, ARE PRE-DETERMINED AND PUBLISHED IN "BAND PLANS". FOR 2 METERS, THEY ARE PLUS OR MINUS 600 KILOHERTZ APART. FOR THE 440 MHZ FM PORTION OF THE BAND, I BELIEVE THEY ARE 5 MHZ APART, ETC.

REPEATERS ARE USUALLY LOCATED AT HIGH POINTS RELATIVE TO THE AREA GEOGRAPHY - ON TOP OF MOUNTAINS, BUILDINGS, ETC. - TO EXTEND THEIR "LINE OF SIGHT" RANGE FOR BOTH RECEIVING AND TRANSMITTING PURPOSES. UTILIZING A REPEATER, A 25-30 MILE RANGE IS NOT UNCOMMON. THE EXTENTS OF YOUR COMMUNICATION THUS COULD BE 30 MILES FROM YOU TO THE REPEATER AND 30 MILES FROM THE REPEATER TO THE PERSON YOU ARE COMMUNICATING WITH FOR A TOTAL OF 60 MILES. SOME REPEATERS ARE NETWORKED TO OTHER REPEATERS TO MULTIPLY THE RANGE AND/OR FREQUENCIES COVERED. THERE ARE REPEATER NETS IN THE WEST THAT CAN LITERALLY LINK YOU FROM EL PASO TO THE LOS ANGELES AREA. THESE EXTENSIVE NETS ARE NOT COMMON BUT DO ILLUSTRATE THE

POSSIBILITIES.

RIGHTS OF ACCESS TO REPEATERS VARIES. SOME ARE OPEN, PUBLIC AND FREE FOR ANYONE TO USE. OTHERS HAVE CONTROLLED ACCESS. SOME ARE CLOSED AND PRIVATE. SOME REPEATER GROUPS ASK FOR MEMBERSHIP AND NOMINAL FINANCIAL CONTRIBUTION TO HELP SUPPORT THE MACHINE. OTHERS ALLOW FREE USE OF THE REPEATER BUT HAVE A LIMITED ACCESS LIST FOR THE PHONE PATCH (REF: THE "DIALING" FEATURE), ETC. THE ARRL PUBLISHES A REPEATER GUIDE THAT LISTS THE MACHINES, FEATURES (A LA PHONE PATCH, EMERGENCY POWER, ETC) AND THEIR STATUS (OPEN, CLOSED, ETC). YOU MIGHT ALSO CHECK WITH THE RS OR A LOCAL HAM STORE FOR INFORMATION THEY MIGHT HAVE ON AREA REPEATERS.

NOTE THAT THE TYPICAL OPERATING METHODS AND ILLEGAL OPERATIONS PREDOMINANT IN THE CB BANDS ARE NEITHER WELCOME NOR TOLERATED IN THE HAM BANDS. THE FCC RULES ARE ENFORCED SOONER OR LATER. STIFF FINES AND JAIL SENTENCES HAVE SILENCED QUITE A FEW BAD APPLES OVER THE PAST FEW YEARS. WE WOULD CERTAINLY WELCOME YOU AND OTHER NEWCOMERS TO HAM RADIO AS LONG AS YOU COMPLY WITH THE RULES AND EXHIBIT COURTEOUS OPERATING PRACTICES.

4) What kind of range are we talking about for 5 watts (that's what the RS handheld has)? They have another with 25 watts...what kind of range does that have? I'm talking about normal, everyday range, not skipping off the space shuttle! We live in an area with many hills and valleys, and I wonder what we could expect under these circumstances.
THE RANGE PORTIONS OF THIS QUESTION IS ANSWERED ABOVE.
I DOUBT SERIOUSLY THAT RS HAS A 25 WATT HT - THE ASSOCIATED BATTERY WOULD BE QUITE LARGE. I AM NOT AWARE OF BUT ONE RS MODEL AMATEUR BAND HT AVAILABLE. 25 WATT UNITS FOR AMATEUR WORK ARE NORMALLY CAR-MOUNTED MOBILE UNITS.

486. Motorola Development Kit

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 15:49:37 UTC

Message-ID: <1992Mar27.154937.9423@EE.Surrey.Ac.UK>
Source record: 291613

A few days ago messages were sent regarding the Motorola M68HC16Z1EVE development kit at the price of $168. According to Motorola, the special offer does not apply in the UK. Can anyone suggest a method of getting this kit in the UK via the USA. Motorola will not ship abroad directly, but a distributor might. Then again there was a deadline mentioned, so it is probably too late.

UK price is $400 plus tax (at 40% discount to university), quite a difference ! Looks like we miss out again. Anyone got one they want to sell ?

491. Re: Clarification of docs on DJ-580T

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 16:35:59 UTC
From: dale@sequent.com
Message-ID: <1992Mar27.163559.3119@sequent.com>
Source record: 291618

Re: questions about the DJ-580T

1.2 OPTIONAL ACCESSORIES

For the DJ-580T the tone squelch unit (EJ-12U) is built in.
I was also concerned about this when I purchased my 580 and verified
this in advance. My guess is that for the DJ-580E this is an option,
but that is just a guess.

11 DIGITAL SQUELCH (DSQ)

You can open squelch on the DSQ on the DJ-580T by simply sending tones
from another radio. (ie. just enter code on the keypad of other radio.)
This will break squelch on the DJ-580T, the user of that radio would then
hear you and would want to disable the DSQ feature to carry on a
conversation. If they did not disable the DSQ, you would have to keep
sending the tones prior to each transmission.

I have been expermenting with DSQ and have found that it works fine
in simplex mode but will not operate through the repeaters I have
tried it on. The repeaters do pass the tones through. I believe
the problem is that the DJ-580T sends the tones too quickly, and the
quality through the repeater is degraded enough that this will not
open squelch. I can demonstrate that the problem is not key-up delay
by entering the DSQ code as a stored phone number and then dialing
that number after a few seconds of key-up. I can demonstrate that
the repeater does pass codes by entering the number manually on the
keypad and opening squelch on the listening radio.

I have seen a posting stating that ALINCO has a fix to slow down
the tone sending. I haven't contacted them yet about this but will
be doing this.

You can dial phone numbers by simply entering the numbers on the keypad.

All in all, I think this is a great radio.

492. Current Going Rate On RS Pro-34 Scanner

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 16:45:39 UTC
From: JPB7946%TNTECH.BITNET@cunyvm.cuny.edu
Message-ID: <01GI4WY14D74DCRDL5@TNTECH.BITNET>
Source record: 291619

I know that several newer models are out, but what would the going rate be for a Realistic (Radio Shack) Pro-34 Scanner? I've got the scanner (still in great condition, since it just sits on my desk), two rechargers, nicad AA batteries, and all of the manuals that go with it.

I still haven't decided if I want to get rid of it ... it's just the town I live in is so small (how small is it!), I can listen to everything I want to on my 2m handheld. All of the extras on this scanner just get wasted listening to 4 freqs in the 155 MHz range.

Since I don't thing that the general readership wants to see all the replys to this request, please e-mail me direct.

Thanks for the help.

493. Can no-code Tech use CW on VHF?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 16:51:22 UTC
From: rossi@gvlf8-m.gvl.unisys.com
Message-ID: <1992Mar27.165122.15287@gvl.unisys.com>
Source record: 291620

I read something on the net recently that implied that a no-code Tech can not operate CW on the VHF bands. Now I realize that if a no-code Tech knew enough CW to make a contact then he probably should be able to pass the code test and then it would not be an issue, but...

I see no reason why a no-code Tech who is studying his CW, but is not quite ready to take the test, could not get on VHF CW with someone at 2-3 WPM for practice.

Are there rules specifically prohibiting something like this?

I was lucky enough to catch the first part of "Late Night" when Letterman metioned that he was going to interview Veronica. It turned out to be his last segment, but it was well worth the wait ("Late Night" starts at 2330 CST, so you can get an extra hour of sleep).

KC6TQR was *very* charming and Letterman for the most part minded his manners (she innocently made a very funny remark when ask what was different between her home (Long Beach, CA) and New York - her reply was "well, here the paper is called the New York Times and there it's called the Long Beach Times"!). It was great...

They broke for a commercial, and when they returned, Letterman asked Veronica to try and make some contacts on the rigs he had on his desk (it looked like a Kenwood 9xx with an external speaker, and an ICOM 2m mobile). Antenna leads trailed off camera, and no mention was made of the type or location. Anyway, Veronica identified the HF rig as a "10m radio", and the mobile as a "2m radio". She turned on the 2m mobile (with a quiet prompt from off camera to turn up the volume), and said "This is KC6TQR monitoring, is there anyone available for a demonstration?" N2??? returned (I'll have to check my tape for the exact call) and they began a QSO (Letterman initally asked if he could "get on" but she shook her pretty little head (she didn't explain the reason). However, after she introduced herself, she turned the mike over to Letterman (who really surprised N2??? when he came on the air!).

They broke for a final commerical (you could here repeater traffic in the background), and Letterman asked if the equpment belonged to her; when she shook her head "no", he replied "well, it's yours now". Wow! I think that is the nicest gesture I have *ever* seen by Letterman (who can be less

than a pleasant fellow). It will be a story Veronica will be able to tell
the rest of her life (I wonder if she'll remember w/o the aid of the tape?).

I'm certain that this will make QST and the other magazines...

BTW, I plan to use the video (I guess I need to ask permission) in talks
to kids about amateur radio.

Message-ID: <1992Mar27.172822.11878@cbnewsm.cb.att.com>
Source record: 291622

Are there any HF propagation prediction programs out there capable of dealing with propagation from the high arctic (e.g. Northern tip of Greenland) with any degree of reliability? Propagation to the USA and western Europe on 10m during the summer would be of most interest, but other bands and paths would also be useful. I would prefer public domain programs (i.e. free!), but info on commercial software would be welcome. Please reply via e-mail if possible as I don't always get to read this newsgroup often enough to prevent older messages being deleted before I get to them.

>sale it was a VT220 it said it could be used for packet. I can understand
>how a computer with the proper software and TNC can be used... but a dumb
>terminal????? Please enlighten the not so intelligent.

A dumb terminal is actually an excellent device for packet. Why tie up
an entire computer system when a $15 + (hamfest price) terminal will
work quite nicely. I have used a variety of such terminals on packet,
with great success. The only thing a terminal (or even a computer)
needs is basic communications software which can be configured to
the usual N-8-1, and the baud rate to communicate between it and the
TNC. The actual operating software is contained within the TNC. PC
packet software provides operating enhancements, but they are not necessary
to enjoy packet on the dumb terminals, which do indeed contain the basic
communications cability. When purchasing a used dumb terminal, here are
a few things to watch for:

* The manual. This will be very helpful for configuring the terminal.

* Check for dip switches on the front or rear panel, for setting baud
rate and other communications parameters. Configure these settings
in accordance with directions in the TNC manual. Some terminals have
keyboard commands/configuration setup programs in lieu of dip switches.

* Before purchasing, check for screen stablility, and correct operation
of all keys.

500. Need advice on new HF RIG...TS140S/ICOM IC-725/???

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 20:57:19 UTC
From: mebly@eng.umd.edu
Message-ID: <1992Mar27.205719.20502@eng.umd.edu>
Source record: 291627

I've decided to try to get a station back on the air, but I've been out of it for a long time.

What experience do y'all have with the Kenwood 140s/ICOM IC-725?

Anything else in that general price range to look at? Anything to avoid?

Thanks very much. Reply via e-mail...I'll summarize if there's interest.

Thanks, 73's.

>started which will help protect hams!
>

You've got to be kidding! Let us not forget that the media will twist a story in any way they can to make it more sensational. They are just as liable to twist things around and blame hams for auto safety problems! After all, the approved cellular phones only emit a couple of watts, but ham radios can emit 10-100 times that. You don't think the media would pick up on this and blame the hams for running gear which is not approved by the automakers?

Let's just put our own pressure on the automakers and *solve* the problem, rather than placing it in the public's scrutiny. The general public is ignorant in this matter, why should they be bothered with it? We all know how well the ignorant can solve problems, i.e., about as well as I could fix a broken HT with only a hammer ;-)

>adjudicates that tower regulation is the FCC's domain, interference regulation
>and control is ABSOLUTELY the FCC's domain. No local government, meaning
>States down to local municipalities, may attempt to regulate interference.

A problem is that even though the fear of interference might be the motivation behind the local laws, they usually do not directly address it. Instead they try to make other things illegal, often without the knowledge that it can make the problem even worse.

If someone down the street with a big tower was known to cause interference, it tends to set in people's minds that if the tower were gone, so too would the interference. Little to they know that if the same operation is done at ground level, the interference can actually be worse in the local area, and the operator might even be using higher power to compensate for no tower.

503. Young Ham on "Late Night with David Letterman"

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 22:19:17 UTC
From: wa8ycd@11.70
Message-ID: <199203272216.AA26303@tilde.csc.ti.com>
Source record: 291530

For those of you who go to bed early,

Last night (26 Mar 92) the last guest on NBC's "Late Night with David Letterman" was a 6-year old girl from Long Beach CA who was touted as one of the youngest ham operators. (They waffled on that issue, whether in the youngest in the country or whatever.)

She was a cute little first-grader who came out and demonstrated making a contact on a 2-meter repeater. They had an HF transceiver set up as well, but did not use it.

She signed her call, and was answered by a local who proceeded to engage her in a contact that *-almost-* seemed unrehearsed. The lady she contacted even chatted with Dave a little.

It was a reasonably positive plug for ham radio, although very little information was provided. Hopefully, local clubs can capitalize on the (limited) publicity and provide answers to questions that were not answered in the brief show segment.

They mentioned in passing that she had to take a test, and she mentioned passing the code test. Letterman asked her about her parents, and she said that her mom had a Technician license, and her dad was licensed.

Wow! National TV. What'l they think of next?

73,
Bob WA8YCD

504. Re: 2 Mtr Packet Question

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 22:38:20 UTC
From: paulz@hpspdla.spd.HP.COM
Message-ID: <32920080@hpspdla.spd.HP.COM>
Source record: 291531

A dumb terminal is enough computer to get you started in packet. Many hams operate packet using a computer running a program which simulates a terminal. The sophisticated programs just make it easy by substituting softkeys or mouse actions for certain control codes you would have to type.

One feature which could be of interest is the ability to connect a printer to the terminal so you can get a hardcopy of stuff.

505. Re: Stereo CW in QST circa 1982

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-27 22:43:17 UTC
From: paulz@hpspdla.spd.HP.COM
Message-ID: <32920081@hpspdla.spd.HP.COM>
Source record: 291532

There was a local ham (I recall his name was Don Hildreth) who did several designs of stereo CW. I repeated his experiments with my own circuits. I wasn't impressed by the scheme of high tones in one ear and low tones in the other.

Later I figured out how to make a very very narrow (50 HZ) audio filter. I had trouble tuning in stations. So I pulled the stereo circuits out of the junque box. It was very nice to have everything in one ear and just the desired signal in the other.

The Radio Shack 2m HT (HTX-202) has excellent audio and
good intermod rejection. It also includes CTCSS (encode
and decode), DTMF, 16 memory channels, DTMF squelch,
and programmable duplex frequency splits.

Output power is nominal 4 Watts with alkaline pack, up to
6 Watts (rated) with external power or an ICOM extended
12 or 13.5-volt pack. I've measured 8 watts running off
of automotive power (with the car running).

A quick question for the net. What percentage of the repeaters do we net readers know about?? If this percentage is relayively high, then why not mail, using some rtandard form, a list of our favorite repeaters to some kind soul. This person, after collecting the data for a few months, could then re-mail, or post the data base.

What do you think??

e-mail, and I'll summarize
- jim

No such rules that I can see.

However you can earn some enemies really fast by trying out 2-3 WPM on the
CW subbands. I suggest making arrangements with some for the practice first
via voice or packet, and the pick an unoccupied frequency away from the CW
subband.

To all radio amateurs

SB SPCL ARL ARLX012
ARLX012 W1RU Honored

Richard Baldwin, W1RU, has been named 1992 Amateur of the Year by
the Dayton Hamvention Awards Committee. Baldwin has been president
of the International Amateur Radio Union since retiring from the
ARRL Headquarters Staff in 1982. His ARRL Headquarters career
spanned the years 1948-52 and 1956-82. He was General Manager of
the League from 1975 to 1982, and following his retirement served as
ARRL vice president for International Affairs from 1982 to 1986.

Over the years he has attended 15 World Administrative Radio
Conferences on behalf of radio amateurs. In the Fall of 1991
Baldwin was elected to the Quarter Century Wireless Association's
Hall of Fame, one of only eight amateurs to be so honored.

The Hamvention also will honor Gerald Cromer, K4NHN, with their
Technical Excellence Award. Cromer developed what the committee
called a novel antenna design for amateur television use.

Receiving the Hamvention Special Achievement Award is Ned Raub,
W1RAN, who assisted a Cambodian refugee family, including Seth Keo,
XU1SS, in reuniting. Raub was the subject of a feature article on
his humanitarian efforts in the March 1992 issue of Reader's Digest.

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space and rec.radio.amateur.misc on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (updated weekly) and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a eleven-character name.

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description

01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293

520. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-28 01:46:54 UTC
From: tkelso@galaxy.afit.af.mil
Message-ID: <1992Mar28.014654.24376@afit.af.mil>
Source record: 291547

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly) and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.misc. This week's elements are provided below.

|> the text and it worked great. Only one question. I now need a program
|> which will decode the uuencoded data.

Here's uudecode.c:

/* uudecode.c */

#include <stdio.h>
#ifndef MSDOS
#include <pwd.h>
#endif
#include <sys/types.h>
#include <sys/stat.h>

#define DEC(c) (((c) - ' ') & 077)

main(argc, argv)
char **argv;
{
FILE *in, *out;
struct stat sbuf;
int mode;
char dest[128];
char buf[80];

if (argc > 1) {
if ((in = fopen(argv[1], "r")) == NULL) {
perror(argv[1]);
exit(1);
}
argv++; argc--;
} else
in = stdin;

if (argc != 1) {
printf("Usage: uudecode [infile]\n");
exit(2);
}

for (;;) {
if (fgets(buf, sizeof buf, in) == NULL) {
fprintf(stderr, "No begin line\n");
exit(3);
}
```

```
if (strncmp(buf, "begin ", 6) == 0)
break;
}
sscanf(buf, "begin %o %s", &mode, dest);

#ifndef MSDOS
if (dest[0] == '~') {
char *sl;
struct passwd *getpwnam();
char *index();
struct passwd *user;
char dnbuf[100];

sl = index(dest, '/');
if (sl == NULL) {
fprintf(stderr, "Illegal ~user\n");
exit(3);
}
*sl++ = 0;
user = getpwnam(dest+1);
if (user == NULL) {
fprintf(stderr, "No such user as %s\n", dest);
exit(4);
}
strcpy(dnbuf, user->pw_dir);
strcat(dnbuf, "/");
strcat(dnbuf, sl);
strcpy(dest, dnbuf);
}
#endif

#ifdef MSDOS
out = fopen(dest, "wb");
#else
out = fopen(dest, "w");
#endif
if (out == NULL) {
perror(dest);
exit(4);
}
chmod(dest, mode);

decode(in, out);

if (fgets(buf, sizeof buf, in) == NULL || strcmp(buf, "end\n")) {

I may be wrong but shouldn't you be able to operate any mode within
your operating class? I was not given a voice test but have worked
voice :) I would thing that as long as the band section permitted
cw, you should be able to use it. I think that this provides an
excellent way for the no-code tech people to improve their cw abili-
ties. later.

Propagation Forecast Bulletin 13 ARLP013
>From Tad Cook, KT7H, Seattle, Wa
March 28, 1992
Relaye by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB PROP ARL ARLP013
ARLP013 Propagation de KT7H

The week began quietly with K indices at zero. This means that the
earth's geomagnetic field is stable, and high latitude paths are
quite good. It was a mostly uneventful week, with solar activity
low, and the flux ranging from about 160 to 180. A number of active
regions from the previous solar rotation failed to materialize.

The 23rd and 24th were the most unsettled, with degradation of polar
radio paths, and the K index peaking at five.

Spring is a good season for HF propagation. Look for good
conditions for the WPX Contest this weekend, with the solar flux
around 185 to 195, continuing up to about 200 on April 1. Based
upon the last solar rotation, we mat see some active geomagnetic
conditions centered around April 7, 13 and 20.

American sunspot numbers for March 20 through 26 were 121, 124, 110,
166, 142, 144 and 205, with a mean of 144.6. 10.7 cm solar flux for
the same period was 168.5, 167.6, 160.7, 166.3, 175.7, 186 and
178.6, with a mean of 171.9.

ARLS018 Random QSO Passes

STS-45 was launched on March 24 at 1313z. The following are
random-QSO passes in Mission Elapsed Time format (MET). The first
two digits under begin and end are day (24-hour period) since
launch, the second two digits are hours since launch (on given
mission day) and the last two digits represents the minutes.

For example, one hour after lanuch would be 00/01:00. 24 hours
after launch would be 01/00:00. One day, one hour and one minute
after launch would be 01/01:01.

Remember the actual MET of launch is 00/00:00, no matter what the
UTC time was at liftoff.

Body handling: HTML body converted to readable text

I contact my local RS Manager yesterday after reading about the recall of the RS 2m HT. I was informed that what the guy had heard was that 6 months BEFORE the release of the 2m HT that there had been a recall but none of the recalled units had been shipped to the RS stores and was taken out of the warehouses before shipment of the units.

I was re-asured that the RS 2m HT that is out on the market today is a quallity and dependable HT. This manager even bought one for himself just 2 days before I walked in to purchase one. I have to waite now until I get more money to order one .

>are doing or they wouldn't be there in the first place. It seems
>rather humorous to have to grant a "waiver" to someone who had
>literally trained for years for this particular mission just to
>operate the ham radio.

I've never understood why they get waivers either. IMHO, they aren't
necessary. The rule (97.207a) only says that the station must be licensed
to an extra, the control operators may be of any class (well, tech or above
for a 2m station). So license the station to W5RRR (it may be already),
and the astronauts are the control operators. The ARRL even explains this
in their rule book. What am I missing here?

I think I can understand why the FCC would want the extra class requirement
in there though. They want an extra class licensee in charge of a station
that has great potential for causing interference and they want it to have a
reliable telecommand system so it can be shut down if it is causing
problems.

If it was up to me, I would change the rule to only require extra class for
space stations that operate under (1) automatic control only or (2) are
controlled by telecommand. That way space stations that can be controlled
locally would not even have to be licensed to extra's.

I guess you would also have to amend 97.207b to allow space stations to be
shut down by local control as well as by telecommand.

The notion that CW operations should be prearranged via packet
indicates the way things are going.

Perhaps in future Morse ("Continuous Wave" is inappropriate here)
signals will be compressed with a compression technique similar to
fax compression (run-length coding, Hamming-coded) and transmitted via
packet, for more efficient bandwidth utilization. This has the nice
property that the bandwidth consumed is directly proportional to
Morse WPM. It would also allow the transmission of Morse over the
Internet, which could be fun. Transmission in this form would preserve
the original key timing, so you could recognize fists as usual.

Maybe the ARRL could make the repeater directory (or more appropriately,
the database of coordinations) available electronically, obviously
excluding the link frequencies maintained by the coordinators. It's
all "public information" anyway. What say ARRL?

Msgid: $RACESBUL.215

TO: ALL EMERGENCY MANAGEMENT AGENCIES/OFFICES VIA THE ARS
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6HIR @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.215 DATE: March 30, 1992
SUBJECT: MGT - What is a "responder"?

QUESTION: What is a responder?

REPLY: When we use the term "responder" in the Bulletins
and other emergency services and public safety references, we
mean those paid and volunteer people whose primary duty it is to
report for duty when required or requested to do so. It may be a
frequent, if not daily, activity. Most RACES personnel are
considered to be or are responders. Where one responds is not
important. In other words, a responder may go to the office,
Emergency Operations Center, duty station, or to some other
assignment in the field. Some RACES and ARES people may not be
considered responders because they may serve in a consultant,
maintenance, advisory, home station, or in other non-response
roles. A responder is trained, equipped, and physically prepared
for the response role to be performed.
State responders are approved by this agency when and where
to respond. This is generally true of any volunteer attached to
any government agency. ---KH6GBX

>sale it was a VT220 it said it could be used for packet. I can understand
>how a computer with the proper software and TNC can be used... but a dumb
>terminal????? Please enlighten the not so intelligent.

The standard firmware in most TNCs treats it's serial port as if it were connected to a dumb terminal. So a dumb terminal works, or a PC with a communications program that emulates a dumb terminal. Most TNCs also support a different mode of operation called host mode that is designed to interact with a special packet communications program on the PC. This allows the PC much more intimate control of the TNC. In addition to that, most TNCs now support KISS mode. KISS stands for Keep It Simple Stupid. The TNC becomes in essence just a packet Smartmodem(tm) for the computer and the packet protocol is handled internally by software on the PC. This is the way the KA9Q TCP/IP package deals with TNCs. Several other software packages now require the TNC to operate in KISS mode as well. In KISS mode, the TNC does channel management, when to transmit and when to listen, and sends the raw data frames to the PC for further processing.

The current trend is away from TNCs altogether. There are Plugin boards for the PC that bypass the serial bottleneck that exists between the TNC and the computer by using internal DMA. This is a must for high speed packet. Beware however, there are board products on the market that are merely TNCs on a card and appear to the computer as a serial port with attached TNC. These offer no benefit in performance, though they are tidy, eliminating the separate box and cabling.

The majority of packet software is written for the IBM PC and it's clones. Most hams running packet have PCs. There is some software for the Mac and Amiga as well. Older computers like the C64 and CPM machines aren't being supported much anymore, though there are older programs for both.

I'd suspect many yanks don't know the meaning of WANK.

Actually it's W, N, K, and AA-AL. Argentina has the rest of the A's.
That's why the temporary upgrade identifiers are AE, AA, AG, and KT.
They didn't want to use one that would indicate another country. AT
is right out because it's not a US prefix.

> Hmmm, that's one
> week to them, 6 weeks for them to type in my name and address, and one
> week back to me.

Actually, it can be as bad as ten days from the VE's to the VEC. A couple of days in the mail, a week or so at the VEC, a couple of days in the mail. It's possible that it can take almost three weeks to get as far as the FCC.

The ARRL VEC has had a real push to decrease the response time. Where they used to have you send the exams to them by regular mail, they now make available overnight express numbers for all the major delivery companies available to their VE's to get the stuff back overnight. I always try to get my exams out promptly (and in an organized manner to speed processing at the ARRL). After our last Hamfest session (Saturday), I processed all the papers and FEDEX'd them up to the League on Monday morning. In less than a week I got my postcard saying that all was in order with the session paperwork.

> and then it would not be an issue, but...

A technician is authorized for all amateur priveleges above 50 MHz.
He can operate CW or any other legal mode. You can either operate
real A1A, though most people aren't set up for it, or you can just
send morse on tones through your FM rig (like a repeater ID).

CQ WW WPX contest. It's an odd contest where the multipliers are the
different prefixes. This is a boon to people like me with odd
prefiexes (there are no more than 26 WO2's in the world).
Unfortunately I've got other things to do this weekend. The CW
version of the contest reappears in May.

548. learning code

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 03:07:21 UTC
From: barry@geovision.gvc.com
Message-ID: <1992Mar29.030721.10800@geovision.gvc.com>
Source record: 291575

Folks:

I figure I might as well start learning code now so that I can go right for my second level lic. after finishing a ham course at one of the local night schools. I bought a book today written by L. Peter Carron Jr., he lists a few different ways of learning the code. How did some of you go about grouping the different letters and symbols? I do have a key to practice code as I go along.

551. A poll re cw & licensing.

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 05:49:53 UTC
From: lee@tosspot.sv.com
Message-ID: <uDVDiB1w165w@tosspot.sv.com>
Source record: 291428

Here're some questions -

1. What is your license class.

2. Do you approve of no-code amateur licenses.

3. How long have you been licensed.

4. Would you support regular retesting of all classes in both theory and code in order to retain a license.

...now, answer them honestly.....and email your replies to me. When I have a large enough sample (say 50 replies), I will post the results right here.

Lee

552. Re: Young Ham on "Late Night with David Letterman"

I think that NBC provided the radios (looked like a ts950 and a tm721).
At the end of the segment, Dave ased veronica if the radios were
hers. She said no, and he told her that they were now, and that
she was going to take them with her. What a deal!

jeff (jeff@markets.amix.com)

553. Amateurs on USENET List April 1992 Part 1 of 2

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 06:28:28 UTC
From: mark@ve6mgs.uucp
Message-ID: <1992Mar29.062828.27@ve6mgs.uucp>

554. Amateurs on USENET List April 1992 Part 2 of 2

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 07:00:57 UTC
From: mark@ve6mgs.uucp
Message-ID: <1992Mar29.070057.446@ve6mgs.uucp>
Source record: 291431

I operate a gateway for USENET articles to the local Packet Bulletin Boards.
A side effect is that I am building a list of the amateurs on the Network. Here
is the list I've maintained. I would be pleased to take any e-mail updates to
this list. I have split this list into two parts. This is part 2.

Enjoy, 73 de VE6MGS/Mark -sk-

# Last update March 28 1992
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personnal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. Some GENIE Hams are included
# (Generated by Brian Murrey/KB9BVN) in this list, their addresses are
# listed as ??@<GEnie> which of course is unaddressable. Mike Shirley
# WB6WUI mikey@slic.cts.com is willing to relay manually to GENIE.
# Name Name of the individual.
# Call Call letters of the individual.
# Date Last update YY-MM[-DD] International format.
#
# A trailing * denotes not searched in call book for verification yet, @
# means not found in my call book (1987). ? after means recheck may be required
# (eg. Call does not match name).

555. Hamnets, Etc.

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 07:44:00 UTC
From: Gary.Stimpson@f106.n348.z1.FIDONET.ORG
Message-ID: <214.29D6FFFF@mailbox.bison.mb.ca>
Source record: 291432

Hello,

I'm interested in hearing some HAM Nets on my Shortwave Receiver, a Sangean 803A with 75 feet of `longwire'. Can someone give me some freqs to tune into? I'm really interested in Amateur Radio, so I figure the best thing to do is listen and learn.

Thanks,
Gary

PS: I don't have my SW radio yet, but it should be here soon (hope). :)

UNDERSTANDING THE DAILY SOLAR GEOPHYSICAL DATA BROADCAST
--------------------------------------------------------

Revision 1.01

The Solar Terrestrial Dispatch (STD) has been providing a daily
broadcast of solar geophysical indices and other data over the electronic
networks.

Computer software (in MSDOS format) to automatically extract the data in
these daily reports, archive it, and/or graphically analyze it, is available
through anonymous FTP or from our computer BBS system. For those with FTP
capabilities, you may obtain this software under the filename "BCAST101.ZIP"
from one of the following sites:

* solar.stanford.edu, in the "pub/Software" directory.
* nic.funet.fi, in the "pub/dx/software/msdos/solar" directory.
wsmr-simtel20.army.mil, in the directory: "pd1:<msdos.database>"
wuarchive.wustl.edu, in the directory: "mirrors/msdos/database"

* - At the present time, Version 1.01 of BCAST is only available from these
sites.

The software may also be freely downloaded from our computer BBS system by
dialing: (403) 756-3008. You will find BCAST101.ZIP in the Utilities file
section of the BBS.

A sample broadcast message follows below. This sample broadcast data
set will be fully described in this document.

!!END-DATA!!

LINE 01

!!BEGIN!! (1.0) S.T.D. Solar Geophysical Data Broadcast for DAY 248, 09/05/91

!!BEGIN!! : Signifies the start of the report, for computer-controlled
extraction of the data.

(1.0) : Represents the version number of the data set. The
appropriate software with the same version number must
be used to extract and interpret the data sets.

DAY 248 : The day of the year for the report.

09/05/91 : Equivalent Month/Day/Year of the report.

LINE 02

10.7 FLUX=164.5 90-AVG=206 SSN=204 BKI=5454 3323 BAI=025

10.7 FLUX=164.5 : The 10.7 cm solar radio flux as reported by the
NRC-Dominion Radio Astrophysical Observatory (DRAO) in
Penticton, British Columbia, Canada (formerly produced
by the Algonquin Radio Observatory in Ottawa).

90-AVG=206 : This value represents the 90-day average 10.7 cm solar
radio flux.

SSN=204 : This value is the observed sunspot number as observed by
Mt. Wilson Solar Observatory and reported by NOAA.

BKI=5454 3323 : These digits represent the 8 three-hourly Boulder K-indices
as observed by the Boulder USGS magnetometer. The first
digit represents the observed K-index for the period from
00:00 UT to 02:59 UT. The second digit represents the
observed K-index from 03:00 to 05:59 UT, and so forth.
If data is unavailable, it is replaced with an asterisk.

BAI=025 : This value is the observed 24:00 UT Boulder A-Index for
Boulder, Colorado.

LINE 03

BGND-XRAY=B8.6 FLU1=2.7E+05 FLU10=8.3E+03 PKI=5454 4333 PAI=029

BGND-XRAY=B8.6 : This is the background x-ray flux value as reported by the
Space Environment Laboratories. This value is produced by
observing the background x-ray emissions in the soft-xray
band (1 to 8 Angstroms). Consult the "Glossary of Solar
Terrestrial Terms" as produced by the STD for information
on understanding the x-ray classification scheme. This
document is available for anonymous FTP from the site:
"solar.stanford.edu" in "/pub", or on "nic.funet.fi".

FLU1=2.7E+05 : This value is the observed proton fluence at greater than
1 MeV (million electron volts).

FLU10=8.3E+03 : This is the observed proton fluence at greater than 10 MeV.

PKI=5454 4333 : These digits represent the 8 three-hourly estimated
planetary K-index values for the UT day. The format is
the same as is used for the Boulder K-indices noted above.

PAI=029 : This value represents the estimated planetary A-index value
for the UT day. Occassionally, this value is not available
at the time the data set is compiled. If this is the case,
a preliminary calculation is made to estimate the planetary
A-index value using the planetary K-indices. Although this
will not produce an officially accurate result, the results
calculated in this way are usually accurate to +/- 2 points.

LINE 04

BOU-DEV=093,051,073,060,023,030,012,021 DEV-AVG=045 NT SWF=05:079

BOU-DEV=093,051,073,060,023,030,012,021
These values represent the observed maximum deviation in
the Boulder USGS magnetometer. The values are in nano-
tesla (nT, or reported as "NT" elsewhere in the report).
The first value represents the observed maximum deviation
of the geomagnetic field (using the most disturbed magnetic
component) during the period 00:00 UT to 02:59 UT. In this
example, the maximum deviation observed was 93 nT between
00:00 UT and 02:59 UT. The second value represents the
maximum deviation between 03:00 UT and 05:59 UT. Each of
these values correspond to the observed Boulder K-index
as reported on line 2 of this daily report.

DEV-AVG=045 NT : This value represents the average daily maximum deviation
of the Boulder magnetometer, given in units of nanotesla
(or NT). It is produced by simply averaging the 8
three-hourly maximum deviation values given on this line.

SWF=05:79 : The first value (05) represents the number of possible
episodes of Short Wave Fades (SWFs) observed during the
UT day. Short wave fading is simply a period of time when
the absorption of High Frequency (HF) radio waves increases
which produces a decrease in signal strengths of HF signals
OVER SUNLIT AREAS. In other words, this value represents
the approximate maximum number of times HF signals may have
faded out during the UT day. It is important to note that
SWFs are the strongest over the low and middle latitudes
and are ONLY observed during the daylight hours, preferably
when the sun is higher in the sky.

The second value (79) represents the estimated maximum
number of minutes that solar-flare activity may have

produced observed SWFs. In this example, solar activity
may have produced observed SWFs as many as five times
during the UT day. The estimated maximum number of
minutes that signals may have been degraded was 79.

Please note that these values are estimated maximums.
It is important to remember that most regions of the world
are in darkness for many hours each UT day. During periods
of darkness, SWFs will not be observed. Therefore, these
values are most useful as indicators of the possible
ionospheric disturbances which may have occurred during
the daytime hours. Days with 00 episodes of SWF activity
denote low levels of daytime sporadic HF signal absorption.

LINE 05

XRAY-MAX= M4.4 @ 0111UT XRAY-MIN= B8.0 @ 0914UT XRAY-AVG= C2.5

XRAY-MAX= M4.4 @ 0111UT
This value represents the maximum observed X-ray level
during the UT day, as well as the time of its occurrence.
In this example, x-rays during this UT day peaked at a
class M4.4 level at 01:11 UT.

XRAY-MIN= B8.0 @0914UT
This section of the report represents the minimum observed
x-ray level during the UT day. Same format as the maximum.

XRAY-AVG= C2.5 : This value represents the average x-ray flux observed
during the UT day. This value is determined by averaging
all of the 1-minute x-ray values during the UT day. This
average value might not always be determined by a full set
of one-minute daily values. If data from the GOES
spacecraft supplying this information is temporarily
halted, this value will be calculated from those daily
one-minute values which are received. It is therefore
possible, (although extremely unlikely) that this average
value may be produced from only one or two one-minute flux
measurements.

It is important to distinguish the difference between the
background x-ray flux and the average x-ray flux. The
average x-ray flux is the actual numerical average of all
daily x-ray bursts (including all x-ray flares). The
background x-ray flux is the lowest stable x-ray level
observed during the day which is not associated with x-ray
bursts. The x-ray average will therefore almost always be
higher than the background x-ray flux. In this example,
the average x-ray flux is a fair bit higher than the
background level, possibly due to a number of x-ray bursts
which occurred during the UT day.

LINE 06

NEUTN-MAX= +003% @ 2250UT NEUTN-MIN= -002% @ 1700UT NEUTN-AVG= +0.5%

NEUTN-MAX= +003% @ 2250UT
This is the maximum observed neutron monitor count as
observed by the Thule neutron monitor. It indicates a
maximum observed value of 3% which occurred at 22:50 UT.
Significant maximums of greater than 10% may be related to
Ground Level Events (GLEs) which are associated with near-
relativistic particle bombardments from major solar flares.
These neutron monitor values are determined by examining
the 5-minute averages of the neutron monitor count rates.

NEUTN-MIN= -002% @ 1700 UT
This is the observed minimum neutron monitor count as
measured by the Thule neutron monitor. Values below
-5% may be related to Forbush decreases (FDs) which are
most often associated with strong geomagnetic disturbances.

NEUTN-AVG= +0.5%: This value represents the average neutron monitor count as
observed by the Thule neutron monitor. Average values
below -5.0% are associated with Forbush decreases.

LINE 07

PCA-MAX= +0.7DB @ 1425UT PCA-MIN= -0.2DB @ 2325UT PCA-AVG= -0.1DB

PCA-MAX= +0.7DB @ 1425UT
This section shows the maximum Polar Cap Absorption (PCA)
level observed during the UT day by the Thule T30A
Riometer. Positive values indicate elevated levels of
ionospheric absorption over the polar regions. As a
result, positive values (particularly in excess of about
1.0 to 2.0 dB) are sufficient to cause notable attenuation
of HF signals over or near the polar regions. Values
larger than 3.0 to 4.0 dB may cause heavy to complete
absorption of HF radio signals over the polar and possibly
some high latitude signal paths. Riometer values less than
or equal to 0.0 dB are associated with negligable
absorption levels over the polar regions. Note that small
levels of absorption (of only a few tenths of a dB) may be
sufficient to cause errors in navigational signals such as
OMEGA navigational signals traversing the polar regions.

PCA-MIN= -0.2DB @ 2325UT
This is the minimum PCA level observed during the UT day.

PCA-AVG= -0.1DB : This is the average PCA level observed during the UT day
and is calculated by averaging the 5-minute averaged
riometer measurements during the UT day.

LINE 08

BOUTF-MAX=55331NT @ 2250UT BOUTF-MIN=55263NT @ 1649UT BOUTF-AVG=55301NT

BOUTF-MAX=55331NT @ 2250UT
This is the maximum observed value of the Total magnetic
Field (TF). The total field value is calculated by using
all three orthogonal components of the geomagnetic field.
These values are valid for Boulder, Colorado. The field
values are in units of nanotesla (NT). The time of the
maximum is also indicated.

BOUTF-MIN=55263NT @ 1649UT
This is the minimum observed value of the total field at
Boulder, Colorado.

BOUTF-AVG=55301NT
This is the daily average of the total magnetic field
strength as observed at Boulder for the UT day.

LINES 09 & 10

GOES7-MAX=E:+113NT@ 0607UT GOES7-MIN=N:-052NT@ 0911UT G7-AVG=+067,+063,+002
GOES6-MAX=P:+101NT@ 1925UT GOES6-MIN=N:-010NT@ 1439UT G6-AVG=+073,+026,+014

These two lines report the maximum, minimum and observed
average values of the geomagnetic field at geosynchronous
altitudes as observed by the GOES-6 and GOES-7 spacecraft.
GOES-7 is the primary spacecraft and is therefore reported
first.

The first capital letter following the "GOES7-MAX="
statement indicates which component of the magnetic field
experienced the maximum value observed during the UT day.
There are three possible letters which may be used here,
representing one of the three possible magnetic components:
P = The component parallel to the Earths rotation
axis. Positive values are northward. Negative
values are southward.
E = This is the Earthward component. Positive
values represent a downwardly directed field
(ex. toward the Earth or Earthward).
N = This component is perpendicular to the other
two. Positive values represent a westwardly
directed field. Negative values are eastward.
The figure following the "P:", "E:", or "N:" is the
observed magnitude of that component, followed by the time
that the value was observed. In this example, the GOES-7
spacecraft Earthward magnetic component was the observed
maximum component during the UT day. The magnitude of this
maximum Earthward component was +113 nanoteslas. This
represents a downwardly directed magnetic field with a

strength of 113 nT. GOES-7 observed this max at 06:07 UT.

This same format is followed for the minimum values
observed on GOES-7 as well as for the values on GOES-6.

G7-AVG=+067,+063,+002
This line reports the average geomagnetic field strengths
for the three magnetic components of the GOES-7 spacecraft.
The first value will ALWAYS represent the Parallel magnetic
component. The second value will ALWAYS represent the
Earthward magnetic component. And the last value will
ALWAYS represent the Perpendicular component. So in this
example, the average daily magnetic field strength for the
parallel component was +67 nT. The Earthward component had
an average field strength value of +63 nT while the
perpendicular component had an average value of +2 nT.

This same format is followed for the average values of the
GOES-6 secondary spacecraft.

LINE 11

FLUXFCST=STD:160,157,155 ; SESC:160,155,150 BAI/PAI-FCST=15,10,10 / 15,15,18

FLUXFCST=STD:160,157,155 ; SESC:160,155,150
The first three values represent the 72-hour forecast
10.7 cm solar radio flux values as produced by the Solar
Terrestrial Dispatch (STD). The second group of three
values are the 72-hour 10.7 cm solar radio flux forecast
values as issued by the Space Environment Services Center.
If either of these two forecasts are unavailable, "N/A"
will be used in place of the digits.

BAI/PAI-FCST=15,10,10 / 15,15,18
The first group of three values represent the 72-hour
forecast Boulder A-Index (BAI) values as issued by the
Space Environment Services Center. The second group of
three digits represent the 72-hour forecast Planetary
A-Index values (PAI) as issued by the United States Air
Force (USAF) Global Weather Central.

LINE 12

KFCST=3344 5433 2334 4211 27DAY-AP=019,011 27DAY-KP=2333 4333 2233 2322

KFCST=3344 5433 2334 4211
These digits represent the 48-hour K-index fourcasts as
released by the Space Environment Services Center. The
first value represents the forecast K-index value for 00:00
to 02:59 UT. The second value represents the forecast K-
index value from 03:00 UT to 05:59 UT, etc. The sixteen

digits define the expected K-indices for the next 48 hours.

27DAY-AP=019,011: These values are the historical estimated planetary A-index values that were observed 27 days ago (approximately one solar rotation). The first value represents the observed estimated planetary A-index value 27 days ago. The second value represents the value observed 26 days ago. These two values may help serve as a guide to the possible intensity of recurrent geomagnetic phenomena.

27DAY-KP=2333 4333 2233 2322
These digits are the estimated planetary K-index values that were observed 27 days ago. The first group of eight digits (2333 4333) represent the three-hourly planetary K-indices that were observed 27 days ago. The second group of eight digits (2233 2322) represent the K-index values that were observed 26 days ago.

LINE 13, 14...

WARNINGS=*MAJFLR;*PROTON
ALERTS=**MAJFLR:X1.1/2B,N20E29(6857),0523-0555-0641,II=2@0551,IV=3@0602;
MINFLR:M4.4@0111;MINFLR:M2.3@0528;**MINFLR:M1.6@1209;
**TENFLR:2200,DUR:N/A

These lines summarize the Warnings and Alerts which are active at the end of the UT day. Each warning category is prepended with a SINGLE asterisk. Each alert category is prepended with DOUBLE asterisks. The end of each warning and alert is appended with a semicolon if more warnings follow. If no warnings follow, a carriage return concludes the category. Warnings and alerts may span several lines. These WARNINGS are valid:

*MAJFLR = Potential Major Flare Warning
*PROTON = Potential Satellite Proton Event Warning
*PROTFLR = Potential Proton Flare Warning
*GSTRM = Potential Geomagnetic Storm Warning
*MSTRM = Potential Minor Geomagnetic Storm
*JSTRM = Potential Major-Severe Geomagnetic Storm
*AURMIDWCH= Middle Latitude Auroral Activity WATCH
*AURMIDWRN= Middle Latitude Auroral Activity WARNING
*AURLOWWCH= Low Latitude Auroral Activity WATCH
*AURLOWWRN= Low Latitude Auroral Activity WARNING
*PCA = Potential Polar Cap Absorption Event Warning

The following ALERTS are valid:

**MAJFLR = Major Solar Flare Alert
**MINFLR = Minor Solar Flare Alert
**MINSTRM = Minor Geomagnetic Storm Alert
**MAJSTRM = Major Geomagnetic Storm Alert
**SVRSTRM = Severe Geomagnetic Storm Alert
**PCA = Polar Cap Absorption Event Alert

**PCAENH = Polar Cap Absorption Enhancement Alert
**PROTN10 = Satellite Proton Event Alert at > 10 MeV
**PROTN100= Satellite Proton Event Alert at > 100 MeV
**PROTNENH= Satellite Proton Enhancment Alert at > 10 MeV
**MAGSI = Magnetic Sudden Impulse Alert
**245STRM = 245 MHz Radio Noise Storm Alert
**TENFLR = Tenflare Alert
**SWEEP = Sweep Frequency Event Alert
**FORBUSH = Forbush Decrease Event Alert
**GLE = Ground Level Event Alert

Each of the alerts may be followed by a colon and very terse descriptive
text describing parameters of the event. For example, the alert section
within this example reads:

ALERTS=**MAJFLR:X1.1/2B,N20E29(6857),0523-0555-0641,II=2@0551,IV=3@0602;
MINFLR:M4.4@0111;MINFLR:M2.3@0528;**MINFLR:M1.6@1209;
**TENFLR:2200,DUR:N/A

This line consists of FIVE alerts (each set of double asterisks denotes the
start of a new alert): One major flare alert, three Minor Solar Flare alerts
and a Tenflare alert. In this example, the major flare was a class X1.1/2B
event located at N20E29 within Region 6857. It began at 05:23 UT, peaked at
05:55 UT and ended at 06:41 UT and was associated with a Type II sweep
(importance 2) at 05:51 UT and a Type IV sweep (importance 3) at 06:02 UT.
If a tenflare would have been associated with this event, it would have been
treated as a separate alert with a time corresponding to the time of the
major flare. In this ficticious example, no tenflare was observed.

The first minor solar flare was a class M4.4 which occurred at 01:11 UT.
The second was a class M2.3 at 05:28 UT. The third was a class M1.6 at 12:09
UT and the Tenflare was observed at 22:00 UT. The DURation of the tenflare
was unknown (not available) at the time the report was compiled.

Notice that the last alert is not followed by a semicolon. This marks
the end of the alert section.

LAST LINE

!!END-DATA!! : The last line of the daily report will ALWAYS contain this
final statement, which signifies the end of the data set.

FINAL NOTES

Additional warnings and alerts may be added to those mentioned here.
The format of this data set may also change over time. Data may be
added or deleted from the existing data set. However, for the most part, the
structure will remain the same. Comments may be appended to the message
following the dataset (ex. following the !!END-DATA!! marker), although this
will not be a common practice. The length of the daily data set should be
approximately 15-16 lines, but may vary slightly depending on the number of

warnings and alerts that are active during each day.

This is the same data set that is sent to other organizations and institutions for research or professional purposes. Individuals or organizations with a need to directly receive this data through email should send requests for placement on the mailing list to: Oler@Hg.Uleth.CA, or to: COler@Solar.Stanford.Edu. Only those with a professional need, or those who receive the data too late to be of value, are encouraged to request direct access to the mailing list.

There may be infrequent days when no data sets are broadcast. This may be due to local computer problems, or perhaps possible problems with sites forwarding the data sets through the nets. In most circumstances, the data sets should arrive daily. They are usually released once a day, sometime after approximately 02:00 to 03:00 UT. This time lag into the new UT day is required so that all of the data associated with the previous UT day may be collected and processed for inclusion with the daily data set.

** End of Daily Solar Geophysical Broadcast Description **

558. STS-45 VOICE QSOs!

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 11:11:45 UTC
From: kj9u@uhm.ampr.ORG
Message-ID: <10984@uhm.ampr.org>
Source record: 291435

So far Hawaii has had 3 voice passes that I know of. On each pass someone
at my station made contact (about 80 watts to a vertical j-pole.)
Signals are not as strong as from Mir, but
at least a couple minutes of each pass were easy copy on the j-pole.

First pass was 27 Mar 0331-0340 UTC.
Second pass was 28 Mar 0339-0346 UTC. (Even though only 7 or 8 degrees high,
this is when NH6YM made contact using 5 watts to a 1/2 wave ringo ranger!)
Third pass was 29 Mar 0212-0221 UTC.

Seems to be a pattern emerging... 0200-0400 looks like prime time for SAREX!

Aloha de KJ9U/KH6 (John Shalamskas, kj9u@helium.chem.hawaii.edu)

How fast does it send anyways, I know that there is a setting for a
delay or time period of 450ms or 750ms, is this the delay before burst or
length of burst? I'm just curious if it goes "groink", "beedleoodleoop" or
"beep..boop..beep..bop" :-) :-)

>I have seen a posting stating that ALINCO has a fix to slow down

+>the rest of her life (I wonder if she'll remember w/o the aid of the tape?).

+WOW!!!
+Guess I'll have to revise my opinion of Dave Letterman slightly; he's always
+struck me as a prime asshole (I was especially turned off by the intervierw he
+did with Charlie Kerfeld (at the time, a Houston Astros pitcher; this was
+during their 1986 championship season)).

Well, maybe he worked it out earlier on in the show when he grilled
Charles Grodin about how much he hated dogs. It was not a pretty
picture.

Anyway, Veronica's parents hold Technician and Advanced tickets [ma
and pa respectively].

She made contact with N2ODO, Jeanie, who didn't believe [at first] that
it was David Letterman she was talking to.

562. Info/opinions on Alinco

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 22:37:25 UTC
From: donnyj@milton.u.washington.edu
Message-ID: <1992Mar29.223725.29154@u.washington.edu>
Source record: 291439

I'm looking for any feedback regarding Alinco radios (specifically their
HT'. I'm thinking about getting the new DJ-580. Any advice?

Thanks in advance,
Don,
KB7JKA

BTW, does anyone know of any mods for the Yaesu FT-212RH?

563. Replacing LCD light bulbs in Alinco radios

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-29 22:46:48 UTC
From: wa2ise@cbnewsb.cb.att.com
Message-ID: <1992Mar29.224648.26886@cbfsb.cb.att.com>
Source record: 291440

copied this from packet. This article doesn't say which models of
radio this refers to, unfortunately. Except an indirect reference
to the DR110 and DR410. Begin article:

If you are not used to working on these small circuits
send the radio to your local ham repair station.
I cannot teach soldering via packet radio so
only do if you can solder in small places.

STEP 1 - Remove top and bottom cover

STEP 2 - Remove 3 knobs from front of radio

STEP 3 - Remove nut from shaft of the channel selector

STEP 4 - Remove nut from the microphone connector

STEP 5 - Remove front plate from radio, This has
snaps on top and bottom, SO BE CAREFUL !!

STEP 6 - Remove 3 small philips screws that hold
the PC board to the front of the radio.
DO NOT CUT WIRES !!!

STEP 7*- Locate tabs that are holding the display to
the PC board and bend straight. BE CAREFUL
DO NOT BREAK OFF !!!

STEP 8*- Remove display from pc board and set aside.

* Step 7 and 8 can be eliminated if you can find
the 2 lites that light up the display from the back
of the pc board

STEP 9 - Locate lites (6). 1 lite under the off/on sw
3 above the row of small switches. These 4
lites have a blue rubber cover on them.
2 lites mounted where the lcd display was.

STEP 10- Replace lite under power switch, remember to
use the blue cover over the new lite as well
as the yellow sleeves on wires. This lite
you solder from the front.

STEP 11- Replace 3 lites that are above the micro switches
on the front of the pcboard. This will have
to be un-soldered from the back. Also replace the blue
covers over the 3 lites.

STEP 12- Replace 2 lites that stick through holes that
go where the lcd display is, also replace the
yellow sleeves. These lites solder from the back.

STEP 13- Re-install the lcd display and be sure there is
no contamination of the contacts on the board and
lcd display. Be shure to re-twist the tabs on the
display that goes through the pc board. This display
must be tight to the pc board or the display will
not work either with missing lcd segments or
no segments on. This lcd display shows the freq.
signal strength, channel number, and other functions.

STEP 14- Test the display by powering up the radio. If you
are getting missing numbers, pull the lcd display
and clean the contacts on the pc-board and the
display. I did by scrapping the pc board with a
screw driver as well as the lcd display contact
ribbon.

STEP 15- assemble the radio and check the display at each
major assembly point.

STEP 16- Reset the cpu as shown in your owners manual. This
is because that the cpu is located on the board
you were working on and may have some bad data after
working on the rig. You may have to reset the cpu
when you test the rig in order to show the
full lcd display

THANKS AND 73'S

FRANK N2JYG @ WA0PTV.#WNY.NY.USA.NOAM

a special note: i have had an alinco dr-110 for the last several
years on the shermn <n2jyg-3> node f loacated in sherman NY
and it keeps on ticking even when the storms roll through. As well as
A DR-410 and no problem, except for the lcd lites....oh well !!!
==========
Note: I haven't tried or verified this, proceed at your own risk. WA2ISE

SPRING AO-13 TRANSPONDER SCHED

HR AMSAT NEWS SERVICE BULLETIN 088.03 FROM AMSAT HQ
SILVER SPRING, MD MARCH 28, 1992 BID:$ANS-088.03
TO ALL RADIO AMATEURS BT

AO-13 Spring Schedule Announced

The new spring schedule for AO-13 is announced as the following:

QST de G3RUH/DB2OS 16Jan92 ** AO-13 Transponder Schedule **
experimental schedule Mar 16 - Jun 08 in response to feedback.
Mode-B : MA 000 to MA 100 ! Mode-JL ON Mon, Wed !
Mode-JL : MA 100 to MA 120 ! Fri and Sat UTC only. ! Blon/Blat
Mode-LS : MA 120 to MA 135 ! S Beacon on "L" days ! 180/0
Mode-JL : MA 135 to MA 150 ! S Transp on "B" days +-----------
Mode-B : MA 150 to MA 256 ! See AMSAT-Journals and Packet
Omnis : MA 240 to MA 030 ! Radio Bulletins for full details.

Mode-B and Mode-L Days Explanation From DB2OS

By listening to the transponder (Yes, we do!) we observed that the
transponder switching between B & L days (UTC only!) is not fully under-
stood. I hope the following explanation will help.

The satellite software looks every MA count into the schedule table and compares the numbers. If there is an equal MA count, then the transponder switching will be executed. If the command includes Mode-L switching, then it will be first checked to see if it is a Mode-L day. If not, then this instruction will be ignored and not executed.

This all means that Transponder Schedule switches only occur at fixed MA counts. On Mode-B days (UTC) all switches which include Mode-L transponder will be not executed.

In practice it may happen that the day changes between Mode-B and Mode-L transponder switching. Let's assume we switch to Mode-JL at MA 100, to Mode-LS at MA 120, to Mode-JL at MA 135 and back to Mode-B at MA 150. If we have a Mode-B day and we go over into a Mode-L day at 00:00 UTC and if we are at MA 110, then the Mode-B transponder will be in use until the next Mode-L instruction which occurs at MA 120 (Mode-LS). There will be no switch at MA 110 to Mode-L. In this case the L schedule will not start at MA 100, but at MA 120!!

But, if we are at 00:00 UTC at the begin of a Mode-B day and we have Mode-L running at MA 110 (because we switched to Mode-L on MA100 on the previous Mode-L day!) then the transponder will stay in Mode-L operation until MA 150, when a new Mode-B instruction follows.

This may sound a little bit confusing, but in fact it is very simple. Take the transponder schedule of AO-13. All what you need to know is that any transponder switch will only occur at the given MA count. All transponder switches which include Mode-L will only be executed on a Mode-L day, otherwise the last transponder switch will be in effect. Indeed, every Satellite Day will begin at 00:00 UTC!

****

AO-10 is currently available for Mode B operation when it is view of your QTH. PLEASE DO NOT attempt to use AO-10 if you hear the beacon or the transponder signals FMing.

SB SAT @ AMSAT $ANS-088.04
AO-16 EXPERIMENTER'S DAY

HR AMSAT NEWS SERVICE BULLETIN 088.04 FROM AMSAT HQ
SILVER SPRING, MD MARCH 28, 1992 BID:$ANS-088.04
TO ALL RADIO AMATEURS BT

AO-16 Experimenter's Day Schedule

The AO-16 Command Team has announced the following PACSAT Experimenter's Day schedule for April and May:

DATE START TIME END TIME MODE

01 Apr 2220 UTC - 31 Mar 2155 UTC - 01 Apr RCO
08 Apr 2045 UTC - 07 Apr 2152 UTC - 08 Mar RCO/RELOAD
15 Apr 0505 UTC - 15 Apr 0432 UTC - 16 Apr RCO

22 Apr 0320 UTC - 22 Apr 0250 UTC - 23 Apr RCO
29 Apr 0640 UTC - 29 Apr 0610 UTC - 30 Apr RCO
06 May 2035 UTC - 05 May 2145 UTC - 06 May RCO
13 May 0455 UTC - 13 May 0425 UTC - 14 May RCO
20 May 0310 UTC - 20 May 0245 UTC - 21 May RCO
27 May 0625 UTC - 27 May 0600 UTC - 28 May RCO

RCO: Raised Cosine Only, No S-Band.

QRP operations are encouraged on Experimenter's Day. Uplink power should be limited to 20 watts EIRP. If you are using your AO-10/13 beams, this means you must crank your power back to about as low as it will probably go, no more than 2 watts. And don't forget to turn off your amplifier!

While Experimenter's Day operations are scheduled to be conducted weekly, users are reminded that these operations may be shortened or canceled to allow uploading of improved spacecraft software. Watch for bulletins on the AO-16 BBS and/or the telemetry text frame for changes to the schedule.

It is currently planned to SHUT the BBS on the 8 April for several orbits to reload a portion of the spacecraft software to clear a stuck user. During this reload, the raised cosine transmitter will be on but the BBS will NOT be available. Watch the telemetry text message for BBS availability and consult future ANS bulletins for updates/changes to this schedule.

[ANS thanks Bruce Rahn (WB9ANQ) for this bulletin item.]

W9JUV REPLACES KO5I

HR AMSAT NEWS SERVICE BULLETIN 088.05 FROM AMSAT HQ
SILVER SPRING, MD MARCH 28, 1992 BID:$ANS-088.05
TO ALL RADIO AMATEURS BT

W9JUV Takes The Helm On Phase 3D Fundraising Effort

With Doug Loughmiller (KO5I) still on the sick list, AMSAT President Bill Tynan (W3XO) was forced to take action to obtain temporary help in the Phase 3D fundraising effort. Answering the call for a pitch hitter for Doug was AMSAT Life member Joe Schroeder (W9JUV) of Glenview, Illinois. Joe will be assisting AMSAT for a limited period, until Doug's doctors give him the OK to return to his previously full schedule. W9JUV needs no introduction to many amateurs as he became well known as the editor of Ham Radio Report back in the 70's. He has extensive experience in the field of public relations and promotion and is an accomplished writer. President Tynan told the AMSAT News Service (ANS) that he is confident that Joe Schroeder will to be of great assistance in keeping the Phase 3D fundraising campaign, initiated by Doug, on track.

Bill also noted that he has no late news on the condition of Dough Loughmiller. Doug saw a new specialist the week of March 23, who conducted numerous tests. It is hoped that these tests will enable Doug's doctors to come up with a definitive diagnoses soon.

Keep tuned to ANS.

STS-45 SAREX UPDATE: PART I

HR AMSAT NEWS SERVICE BULLETIN 088.06 FROM AMSAT HQ
SILVER SPRING, MD MARCH 28, 1992 BID:$ANS-088.06
TO ALL RADIO AMATEURS BT

KA3HDO Provides STS-45 SAREX Mission Status Report 03/28/92: Part I

The Shuttle Amateur Radio Experiment (SAREX), flying on STS-45, has been an overwhelming success thus far. Shuttle amateur radio operators Dave Leetsma (N5WQC), Brian Duffy (N5WQW), Kathy Sullivan (N5YYV), and Dirk Frimout (ON1AFD), have given a new meaning to the phrase "the ultimate DX-pedition" by making numerous general QSO contacts, answering questions from students throughout the world, and talking to their families via amateur radio. Moreover, the national and international publicity from SAREX during this mission has been probably the most ever generated for amateur radio during a single event.

Fifteen of the 17 scheduled school group contacts have been successfully completed. The last two to be completed soon. Literally thousands of students, teachers and family members have participated in the school contacts. Of these, over 50 to 75 students have asked excellent questions to the astronauts on the space shuttle. Contacts were made with schools in the following countries: Wales, Norway, Alberta Canada, Brazil, Spain, Belgium and England. Contacts made in the U.S. and it's territories included school groups from San Diego, California (2 schools), Maynard, Massachusetts, Orangeburg, South Carolina, Seabrook, Texas, Longwood, Florida (an 11 school link-up), Saipan, Marianas, and San Jose, California.

The Shuttle crew have demonstrated their multi-lingual abilities during the school contacts. Payload specialist Dirk Frimout answered his questions from the students at the Belgian Space Camp in French and Dutch. Mission specialist Kathy Sullivan used some of her Norwegian when she spoke to the students at the school in Holden, Norway.

[The AMSAT News Service (ANS) would like to thank Frank H. Bauer (KA3HDO), AMSAT V.P. for Manned Space Programs, for this ANS bulletin item.]

/EX
SB SAT @ AMSAT $ANS-088.07
STS-45 SAREX UPDATE: PART II

HR AMSAT NEWS SERVICE BULLETIN 088.07 FROM AMSAT HQ
SILVER SPRING, MD MARCH 28, 1992 BID:$ANS-088.07
TO ALL RADIO AMATEURS BT

KA3HDO Provides STS-45 SAREX Mission Status Report 03/28/92: Part II

The biggest surprise of the mission occurred during the contact at the Ed White elementary school in Seabrook, Texas. Astronaut Brian Duffy's children Shannon and Shaun, were two of six students who asked questions to Duffy. Shaun, 11, had secretly worked on his amateur ticket and passed the exam the night before. At his turn on the mike, young Shaun asked "How would you react if I told you that I passed my ham radio novice and technician test?" His father was floored, stating "is that right? When did you do that?"

Numerous radio and TV stations and newspapers have covered the SAREX activities throughout the world. Many of the foreign countries had their national radio and TV stations and their newspapers cover the astronaut communications with the students. In the U.S., the most notable press coverage was a live and taped interview with the students at the Ed White Elementary School which aired on CBS morning news with Connie Chung on 3/27. The Shuttle crew have periodically kept the ham community informed of their general QSO results through the NASA select mission audio. The SAREX team has learned of numerous contacts made near Washington D.C., Los Angeles, Hawaii, Texas, Canada, Australia, throughout the South Pacific and in Europe. They have confirmed working stations on all continents except Africa and Antarctica. With the school groups now almost completely out of the way, a significant increase in general QSOs is expected.

Several Shuttle/MIR contacts have been attempted with no luck so far. With the recently launched cosmonauts just getting settled into their new environs, it is understandable that they have been too busy to make a contact. Crews in the U.S and in the Soviet Republic are making a concerted effort to support the first ever Shuttle/MIR amateur radio contact.

[The AMSAT News Service (ANS) would like to thank Frank H. Bauer (KA3HDO), AMSAT V.P. for Manned Space Programs, for this ANS bulletin item.]

dans@rehab2.UUCP (Dan Schein) asks:
>
> I have the 800Mhz mod (not done yet) but am looking for any other
> mods.

Don't waste your time with the 800mhz mod. When I tired it, I found out
that the resistors that were specified in the mod were the wrong ones.
I think they should be 10 ohm, but check the documentation that came
with the radio first.

Also when it is installed, nothing happens. The radio works as it should,
including scanning (over 806mHz), but it never receives any signals. Here in
Northwest Philly it's not exactly loaded with celular phones and
800mhz pagers, but I should have gotten something. :-(

566. Icom IC-2SRA Mods

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 04:09:48 UTC
From: TPDugan@dockmaster.ncsc.mil
Message-ID: <920330040824.343731@DOCKMASTER.NCSC.MIL>
Source record: 291443

I recently inquired about mods for the IC-2SRA, but didn't get any response, except for some requests to share anything I learned.

So I figured it out myself, and here they are:

IC2SRA Summary: Extended Receive, Extended TX (136-174 MHZ)

Modification Instructions for the Icom IC-2SRA Handheld

The IC-2SRA appears to be very similar to the IC-W2A, with a Wideband Receiver unit replacing the UHF RF unit. Not having an IC-W2A or the service manual for it, I can't be sure. This mod is very much like the IC-W2A mod by AA7BQ, which I used as a starting point.

Extended Receive

Right out of the box, the IC-2SRA Ham Band will tune 136-174 MHZ, and transmit 140-150 MHZ. Although the Receiver Band will tune 25-950 MHZ, sensitivity is better on the Ham Band side. Direct entry of frequencies outside of the amateur band is not as convenient as it could be. But there is an undocumented (by Icom) feature which makes it easier. Enable extended receive by holding down the 3, B, and # keys while turning on the power. Keep your fingers on the B and # keys for a minute, and you can see the full LCD function display. Besides what is normally seen, there are also VOX, TOT, RIT, and VXO displays. Makes one wonder if there are additional undocumented features? I haven't a clue! There are other key combinations which will do the same thing. With this done, the dial select step can be set to 10 MHZ, and the first digit for frequency input can be selected as 100 MHZ in SET mode. The display will now go from 50-500 MHZ, but don't think that you can receive in that range. You can believe signals in the 136-174 MHZ range, but outside of that you are most probably hearing images.

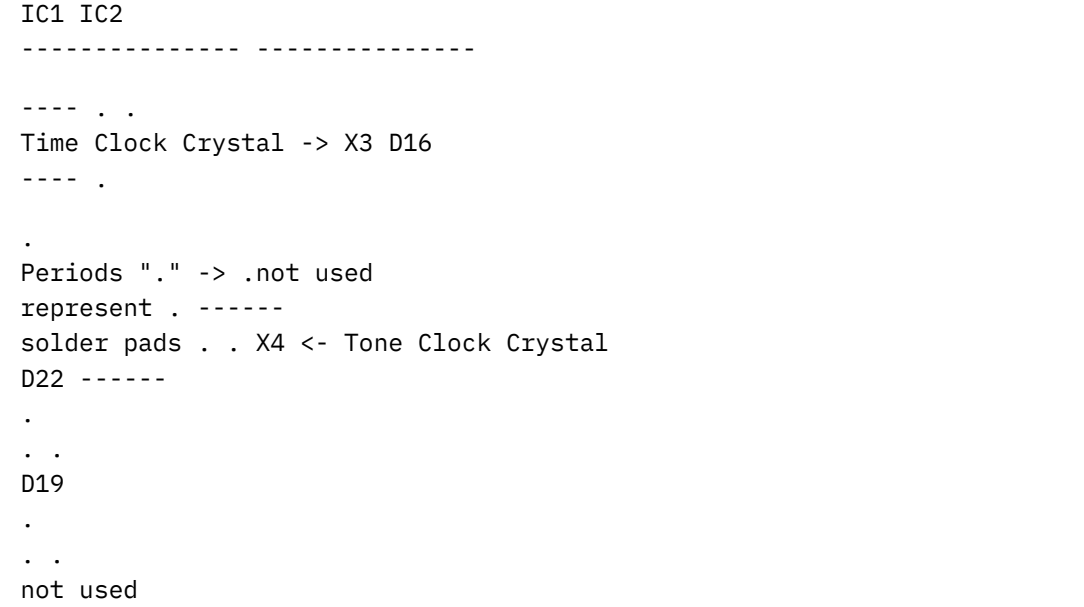
Extended Transmit

This is the fun part. The radio is designed to allow a wide range of applications, meeting amateur band requirements all over the world. This is accomplished with a diode matrix on the Logic unit. For the US, this involves diodes between lines D2 and 10 (D16), and between lines D3 and 11 (D22), on the Main CPU (IC2). To open up the full 136-174 MHZ range for transmit, diode D22 is removed, and diode D19 is instaled between IC2 lines D0 and 11. The diodes are very small three legged surface mount components. Icom doesn't publish any information on the CPU logic (that I know of), so I'm not sure just why any of this works. But it does work!

Start by ordering one MA133 diode, order number 1790000860, from Icom America customer service in Bellevue, WA, at (206) 454-7619. Don't bother trying to order through one of the regional service centers, as they normally just forward part orders back to the corporate headquarters anyway. Cost in March 92 was $2.43, plus $1.75 handling. I don't know if they have a minimum; I ordered four diodes which brought the Visa charge to a litle over $10.00.

When the diode arrives, it's time to open up your radio. You need a set of small Phillips head screwdrivers which can be found at any Radio Shack. Remove the five screws on the back, and two smaller screws on the side of the case under the PTT switch. Don't worry about the screw for the handstrap, it is screwed into the metal back and comes off with the back. With the screws removed, the back is easily lifted off. This much is shown pretty well on page 57 of the instruction manual where it talks about installation of the UT-63 (which is already installed in the US version of the IC-2SRA). Now remove the UT-63, and the PTT rubber. In front of you is the Receiver unit, stacked on top of the VHF RF unit, which is on top of the Logic unit. That is where we need to end up, so start disassembling. The Receiver unit is held to the VHF RF unit by a small screw on each side. You won't have any trouble figuring out which ones they are. There is also a small screw at the bottom of the Receiver unit, which fastens a spring clip holding the two units together. Remove the screws, and keep track of them. Both units are then individually removed by gently unplugging them from the Connector unit with a down and out movement. At this point you should be impressed by the well thought out design of the radio, and the ease with which it can be taken apart. In front of you now is the Logic unit, but there is a plastic encased metal foil, the CPU shield, still in the way. This shield is under the wiring harness between the Logic unit and the Connector unit. It isn't attached to anything, and can be gently curled and slipped out to the right.

Here's kind of what you'll see under the CPU shield:



.

Now the fun really begins! The diode that you received in the mail, and the one that you have to remove, are very small. They are also quite rugged, so don't let the size intimidate you. You do need to be clever about it though, and there is certainly more than one right way to go about it. You need a magnifying glass of some sort, and a fine tipped soldering iron. I wrapped a piece of solid No. 12 copper wire tightly around the tip of my 25 watt Weller. I brought a one inch lead straight out from the tip, and filed the end smooth. Ready for pin point soldering, start by removing diode D22. I put a knife blade under one end and applied light pressure while touching my No. 12 tip to the diode lead closest to the knife. Then the next lead, and the last one. Pops right off with no problem. You're not going to reuse it (unless restoring to original configuration), so it doesn't matter if it does get dinged up a bit. With D22 out, all that's left is installing D19. I used a pair of tweezers to place the diode in position, with the three leads sitting on top of the little blobs of solder already on the board. Then gently holding the diode in place with a toothpick, I tacked each lead in place. Don't add any solder, there's enough on the board already to do the job. After one lead is tacked down, the diode will stay in place without the toothpick. As I said, there are other ways to go about installing this very tiny diode (actually there are two diodes in the little chip), so do what makes you comfortable. Or find a friend with a steadier hand to do it for you!

Now you just put it all back together again, starting with the CPU shield. If you have trouble sliding it into place, you might be trying to put it between the wiring harness and it's plastic backing.

After the extended transmit mod the CPU resets itself (at least it did for me), but now you have the same features provided by the extended receive mod, without having to repeat the mod. You also can transmit 136-174 MHZ. As to be expected with a unit designed with 145 MHZ as the center frequency, performance varies. At 145 MHZ my handheld put out 7 watts into a dummy load. It does that throughout the 2 meter amateur band. At the ends of the "designed" transmit range, 140 and 150 MHZ, the power is down to 6.8 watts. Dropping down from 140 to 136 MHZ, the power is down to 6.2 watts. Going up from 150 MHZ, I got readings of 5.75 at 155, 4.25 at 160, 3.2 at 165, 2.2 at 170, and 1.75 watts at 174 MHZ. These readings are with a Radio Shack meter, so your mileage may vary. Nevertheless, a remarkable radio!

Enjoy, and please don't transmit on frequencies you're not licensed for!

Tim KA3YYP TPDugan@dockmaster.ncsc.mil

567. Needed: Contest QSL routes

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 04:14:14 UTC
From: GR6588%SIUCVMB.BITNET@cunyvm.cuny.edu
Message-ID: <9203302012.AA08742@ucsd.edu>
Source record: 291444

Since QSL routes has been such a hot topic on the net, here is my request.
These are a few that I worked in the WPX contest over the weekend. Any help
would be appreciated. Thanks in advance.

Need routes for:

TK5A
TI1C
ZF2NE/ZF8
CT3M
5U7M
ZP0Y
P49V
J68AX
XE1TD
VP2EC
XE1BEF

Thanks again....

Kelly

568. SMC Connectors - Power Limit?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 04:20:41 UTC
From: jweiss@casbah.acns.nwu.edu
Message-ID: <1992Mar30.042041.404@casbah.acns.nwu.edu>
Source record: 291445

What are the power (or voltage) limits for smc connectors (50 ohms).
Is it okay to run 50 watts or so at UHF through these?

tnx, Jerry WB9MRI

wapembe@afterlife.ncsc.mil (Willaim Pemberton) says:

Subject: Re: Can no-code Tech use CW on VHF?

>I may be wrong but shouldn't you be able to operate any mode within
>your operating class? I was not given a voice test but have worked
>voice :) I would thing that as long as the band section permitted
>cw, you should be able to use it. I think that this provides an
excellent way for the no-code tech people to improve their cw abili-
>ties. later.

I heard that in a couple of day or so, the FCC is going to require a
minimum CW speed. Basically, you won't be allowed to send slower
than the highest speed at which you passed a test. Thus, Extras will
have to send at least 20 wpm at all times, Novices a minimum of 5 wpm.
So while two no-code Techs can practise CW at 2-3 wpm, as suggested
by the original poster, because they haven't yet passed a code test,
a Novice won't be allowed to send as slowly as this, and thus won't
be able to help a no-code ham with cw slower than 5 wpm.

Every once in a while the Canadian government does things the right way. I can't recall the precise numbers, but when I wrote my (codeless) basic and advanced qualifications, I walked out of the building with a call sign and authority to operate - and I still had some time left on the parking meter. I believe I'd put in enough quarters to give me 3 hours parking - don't recall exactly how much time was left, but those people who hover over their mailboxes for weeks on end have my sympathy.

I'm not _really_ a prude, but I play one on the USENET.

Since we're on the topic of children...

I remember a day when one 'watched your language' as a customary social courtesy. It was accepted to speak 'french' in the company of your friends, if that was what you did, but in public, esp around 'mixed' company, people used to refraim from using some of the more direct anatomical and other references. Alas, nowadays you can hear people swear a blue streak in the office next to yours, the table next to yours in a restaurant, on public transportation (OK, people ALWAYS swear on/at public transportation)

But, you get my idea? Why is it that we've lost so much character that we degrade ourselves and our language by plucking the nastiest, most offensive term we can to describe ourselves?

For the sake of those who strive to be courteous, friendly, and socialy adept please think TWICE before spouting such uneccesary prose, don't you agree?

After all, KC6TQR may be reading the mail..... :)

Gee, I guess I got lucky. I got mine back in 4 weeks and a day. I was expecting at least 6-7 weeks, even though it went "direct" to the FCC (Novice exam only, courtesy of a couple of General-class co-workers). It went out in the mail on February 27, and my license arrived on March 27. Only problem is, they gave me these *weird* call letters: KB2OOA. Hmmm...Should I change them, I wonder? I have my General upgrade sitting at the VEC waiting for a photocopy of my license. Or maybe I should wait till I make Extra (yep, I'm an optimist!) so I can get one of those neat little calls...BTW, should I expect the upgrade to take as long as a new license?

Source record: 291455

I heard the following communication from sts45, and even though I don't have my license yet, I'd like to apply for an 'SWL' which I understand is available from some ARC some where.

Can anyone send me the details ?

Thanks, Ken Cochran kwmc@usl.com

Equipment
Radio Shack HTX-202 Handy talkie with rubber duckie. 145.55 Mhz
location, outdoors in Union NJ, at Exit 140 on Garden State Parkway.

Thu 3/26

First heard 8.35am unintelligble
8.37am Eastern time
clearly heard comment from N5WQC regarding "just passed over Great Lakes"

next heard acknowledgement of a contact's callsign

next heard comment to effect that shuttle was unable to return some calls yesterday due perhaps to antenna pattern

8.40 am Eastern time heard no further downlink.

579. Sony ICF-2001 Scanner / Trio 9R-59DS Mods.

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 13:58:51 UTC
From: eeiswh@eeiua.ericsson.SE
Message-ID: <9203301357.AA06406@eeiua>
Source record: 291456

I am an SWL in Ireland who has just acquired some new receiving equipment and I have one or two problems:
I have a Sony ICF-2001 scanning receiver with an AN-1 active antenna for 150kHz-30mHz and an AN-3 antenna for
76-136 mHz (FM and AIR bands). Sony in their wisdom supply the active antenna without any lightning arrestor
gear. They recommend you take the antenna down any time there's an electrical storm but this is obviously not
practical as I want to put the damn thing on top of my roof! Has anyone come up with a way of protecting the
electronics? Also, does anyone have mods for extending the frequency coverage to 144mHz and adding a squelch
circuit?
I also have a Trio (now Kenwood) 9R-59DS communications receiver. It is fairly old and entirely
valve-based. Does anyone have a schematic for a digital frequency readout for this thing? It has a standard
IF offset of 455 kHz (I think!)
I would be very grateful if someone can help me.
Best wishes,
Simon Woodworth.
(Ericsson Systems Expertise, Athlone, Ireland)

>of automotive power (with the car running).

That 8 watt figure might help getting into the repeater from the fringe
or making and keeping that simplex contact, BUT... It exceeds the ANSI
safe RF power limit for handhelds of 7 Watts.

If your meter is accurate, you've uncovered what I'd consider a severe
safety standards violation.

Any comments anyone?

586. Several Questions

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 14:54:59 UTC
From: radneyt@iccgcc.decnet.ab.com
Message-ID: <1992Mar30.095459.7679@iccgcc.decnet.ab.com>
Source record: 291462

Lots of questions....

1) I bought a Pearce-Simpson Gladding 25 2-meter FM Transciever
at a hamfest. It ssems to be ok. Anyone have a manual for this
radio? A tune-up procedure? Ever heard of it?

2) Are the Alinco DJ-100T and the DJ-120T modifiable into the
Public Service band. Specifically in the 154 MHZ range?
Any recommendations/don't buy comments? If modifiable does
anyone have the mods they can send me?

Appreciate all the help,
Thanks and 73

587. Re: Satellite trackers for Suns

Me too, especially if it does graphics under Sunview or X.

I sent the Sunview version of Orbit to be put up for FTP recently.
Here are the details:

From: Joel Harris Glickman <uunet!rpi.edu!glickj>
Date: Thu, 13 Feb 92 11:49:42 -0500
To: vail@tegra
Subject: orbit

I've pieced everything together and have made it available for anonymous
FTP from aix.rpi.edu (128.113.26.11) under pub-write/orbit.tar.Z
-Joel

If there is a problem with it, let me know and I can send it out to
someone else. I can't FTP myself and I also cannot afford to email it
to everyone.

Hmm. Do ANSI standards apply to equipment which is 1) not being used in
an industrial or commercial environment, and 2) not being used in the manner
the manufacturer intended, and 3) is manufactured overseas for
amateur EXPERIMENTAL service use?

From: ward@metsat.met.fsu.edu
Message-ID: <30MAR199210343276@metsat.met.fsu.edu>
Source record: 291465

Some time ago, there was some discussion regarding a problem with the Alinco 590 that was corrected in the new 599. If memory serves (and it often doesn't :-)) the problem was with temperature sensitivity of one of the features (cross-band repeat??) of the radio. If anyone has any clue as to what I'm talking about, I would appreciate it if you could send me email and refresh my memory. Thanx!

Message-ID: <1992Mar30.094757.105@mcopn3.dseg.ti.com>
Source record: 291466

I am looking for recommendations for a good Pc based software package for calculating propagation. It would also be nice to include a map generator.

I am looking for something shareware, so the location of an ftp site would be appreciated.

If you know of a commercial package, that would also be interesting.

I had a Pearce-Simpson Gladding 25 in 1974 and it was a dog.

It was a 6 channel crystal controlled 2m FM transceiver.
The receiver was actually AM, and used slope detection
to receive FM!

The transmitter final amp used a variant from the 6146 family
and got so hot, the plastic cover melted. I built a cover
from sheet metal like other Gladding 25 owners did.

There was no mike cable connector or strain relief, so the mike
cable kept breaking.

A DC-DC inverter was located inside the transceiver and
produced characteristic "T-power" whine on transmit.

The matching external power supply is unregulated so it can
deliver up to 17 VDC when unloaded!

Sorry, I didn't keep any documentation.

599. Radius P200 programming SW

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 17:00:20 UTC
From: turini@gdls.UUCP
Message-ID: <3302@gdls.UUCP>
Source record: 291475

The local Motorola rep and I want to get some Radius P200s for our group to use on my local 440Mhz repeater. He is a Gov't systems rep and has the software and cables for the Motorola HT600, which is the commercial version of the Radius P200. As you might guess, the programming software is different between the radios. Fortunately, the cables are the same, as it the RIB box.

Due to compartmentalization within Motorola, he is unable to get a copy of the programming software for the P200. Does anyone know where we might get a copy of this? I have even inquired about purchasing a copy from the local Radius rep, but they wouldn't even tell me the cost.

Any help or information would be appreciated.

Thanks & 73's

603. Where to put my antenna (dipole)??

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 17:35:28 UTC
From: acecoder@wam.umd.edu
Message-ID: <1992Mar30.173528.14175@wam.umd.edu>
Source record: 291479

I purchased my first ham radio this past Saturday at a local HAM-FEST. It's a Hellicrafter's Co. SX-110. It's old, but works good. I also purchased a dipoleantenna (G5RV I believe is it's name). Anyway the antenna kit consists of: an Ansulator, 2 copper 51ft 14 gauge wires, and some ceramic insulators.

Unfortunately I still live at home and I'm limited as to where I can put my mighty erection. I believe I have narrowed it down to two possiblies. Either I put the antenna in the back (along my 6ft hi wood fence), with the center being in the corner, one 51' wire along the back fence and the other 51' wire along the side fence. The center (ansulator would only be about 10 to 15 feet off the ground!

My other option is to put the antenna in the Attic, or on the roof. Either way I will not be able to use the full 51' on either side of the ansulator, probablyonly about 20' on either side. But the antenna would be higher then if I put it along the fence. The center will be about 25 to 30 feet off the ground if I put it on the roof, and about 20 to 25 feet if in the attic.

Which would be the best for reception?

OH. By the way my SX-110 is an HF receiver.

Thanks,
Pierce

I am most certainly under 40, and have built a number of transmitters,
although I admit it's been about a month since I built my last one. Frankly,
I think it's a lot easier to build a CW rig than it is to program a VCR.
I still can't figure some of the VCR programming modes out.

607. TIMONIUM HAMFEST....They even had radio gear

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 18:22:22 UTC
From: pjstopa@crdec8.apgea.army.mil
Message-ID: <9203301312.aa15519@crdec8.apgea.army.mil>
Source record: 291483

oI spent this weekend at the Baltimore Amateur Radio Club (BARC) annual hamfest at the Timonium Fairgrounds in MD. This event originally started as a one day hamfest and several of the area dealers along with tailgaters came. About 4 or 5 years ago, the influx of the computer jockeys was felt and some of the clone dealers started showing up. SO you had 1 aisle of computer equipment and three buildings worth of ham gear.

Well times have changed. THis year there were two dealers and a few manufacturers exhibits (ICOM, MFJ, AEA, ALINCO, and several others> I'm surprised Ten-Tec wasn't there) of ham gear and three buildings worth of computer stuff. AND MY WIFE EVN INSISTED THAT WE ATTEND TO SEE THE NEW COMPUTER STUFF.

The moral of the story is - we need to get the computer jockeys involved in the hobby. It's nice to see them come and give the hams money to keep the old repeaters going, but we missed a golden opportunity. Instead of the ARRL guys sitting behind the desk and smiling, itwould have been nice if they had a video display of what ham radio is and how you can use your computer with it. So I would like to make acouple of suggestions:
1. To those of you involved with hamfest planning, how about putting together a booth or display as to ham radio is and how it can enhance your computer skills.

2. To the ARRL - How about a video or some other multimedia presentation to get the computer jockeys involved.

From what I've seen on the net there is much interest from potential no-coders from the computer community. I'm glad to see this. I'm also glad to see that no-one is expounding the virtues of CW and how real hams need to know it. Don't forget - this is a multi-faceted hobby. We need all sorts of blood to keep it going.

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 055 (OPDX.055)
March 30, 1992
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, K4CEF & Southeastern Cluster Group, DF4RD, AD1C, WK3N, N8HUR, W8IQ and K8YSE for the following DX information.

A5, BHUTAN. WZ9Q/A5 was reported on 14005 kHz around 1256z, on March 23rd and gave his QTH as Thimpu and QSL info as AK1E. KN4HW talked to AK1E, on the 23rd, and he stated he has been getting lots of inquiries, but does not know WZ9Q, and is not aware of any such operation. Chalk this one up as a pirate.

KH3, JOHNSON ISLAND AND KH9, WAKE ISLAND. Bill, KA3HMS, expects to be operating from Johnson Island on or about April 6th to the 7th and from Wake Island on or about April 22nd to the 25th. Activity mentioned will only be on 10 and 20 meters.

RT5UN/RY0U QSL CARDS. Nick, RT5UN has received QSL cards that were sent to John, K8YSE, at his request. NODXA's ambassador to the Ukraine, aka Mr. Myron, presented Nick with about 320 envelopes from both DX and USA amateurs on March 25th in Kiev. Nick also received the NODXA award for working 10 NODXA members. Nick says that some cards will be returned via Mr. Myron on April 6th. K8YSE will return the cards via US mail if you enclosed an SASE or postage/$. If you just sent a card, QSL's will be returned via the bureau. Cards for RT5UN received by K8YSE after March 21st are being held pending the possibility of another return visit to Kiev by Mr. Myron. You can check to see if your card made the trip by contacting John, K8YSE, at (216) 237-0199, evenings/weekends only please. John has a computer listing of all envelopes received prior to March 21st. At this time the only way to insure mail into the Ukraine is to send it via courier. We hope that this will change soon.

VP8, SOUTH SANDWICH ISLAND. After this DXpedition, Martti Lane, OH2BH, may want to write a book titled, "Why Did We Have To Come Here Next?". Martti, who joined the South Sandwich Dxpedition team was heard saying, "We are suffering." Yet the VP8SSI DXpedition continues to be active, but under horrible weather conditions for the operators. Tony, WA4JQS, stated that "South Sandwich Island is the worst place on earth." Winds have been blowing 35 to 50 MPH. Another operator was heard saying, "My hands are so cold, it is hard to turn the dial on the radio." Antennas

get put up during the daytime and get blown down during the night. Most of the operating seems to be on 10, 15, 20, 40 and some 80 meters. There was activity on 10102 kHz March 26th around 0330z, but very weak in 8-land. On March 29th, VP8SSI showed up on 24894 kHz around 1630z and 18070 kHz around 2145z. It was stated by one of the operators on March 27th that 160 meters looks doubtful. They have lost about 3 different 160 meter antennas because of the winds. During the night their second camp got washed out and the guys from the first camp had to rescue them. The washed out camp has now set-up in one of the Rescue Huts. They also had some generator problems, but Martti, OH2BH, was reported trying to fix it. Let's wish them a safe departure from this most inhospitable place. QSL via AA6BB (SSB) and KA6V (CW).

EDITOR'S SOAPBOX REPORT. Why is it that when a group of DXers who travel to a rare place (on their own free time), spend thousands of dollars and go thru extremely dangerous and hazardous conditions, have their operation become a target for deliberate and malicious interfernce? I get the feeling these guys who deliberately QRM DXpeditions must have their own serect club (QNDA - QRM the Next DXpedition, Anonymous). Who are these guys? No one knows, they're ANONYMOUS! It seems these guys must be funded as much as the DXpeditioners, they operate 24 hours around the clock, all bands and modes. I am sure there are some DXers who live near these QRMers but do not want to point the finger. This is understandable. The main thing a QRMer wants is attention and it seems they get it every time people make comments to try to stop the QRM. QRMers will continue to do what he or she wants to do no matter what. If everyone would learn to ignore the person who causes the QRM, they, in time, will leave. REMEMBER! They want an audience, DO NOT GIVE IT TO THEM.

YA5MM QSL CARDS. Igor, UT5UX, head of the recent YA5MM operation will be arriving in Sofia on April 12 or 13 to process QSL cards that have arrived by that date. He will spend about a week with the computerized logs and labels he has with him, and urges all who have not yet submitted requests to PO Box 321 in Sofia to do so immediately. Any cards not handled on this visit will be handled on a return visit in about a month. Total contacts were about 32000.

DXAC REPORT. A February committee report was released this past week. Here is a summary of a few items that the committee is discussing and working on:
PRATAS ISLAND - Waiting for petition from BV2VB before scheduling a vote.
VATICAN ENCLAVE (HV0HH) - DXAC voted down the recommendation of this enclave as a new DXCC country.
SPARTLY ISLANDS - Possible deletion due to the changes in occupation.
SOUTHEREN SUDAN - Possible deletion. Tentative schedule vote, June 1st.
DXPEDITION DISQUALIFICATION CRITERIA - Subcommittee continues to study this matter.
ABU-AIL - A request was made in the clarification of DXCC country status of this DXCC country since the British government

does not maintain the lighthouse any more.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

609. Wanted: Dayton Flea Market space

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 18:29:50 UTC
From: parish@think.com
Message-ID: <ktenguINNj9a@early-bird.think.com>
Source record: 291485

I know that this probably will not produce any results, however, it may provoke the usual discussions. My friends and I lost in the Dayton Flea Market lottery. That is, we did not get a flea market spot. We are planning on driving to Dayton and selling lots equipment at the flea market like we have for years. We are not one of those who uses the space for parking, we actually do sell equipment. If anyone has an extra flea market space for sale, we would be interested. I know that this sounds a bit ridiculous, but we are trying!

Not fair! You guys have that great climate, *and* the best shots at the
shuttle! :-)

I listened on nearly all the visible passes during the weekend, and all I
had to show for my efforts was hearing Mir on packet 3 times. :-(

Yet another good reason to move to Hawaii... sigh.

>Followups-to: rec.radio.amateur.policy
I dunno even in Chicago (where I am from)-- I don't see how anyone would
mind a slow CW contact if it wasn't on a calling frequency (like 144.200)
It'd be a bit ridiculous if someone complained about someone using a
narrow bandwidth mode on a frequency that otherwise would be unused.
(although there are ALOT of cranky hams--but apparently not many on VHF/UHF
CW or SSB...) Also, as far as I know, a "No-Code" Tech has the same
privliges above 50 MHz as all of us.. Including operating CW and a repeater.
(owning)
I wish hams would stop trying to discriminate. I am a "grandfather" tech
(pre Novice enh), and I don't appreciate getting told I am an idiot because
I never chose to learn code (>5 wpm). I have had more important things to
do in the past five years like get me EE degree and actually BUILD radios
equipment and the like. <off my soapbox>

In order to provide protection for the exposed terminals on the top of ICOM battery packs, snap a plastic tab insert for a Pendaflex file folder into the slides on top of the pack. This forms a tent over the top terminal. The tab insert can be trimmed with scissors for better fit at the end of the battery.

They work so well, you'd think they were specifically made for the job.

Don't forget the screws in the bottom of the packs. A strip of vinyl electrical tape takes care of that possibility of shorts.

ANSI isn't a governmental body or a regulatory agency. They are a private
organization that tries to establish standards that people can follow if
they want to.

You can run 500 watts at 2450 MHz into your eyeglasses if you want.
ANSI is just telling you that they think it's a bad idea. Even if it is
experimental, and not being used in a commercial environment.

The FCC stunned the amateur world when it announced today that it is creating a new class of amateur radio operator license, the Exalted Class. Ferd Frobish, spokesman for the Commission, told this reporter that the license was developed to reflect the general feeling among the Commissioners that "Ham radio just isn't what it used to be."

Frobish said that the traditional Morse code test will be supplanted by a more modern criterion. In an effort to silence critics who claim that Morse is an obsolete requirement, Exalted Class applicants will be required to copy, by ear, 1200 baud packet, including unnumbered acknowledgement frames, on blotter paper using a two-inch paintbrush.

The written portion of the exam will include questions on quantum electrodynamics and unified field theory. Even more difficult, the applicant will be required to demonstrate the ability to make sense of Wayne Green's editorials.

No new privileges will be conveyed with the new license, but Frobish said that the FCC will honor successful applicants by issuing the license as a ROM chip. Tests will be given starting April 1.

...almost - y'see, George Bush is not only a 33rd degree Mason, he is also a Templar. The Templars are responsible for the placement of alien antenna arrays along lines of telluric force (said antenas look exactly like ham antennas but are made of very special materials - electrum, impervium, taht kind of stuff). Bush was placed as prexy by the Templars in order to continue the supression of the FCC (who are all secretly members of a virulently anti-Templar sect called the "Hospitalers") so that the (apparently) obscene activity on 14.313 can continue without interruption. This is because certain 313ers are transmitting certain incantations mixed in with the obscenities. This is, of course only discernible if you know Lemurian or 20 wpm cw. And so on.....

Incidentally, Qabbalah buffs amongst you may have guessed why we have Dan Quayle - yep, we have The Fool placed with The Emperor!

Who says these underground masters have no sense of humor?

623. Re: AARL Repeater guide electronically?

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 20:58:09 UTC
From: steve@wattres.San-Jose.CA.US
Message-ID: <1992Mar30.205809.25167@wattres.San-Jose.CA.US>
Source record: 291499

Given my seeming fondness for abusing myself ;), I'm thinking about coordinating (or maybe just running myself) a repeater project very much like the UUCP mapping project, where each person could send in a repeater or three, and (hopefully) get good general coverage. This probably won't cover the serious backwaters of the country, but I'm not sure that's a real problem :) :) :). Only one thing: I notice that there's a copyright statement at the front of my ARRL repeater guide, so typing in the data directly from there is probably not a good idea.

Anyhow (this is for COMMENTS, it's not up yet), I'm setting up a simple server that would accept the following info, one repeater per mail message:

Callsign
Output Frequency
Input Frequency
CTCSS
Closed/Open (if closed, membership? - just a thought)
ARES/RACES affiliation
Autopatch/Autodial available (to whom? how do you get?)
911 emergency code (yes, the actual code, if the repeater owner OKs)
Links (callsigns of linked repeaters, or something like "CONDOR" for WANs)
Location (lattitude, longitude, HAAT)
Coverage area (best/design coverage)
Sponsoring Club

I haven't quite figured out what a good way to collect the data is, but I think callsign and output frequency are (when combined) a good unique key. Another sticky one is how to distribute the info. I don't have anon FTP access, but I suspect that if I collect the data, some system will make it available for FTP. We could also (with some trouble) create a rec.radio.amateur.maps group, to be run like comp.mail.maps.

Anyhow, this is all speculation, post (or e-mail, but it's better if everyone sees) your opinions / how to do this better.

Oddly enough, Al, I used to own fancy 2m HTs. Traded everything in for
a trio of nice simple Kenwood TH series HTs. Simple, no frills,
thumbwheel tuning and work like a charm.

Plus you can leave 'em out in subzero temperatures and the numbers don't
fall off the thumbwheel display.

If this is reposted, then consider an apology in advance.
The news system seems to have experienced a lobotomy. Let's
try it again...

<--- Original message devoured by our news node --->

Greetings. I've been watching things fly by on CW testing so here is
yet another opinion. If you don't agree with it, that's why it is an
opinion. ;^)

I am a Code-less tech (Yes, one of those) and have been involved in
electronics as far back as I care to remember. I am currently planning
on getting my Extra by just learning the code using the Farnsworth
method. I came to the conclusion that it was easier for me to learn the
sounds fast and then just working on speeding up interpreting the writing.
Currently, I send the characters at 23WPM and words at 11 WPM so I have
about 9-10 WPM to increase to be comfortable with with CW test. All it
takes is time.

Now to be honest, I do not plan to use CW. Not now, not ever. After
performing a brief survey of two extra and three advanced class ham
I know, their guessimation of current CW speed had high was 12WPM,
and the low was 0, with the average about 8WPM. Interesting enough for
inquiring minds. So I seems, IMHO that demonstraing the ability to
copy code at some speed seem to be a one-time-thing. I personally do
not have any problem with this (as I plan to do this for the experience ;^)).
However, (Here it comes) if we are serious about the demonstrating the
ability to copy code at a certain speed and we determine that it is
important enough to limit a person's priviledge based partially on this
test then we should take steps to insure this minimum level of competence.

So, (Here it is) why don't we *retest* when we renew our license? It seems
fair to demonstrate this skill that our priviledge if based upon. It
only happens once every 10 years so it shouldn't be a major bother.

I guess what I trying to point out that if code test is not important
enought to retest then the process seems very similar to pledging (ie. hazing)
in some college organizations. In college students gets the opportunity
to go througha semester/term of h*ll to become a member. Unless eating
goldfish (or worse) is a needed skill, then it becomes a one-time rite of
passage. Sort of like the 20WPM code test. :^)

I personally would not have a problem with this since I feel this is fair
(and the real-world has not squashed all of the idealism out of me).
I also do not think any other Ham would have a problem with retesting

if they use CW actively in our hobby. However, (I think I hear War Drums in distance...(gulp)) if our priviledge is partially based on the ability to send code then some provision should be made to ensure that this skill is maintained.

Or we could change the term for the examinee to "Extra Class Pledge 1992"

;^)

Ron N7TLC

Ps: I just *now* remembered that the callbook has my home address in it... YIPE!

(robert.f.casey) writes:
>
>>A1DS

This one won't exist.. unless the rules change. Since PREFIXES beginning with
A are not the domain of a sole country, 1x2 callsigns cannot exist, unless
the country does not require a number in the "body" of the call, as in the US
broadcast station callsigns... The US is allocated AA-AL, and Botswana is
allocated A2A-A2Z. Taking Boswana as an example (as there is no allocation on
A1A-A1Z ... a second good reason for no A1DS callsign BTW). All of these
A2 prefixed callsigns have a second number denoting the call area (or
it's Botwanese equivalent indicator) e.g. A22AA, A26TW etc etc..
but no A2DS .... ever... at least in the ham bands...

Now before anyone get their panties in a bunch, I will point out that
the countries sometimes fudge the rules, either for domestic convience, to
show they can really do what they want regardless of the ITU 'agreement', or
something to do with Elvis (the Elvis part is a joke)...

The recent XE21 operation from Mexico during the ARRL DX test (why didn't
they save it for the WPX test??) is just one such example of a callsign
fudge.. as 2-letter-2-number calls are usually for Space Service stations
(TNX The DX Bulletin - VP2ML-editor). It should be pointed out that this
callsign fudge would seem to be well within the domain of the coutries
jurisdiction, they are assigning calls from their block of prefixes, albiet
to a non-traditional service. For any country (at the present time!) to assign
A1DS, would be akin to the U.S.A. assigning a ham the call TT1TT....
Though the call has not been assigned... Chad (the country) might be a bit
peeved... as they are allocated TTA-TTZ. Though in the A1 case only the ITU
or it's member societies, countries would be all busted up.. more of a taking
control of some communal property rather than actual stealing....

Though for the ultimate in custom call signs, I am waiting for the
chance to go to Chagos Argentina (In argentina the call areas are allocated
by the first letter of the suffix, and Chagos is where they give G suffixes.)
Where I can vy for LU1GI .... heres to hoping...!! (it has not been assigned
but.. there is a US/Argentina reciprocal agreement stating that we merely
sign /LU**.. so maybe I will have to move there for a while...:-)

627. DC Connectors

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 21:32:45 UTC
From: MOSIER%UNCG.BITNET@ncsuvm.cc.ncsu.EDU
Message-ID: <7A314613F1DF2067AD@uncg.bitnet>
Source record: 291503

I'm running 12v DC into my house from a battery supply well away from the house. I need a wall-mountable connector system that can handle 20 amps (I'll put connectors on a panel and then wall-mount the panel). I got a MOLEX connector catalog and they have some 20-amp connectors that will panel mount, but I can't find a MOLEX distributor that handles small orders. Anyone know where I can get something? The connector pins have to be well protected to prevent accidental shorts (although I have 30A fuses on both + and - lines at my 400 A-Hr supply).

Regarding the IC-22S,

I have just put an IC-22S into our UHF repeater as a remote base using the RC850 controller. There are some external circuits that are needed to make it work. I basically used the serial to parallel shift registers as described in the ACC manuals, an E-prom to convert from BCD to the Icom code, and a level converter (2804) to level shift to the 9V ICOM. I can supply a copy of the schematic, if required. The unit works great on the standard repeater pairs in the 146 to 148 band.

I am flattered! Though I was quite afraid/concerned when my call
came up in the subject line list.. (I did have a little nudging match
with GB8FX on 14.180 during the test.. no swearing, I was just a bit bsque)

My home address is:

50 Woodland Road
Holden, MA 01520-2596
USA

No need for an SASE (though a address label would be great!)
I have already gone through my blank-call cards.. and am
waiting for my printed cards... I plan on dedicating the
second half of May to answering all QSLs.. (I am in the rush to graduate
phase... so please bear with me!) Of course if you need it immediately...
I could do a handwritten QSL... In the future I am thinking about
maybee doing a special event station for new years... with a special card..
thoughts???

634. RS 10 Meter Rig is GREAT!

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-30 23:03:40 UTC
From: 5rtrtrt@cbnewsf.cb.att.com
Message-ID: <1992Mar30.230340.23479@cbfsb.cb.att.com>
Source record: 291511

Well, after all the Radio Shack bashing last month I still decided to pick up one of the 10 meter rigs when I found a mint condx one in a hamfest for $150. (Sale price at the store was $199). What a rig! We ran it last weekend with a 40 " base loaded mag mount (CB type antenna) and worked nearly every station we called (KC2MF and me), Europe, the Southwestern states, even a pair of JA stations. What a blast!
I think I am going to build a 6 meter transverter for it next. It should make a great combination.
Question: I have built lots of 6 m. stuff in the past (converters, mixers) but for this rig I would like an all solid state transverter. I am thinking of using a power amplifier module that can be linearized. Has anyone had an experience with modules made by Mitsubishi and/or Hitachi? Someone told me about them but I don't have the details. He said they are made for finals in commercial rigs but use FETS that can be biased for linear operation.
Any info would be appreciated. Thanks.

I need to know about the principle of infinite impedance
detection. How does it work on the basis of an equivalent
shematic diagram?

Please recommend me some reference books if the principle is
too complicated to illustrate here on this network.

The detector of this type is adopted in the STAX electrostatic
cartridge system for reproducing LP records. The original model
uses tubes but I would like to remake it with transistors.

Thanks in advance.

Now, I never said that ANSI was a regulatory agency. What do you think
a court would say if (and of course, it is highly unlikely I think..)
someone was injured in some manner and claimed that the manufacturer
should have been aware of, and therefore culpable...

That's the way that liability works. Why would ANSI publish these standards
if no one uses or refers to them?

Anyways, I'm sure the extra watt is k00l

:) Peace folkz

642. BULLETIN: New Solar Services Available through FTP

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-31 01:14:28 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.702004468@honte>
Source record: 291519
Cross-posted to: sci.astro,rec.radio.amateur.misc,rec.radio.shortwave

/\

SOLAR BULLETIN

31 March, 1992

SEVERAL NEW SERVICES AVAILABLE THROUGH FTP

/\

NEW SERVICES ARE NOW AVAILABLE THROUGH ANONYMOUS FTP

The anonymous ftp site at: xi.uleth.ca (IP number 142.66.3.29) is now providing daily solar scans using data from the 10.7 cm solar interferometer at the Algonquin Radio Observatory near Ottawa. These scans are provided in the standard GIF image format and include a complete Solar Region and Coronal Hole Map of the sun.

The data from which these daily solar scans are generated are provided courtesy of the National Research Council Dominion Astrophysical Radio Observatory (NRC/DRAO) in Penticton, British Colombia (Canada) - the home of the daily 10.7 cm solar radio flux.

These daily interferometer plots will be made available for as long as the ARO interferometer remains operational. The daily imbedded Solar Region and Coronal Hole Maps will be included whether or not the 10.7 cm interferometer data is available. These solar scans are available in the directory: "pub/solar/Scans".

This anonymous FTP site is also providing selected daily solar GIF images of the Sun (ex. Hydrogen Alpha, Helium 10830A, Full-Disk Solar Magnetograms, White-Light, etc) in the directory "pub/solar/Images". The data for these images are provided by professional solar observatories in conjunction with the United States Air Force and the Space Environment Laboratories. Consult the file "00-index.txt" in this directory for credits to the respective observatories and organizations contributing to this service.

The directory "pub/solar/Xrays" contains daily x-ray plots (based on 2-minute averaged data) in the 1 - 8 Angstrom band. These plots cover the most active 21-hour periods of each UT day. Special high-resolution x-ray plots of full-disk x-ray observations of major solar flares or other unusual x-ray events will also be made available using 1-minute averaged x-ray data as observed by the GOES-6 and GOES-7 spacecraft.

The directory "pub/solar/Aurora" contains several subdirectories which contain auroral-activity information, forecasts, and current conditions.

These aurora-related services are not yet fully functional and will only be updated when conditions warrant. However, the directory "pub/solar/Aurora/current" contains a file ("current.obs") which is now being updated hourly with current observations of auroral activity obtained from a network of over 2,000 stations throughout North America. At the present time, this is the only 'regularly-updated' auroral service being provided. Other dedicated services (ex. updated forecast maps of auroral activity, maps of current activity, etc) will be implemented in the near-future.

** End of Bulletin **

643. compression on packet....info

>they used to have you send the exams to them by regular mail, they now
>make available overnight express numbers for all the major delivery
>companies available to their VE's to get the stuff back overnight. I

That _is_ good news, and I hope that all the ARRL VEs are using it. I am a VE for Sunnyvale VEC (although I do not speak for them) and Gordon has been fedexing his stuff to the FCC for several years. A recent comparison of two new technicians on the same day at Sunnyvale and ARRL sessions here in the bay area (I got this on packet from a person known to me) was six weeks for the Sunnyvale form and eight for the ARRL form. To be fair, it should be noted that the Sunnyvale form was fedexed to the FCC on the monday following the Saturday tests. I don't know where and how the League form went.

One of the big problems we face with new hams is that loooong wait for the ticket.

Another is that with the current system and the self study materials available, a person can study and get his license and never lay eyes on another ham, other than the VE team. If he then buys an HT from R/S, his first contact with other hams is going to be ON THE AIR.

We need to reach these people before they get on the air and welcome them to clubs and resources, and the VE session may, in many cases, be the only place to do so. Comments?

Message-ID: <9203310522.AA01765@kaerigw.kaeri.re.kr>
Source record: 291378

Hi, In HL, All amateur radio is classified by 1st class, 2nd , 3rd.
and 3rd class is divided by code or no-code again.
The differences between classes are output power and band availability.
1st class: 500W,All band
2nd class: 100W or below, all band
3rd class(code) : 50W or below, 21MHz or above + 8MHz or below
3rd class(no-code) : same as above except CW mode

What classes is in US?

With the competition to work STS-45 in Washington, D.C., you really need some power to ensure you will work the shuttle. If you were out in the middle of nowhere, an HT on high power will do just fine.

It's not like MIR, which you can work any week you desire...

654. The Venerable Kenwood TS-520, help!

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-31 06:27:03 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9203302226.aa12508@Paris.ics.uci.edu>
Source record: 291381

I just got a Kenwood TS-520 (the real one without the "s" and including the DC module) as a "fixer upper". I have some experience with the 12BY7A, 6146 PA section radios, having had a TS-520 and an FT-101 before. I am experiencing some rather weird problems that I could use some hints with......

The radio tunes up fine. The output is a little low, but no big deal. The tubes are good. The dummy load is 50 ohms.

If I transmit for some couple of minutes, and calmly receive, at some random moment there will appear a blue flash from the final cage and the transmitter will not work anymore. The bias still looks OK but the plate current goes off scale when I hit the SSB xmit button on the mike, and the plate voltage goes way down (a real drain.)

When I check the circuits, I find a pair of charred cathode resistors (10 ohm, 1 watt resistors from cathode to ground). I replace them. I can then repeat the whole above process!

The former owner said that the problems started when he replaced tubes and attempted to re neutralize the finals.

I suspect a wild parasitic oscillation going on, or maybe an intermittent bias voltage. Does anyone have experience with the 520 like this? Does anyone have any other suggestions?

Thanks,

Source record: 291384

In article <g2stdtq@rpi.edu> giasij@aix.rpi.edu (J L Luigi Giasi) writes:

This one won't exist.. unless the rules change. Since PREFIXES beginning with
A are not the domain of a sole country, 1x2 callsigns cannot exist, unless
the country does not require a number in the "body" of the call, as in the US
broadcast station callsigns... The US is allocated AA-AL, and Botswana is
allocated A2A-A2Z. Taking Boswana as an example (as there is no allocation on
A1A-A1Z ... a second good reason for no A1DS callsign BTW). All of these
A2 prefixed callsigns have a second number denoting the call area (or
it's Botwanese equivalent indicator) e.g. A22AA, A26TW etc etc..
but no A2DS .... ever... at least in the ham bands...

A2 is a suffix reserved for Botswana. OH is a suffix reserved for Finland.

OHDS is a Finnish ship. So A2DS would be a Botswana ship, wouldn't it?

>
> A system like this, if it could correlate down to about 1usec ...

i've seen both electro-magnetic direction finding and t.o.a techniques
applied to locating cloud to ground lightning strikes.

the electro-magnetic technique is a much simpler, easier to use
system, requires only a small number of sensors to cover a relatively
large area (minimum 2, better with 3), the software that calculates
the positions uses simple trigonometry.

the t.o.a. system, on the other hand, uses a great many sensors, (the
more the better), requires precise (sub microsecond) timing, and although
i have not seen the software, i imagine it is probably a programmer's
nightmare.

the magnetic system, on the other hand, requires some very sophistocated
sensor hardware, orthogonal loop antennas and related discrimination
circuitry (expensive). from what i understand about the t.o.a. system
is that it uses simple whip antennas, limited discrimination, but still
has some very expensive clocks.

if you want to know more about these systems, email. questions i can't
answer, i can put you in touch with those who can.

There is something dreadfully WRONG with this. It is so wrong, I can not beleive that it would be true. In effect, this would almost prevent, for example, a general from having a CW QSO with a novice. Many higher graded amateura have been very happy to slow down to my 5wpm for an enjoyable, if slow to them, QSO.

This sounds so wrong, that I need to know: What is the soruce of your information.

>will have a harder time understanding electronics because a lot of it
>will be in black boxes (i.e. IC's). And that there is no longer a cost
>advantage in buliding a kit, now.

#include <nostalgia.h>

I saw that too. How sad.

There is now no easy avenue for kids to get their feet wet in electronics; no way for them to discover the aesthetic pleasure held waiting in solder flux and circuit-board foils. No way for them to develop the motor skill, deductive insight, and patience they need to succeed at kit building and hardware debugging. No way for them to point proudly to a gadget and say, "I built that."

The really motivated kids can still accumulate parts through catalogs and fests, and can find books of plans. But they have to have MUCH more motivation (and skill) to work that way. Those with motivated parents will have a head start, but parents have less time these days to do such things.

I just hope that some other company will realize that Heath has left a vacuum in the market, and will take their place. The Shack is probably about the closest to being able to do this, but they're none _too_ close.

It's just another step in the de-evolution of a culture in which everyone consumes, but no one produces.

- Steve (masticol@cs.rutgers.edu).

P.S. I frankly don't believe that there's any less excitement in building kits that use ICs. The understanding is still there, and it's really no more complicated. Just on a different level. -S.

We have been constantly following both MIR and the space shuttle lately
and only today heard the shuttle... they were engulfed in QRM though...

We got a big suprise from MIR yesterday.. they passed very close to here
(elevation of 50 degrees) and we all of a sudden heard U8MIR calling
a K8 station... He acknowledged our signal but didn't say very much.
What is their english like? We were thinking of inviting down a couple
of Russian professors on campus on a future pass...

MIR was incredibly clear -- last time we worked them (From the old
crew) they were running simplex and were quite noisy.. Now they had
a clean signal! (I'm still shaking) Did they get a new radio? They
are running duplex now...

My son passed his Novice 3 months ago.. then studied real hard and upgraded to Tech plus and passed the 20 wpm code. He has a lot easier time with the 20 wpm code (got the highest score in the session [90]) than he did with the written.

He is KD4HQV/KT and works almost all cw.. a little packet also.

He is now studying to take the General written at the next testing session (June).

A multisite tdoa location system has been done! Unfortunately, much of the
information about it is classified. It was, however, only reliable on pulsed
emmissions, and required corrected cesium beam clocks to achieve sufficient
accuracy. BTW the location accuracy was much better than the quarter mile
which you mentioned, but how accurate is one of the classified items.

The system used very accurately located and navigated airbourn receivers, so
something using fixed sites and accepting lesser location accuracy would be
much easier to do, but would, I think, still only work well with pulse
transmissions.

Sure is an interesting idea, though!

I agree. I am (almost) one of the self study persons you refer to. 2 years ago I decided that I would like to pursue ham radio. After a few phone calls to try to find out who to talk to, I gave up. It didn't seem like there was much interest among hams.

Well, the no-code tech license came out. A friend that had recently got the no-code tech seemed like he was having fun. So, I decided to pursue things again, and went to Radio Shack to get the book with the FCC question pool. I also have my eye on the Reali$tic HT. I have not yet been to a club or seen any hams, except for a few phone calls to some local ham clubs. This time I have found a ham or two that seems glad to hear from me. I plan to attend a club meeting next week.

My point is that it is easy for a new ham to get on the air without ever having seen another ham. It took me some detective work to find another ham when I decided to pursue ham radio. But, it is easy to find self study material at Radio $hack and to pick up a copy of 73 at a local magazine shop. As a result you have a lot of independent hams. Independent hams will have fun, but not get as involved in things like public service (comms for parades, disasters, etc.), or helping to make more converts. Yes, ham clubs need to be more active in seeking out the new ham, not just waiting for that person to show up at a club meeting. Maybe distributing a list of clubs to new hams at a VE exam, or asking that person if he/she wants their name sent to a local club. I think clubs are the key to keep the amateur radio service from dying out.

Just some ramblings from a ham to be (gotta pass that exam on Saturday).

The A1 prefix has been used by Abu Ail, for example, A15AA and A15AW in March, 1990. It's most likely an unofficial prefix, and I don't know if A1xy could be assigned to the same country.

>the spirit of amateur radio!

I know this is none of my business, but, I can't resist. In case this comes across wrong, this is an attempt to pour oil on the water, and NOT light it:

Lee, Steve's reply to your survey does come across as a tad harsh, but it is easily out done by the harshness of YOUR posting. He is, of course, entitled to his opinions (and to share them or not with whomever he chooses). Also, remember that sarcasm and other tones don't survive well in the typed media. It is POSSIBLE that it was a joke or even a valid question in his mind. His reply to you was via e-mail. Regardless of how much it may have ticked you off was it in "the spirit of amateur radio" as you said, to publically call him a disgrace? I support your efforts (illustrated by the fact that I sent you my $.01 cent worth (only $.01 until I get my ticket)). Having stated that you would summarize the results, his reply should be part of that - no more, no less, than any other replies recieved.

Steve, *YOU* are part of one of the most valuable resourses pools in the world. I, personally, would value and respect your opinion along with that of every ham or non-ham with enough interest in the craft to be reading this newsgroup. I am a non-ham (at least until next Tuesday (then THE BIG WAIT)). Would it really be inappropriate for me to have solicited opinions like he did? As for your comment that "If you had a call sign, you'd show it." after I get mine, you bet your BUNS I'll show mine.

Donning my environmentally-safe-replacement-for-asbestos long johns, I decend from my soapbox.

Source record: 291399

I just passed the Extra exam last weekend and as I had passed the 20 wpm code test when I got my Advanced 2 weeks ago, an Extra I am! When I got my Novice a year ago the Extra seemed almost impossible for me to get. What I did find out that if you have a least one CW QSO a day and work with a computer code program it becomes easy to get up to 20 wpm. I flunked the 13 wpm code test the first time I took it (talk about discouraging!) before I started having CW QSO's. After I started doing that I passed the 13 wpm with no problems. I just continued on with doing CW QSO's and that enabled me to get up to 20 wpm. I am living proof that you don't have to be to bright or talented at CW to get your Extra. 8-) I am just as exicted at getting my Extra as when I got my Novice!

OK, sorry for all the confusion. I do not have FTP access and relied on a volunteer to make it available. That is the information that I passed on.

I am posting it today to alt.sources. If someone can take it and make it available at a more reliable site then please post something telling people where to get it.

I cannot justify using the company's money to email it everyone. I will offer again to supply it via snail mail. Send SASE media to:

Johnathan Vail, 107 Oak Ridge Drive, Ayer, MA, 01432

Where media is PC floppy (1.2 meg 5.25 or 1.4/720k 3.5), or tar tape (QUIC, 9 track, 8mm), or $25 and I supply the media and postage.

To reiterate, this is an older version of ORBIT (23?) hacked to use the CIA world map under Sunview. It was hacked by Eric Roskos and was written to be portable. I helped with alpha testing but haven't used it lately.

Thanks and sorry for the trouble.

Prices vary, mostly downward. I've seen 465s at hamfests for $200, and
I've seen them for $500, I paid $300 at Dayton to a guy with a U Haul
truck load of them. Nice old scope, but I recently sold it, for $300,
because I fell into a deal on a 2445A for $700, with probes. Four
channels, rated to 200 MHz, measured usable to 600 MHz, storable setups,
on screen displays, etc. Wheeee!

I'd like to second the request for info on the 22S. I understand that
there is a club in southern california which has done all sorts of
things to the 22S.

I'm in need of a schematic for the unit. I've got the user's manual,
complete with block diagram but alas, no schematic!

By the way, the unit does not work on all the "standard" repeater pairs
here in Arizona (we're on 20khz channels and the Icom is on 15)

From what colleges or universities have you received degrees? I'd like to urge their boards of trustees to institute renewal and retesting requirements for those degrees. ;-}

B.T.W. It is encouraging to hear of your effort in learning code. If you get involved in the right activities, you might change your mind about learning it only to not use it. The activities which really hooked me on code were VHF/UHF/uWave DXing and contesting. It's still a thrill to see just how far you can push the path. I do have an Extra-class license, but I was involved in those activities before I earned my Extra.

This Spring, an Amateur Radio interest group will be forming,
serving PSU and Reed College. License classes will be taught,
license examinations will be given, and several ham radio
stations will be installed and made available to licensed
operators.

Amateur Radio has a wide variety of areas and things you can
get into - from television to radio/computer networking and
packet transmission - Ham radio has it all. If you'd like more
information, or if you're interested in getting involved,
send email to glen@janus.cs.pdx.edu and we'll notify you when
an organizational meeting is planned.

Here is a circuit I got from a Weatherwise magazine, a few
years ago. I think the article was 'Direct Satelite
Readout' by D. Lehrai and M. L. Lightfoot in Weatherwise
38:159-61 Je 1985

Or else it was 'Using a Home Computer as a FAX by J. A.
Ryan, 36:308-10 D 1983.

Or else it was 'Apple FAX: Weather Maps on a Video Screen'
by K. H. Sueter from Byte magazine 9:146-8 Je 1984.

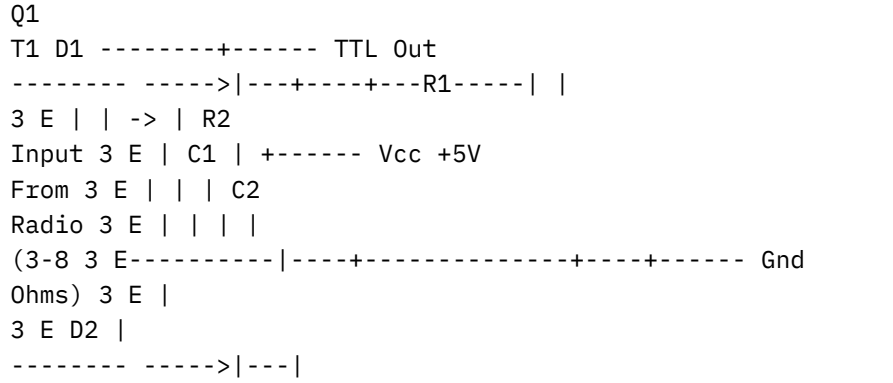
I looked all of these up at one time and the paper here
that I sketched the circuit from the magazine on has all
three articles noted. I hope I'm giving credit where
credit is due. I'm a little disorganized. :-)

Anyway this article said how to hook this thing up to an
Apple II game port and gave some code to display the WEFAX
output on the screen.
I guess this circuit (I'm no electronics whiz) listens to
the output from the radio and toggles the transistor.
Then the program took the input and put white or black dot
on the screen in a scanning fashion to make a picture.
I built this thing and it did work, but I dropped it or

stepped on it or something and it quit working.
The thing with this circuit is it doesn't pay any attention
to the sync signal, so the program had some timing loops
and sometimes the screen had a big black line down the
middle with two halves of the picture on either side.
By listing to the radio I could tell when to start the
picture scanning to get it to look OK.
If anyone has any ideas of how to get the sync signal,
tell me.

Now to connect this to an IBM machine I'm not too sure. I
guess you could put -12 volts on the ground and +12 to Vcc
(does this make sense or will the whole thing blow up?)
and send the input to a signal line on your serial port,
like on the RING line or the DSR or whatever. I'm not
too sure. Does the RS-232 port have + and -12 volt lines?
I guess you could power it from that if it did.
Or else if the paralell port uses TTL and has a +5V and
a ground you could run it from and to that?
Or you could put this all on a card and plug it right in
a slot?

So anyway here is the circuit from the magazine. I guess you
can get all the parts from Radio Shack.
If any one can think of a simple way to hook this up to
an IBM type machine I would be interested to know how.
Let me know how this works for you if you use it.



T1 2000 Ohm center tapped / 3.2 Ohm transformer
D1, D2 IN34 diode
C1, C2 0.1 micro-Farad capacitor
R1 22k Ohm resistor
R2 470 Ohm resistor
Q1 2N3904 transistor

Dave Adamczyk u36588@uicvm.uic.edu

Happy Computing! :-)

Bill,

I have an extra manual for the Motorola HT-600 kicking around the office,
if you would like.

I'll be in the office Thursday (716-475-2853) if you want to call or E-ma
il me.
Mike, WA2BRX

I need to run a *LONG* RF ground and my wife somehow doesn't think counterpoises thrown around the room meet certain aesthetic standards. I've heard more than one person say: run coax with center conductor connected to shield at the ground rod and center conductor connected to the rig chassis ground and bypassed to shield with an .01 or .001 cap at the other end. I'm not sure how to analyze this. Anyone have any insights? I'm sceptical, but thought I should look into it before I build a ground tuner.

Sounds like bad tubes. After checking all components in the PA, I think I'd
be inclined to replace those finals and run through the neutralization.
(Unless, of course, you never checked the neutralization to start with).

Short of a large structure, like a counterpoise, there's really no way
to get a low impedance ground more than a fraction of a wavelength
from a good earth ground. A tuned ground might reduce RF in the shack,
but the ground system will still radiate, wasting power and possibly
causing unnecessary RFI. The best approach is to use balanced antennas,
so little current flows in the ground system.

697. Hi, I'm new here.

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-31 20:12:56 UTC
From: allard@isi.edu
Message-ID: <21053@venera.isi.edu>
Source record: 291423

I have long been an AM radio junkie. For example, I like to tune in distant AM stations while driving across California at night. (I guess that is a form of what hams call DXing.) Anyway, for various reasons, I am now getting interested in ham radio. I do NOT yet own any SW receiver or transmitter. I do have a book called "Tune in The World", and a Morse code practice program for my PC. One of my goals is to have at least a novice license by the time I join a friend of mine on a sailing journey next year across the Pacific.

I have the following INTERESTS and GOALS:

Listening and (eventually) contacting as many places in the world as possible. I speak both English and French.

Networking my computers and participating in radio based networks. Helping increase the bandwidth and throughput of such networks and interfacing radio and groundbased networks. I would like to provide a minor node in such a network.

Capturing satellite transmissions of weather maps. I just want to do this for fun, so that I can see clouds from outer space. I know about and already own an AEA-FAX unit.

Eventually I would like to have a hand held or permanent unit in my car so that I can get on the air while driving around town or across country.

My RESOURCES are as follows:

I do NOT yet own any SW receiver or transmitter.

I live very near (1 Km from) the Pacific Coast in the Los Angeles basin in a two story flat roofed apartment building. I believe I will be able to put a long horizontal antenna on the roof or along a NorthWest facing wall. Less clear if I'll be able to install a vertical one.

I have a 386 33Mhz PC and will be acquiring other less powerful systems to build a LAN and invesitgate PC based processer servers (via TCP/IP, RPC, and other not yet invented protocols.)

I have the following QUESTIONS:

What's the basic difference between rec.radio.amateur.misc and rec.radio.shortwave?

What low priced (< $200 ?) receiver should I get for now just to listen to the various bands? It should be SSB capable in order to

tune in satellite data transmissions for the AEA-FAX?

Should I go ahead now and buy a more expensive unit, including a transmitter, before I know more about SW and ham and have a license? (In other words, should I bother buying a less expensive receiver now, if I'm going to want a transceiver (~ $1000) within the next year anyway?

Is good USED stuff available (e.g. via rec.radio.swap) or should I not bother trying to find used stuff until I know more what I am doing?

What is the best cheapest low tech antenna for my purposes?

Rumor has it that the Teletrac AVM system works something like this and it's resolution appears to be within a city block. It operates on 904 MHz and may use digital modulation (the base does but I haven't hear a mobile yet). The possibility exists for simply putting a zero-crossing detector on the discriminator and deriving the delay information from any audio. This method should be easier to implement on the links from remote receiver sites. It been on my list of things-to-try for some time but it's still under other stuff in my toy box. :-)

[Details from reading through the 1976 edition of QST at 2am Monday morning]

[No, I don't have a copy of part '97 prior to 1991. I have a collection of
QST from 1959->1967 [less '63 -- instead I have CQ for that year] and 1976]

[Disclaimers added to fend off comments from the Malcontent]

Prior to some time in 1976, if you weren't on the air regularly, you
would have to pay a fee and get re-tested. This may have been around
license renewal time -- licenses back then were good for five years.

They dropped the re-testing in '76 because "the ability to copy morse
code does not indicate the competence of an amateur radio operator".
Note that this is the same language used in the report and order that
created the no-code tech ticket.

>I guess what I trying to point out that if code test is not important

Not important! Why it is there to [a] fill the ITU requirement that
all amateur radio operators must know morse code and [b] as a test so
you can prove that you have the strength to become a ham. Why I
remember back on Field Day in '36 a lightning storm came by and blew
out all of our new-fangled tube transmitters and recievers. Half of us
went rock-hunting to find some Galena so's we could make a crystal and
the other half had to build a condensor out of a coffee can and an
oscillation transformer out of half of our antenna wire and the spare
wheel off of Jed's old Model A! You could hear that ol' spark-gap
transmitter for 12 miles! Those were the days of Radio!

Once upon a time, whenever you renewed you had to certify that you were still capable of receving The Code at the speed required for your class of license. And I believe the FCC could, in its discretion, call your bluff on it (i.e., retest you) although it was rarely, if ever done.

I think it should be crystal clear by now from everything that the FCC has said and done over the past few years that it just doesn't consider the code to be at all important anymore. Consider the creation of the codeless license and their refusal to make a formal license distinction between "codeless" and "regular" Techs, the dropping of the sending test, simplification of the receiving tests, etc.

The FCC goes through the motions of requring a code test for HF licenses only because of the ITU language and the fact that so many hams would go nonlinear if the requirement were dropped altogether. But I think things are definitely headed in that direction. Sooner or later, the ITU requirement will be dropped, and I expect that code tests for all amateur licenses will finally become a thing of the past.

|>
|> How can NORAD track space objects? I would think the S/N for radar needs
|> to be greater than CW.
|>
|>

For one thing, the radars which feed data to NORAD (e.g. NAVSPASUR, BMEWS, ALTAIR, Millstone Hill, etc.) have effective radiated powers which are truly enormous. For example, the Millstone Hill radar in Massachusetts has a peak transmitter output of something like 2 to 5 megawatts. The paraboloidal antenna is about 90 feet in diameter, and the operating frequency is 1,296 MHz (I'm not kidding). Assuming a 50% aperture efficiency (I'm sure it's actually better), we get a peak ERP of 139 to 347 gigawatts. If you read to the end of this posting, I'll tell you an amusing story about this radar.

Another point in favor of the radars is that they can integrate the returned signal over more than one pulse. In essence, this is like slowing your wpm rate for Morse code. However, the pulse repetition rates of almost all radars are still faster than the "dit" rate of even high-speed Morse.

It actually is a problem to detect high-altitutde (order of 10,000 kilometer) low-radar-cross-section targets by radar. In fact, the Air Force put into operation in the 1980s a system called GEODSS (Ground-based Electro-Optical Deep-Space Surveillance --- if I remember). At several locations around the world are groups of telescopes coupled to imaging sensors. These automatically scan the sky (weather permitting) and look for "stars" which move. For the detection of small, high-altitude objects, GEODSS beats the radars. Also, the angular accuracy of GEODSS is better.

Now for the amusing story. I am a staff member at the MIT Lincoln Laboratory, which, among other things, operates the Millstone Hill radar. I've encountered the signal from that radar a few times. I've heard it on the 1,296 station at W1XM in Cambridge, MA. Last summer, I was working with a mobile, L-band (~ 1,200 MHz) radar on Wachusett Mtn. in Princeton, MA --- we had to interleave our opertaing schedules with Millstone. The amusing part happened around 1986. I was on a project which was developing a high-performance radar to be carried by RPVs (small, remotely-controlled airplanes). The system contained a custom-built, data-stream array processor. We were conducting tests around eastern Massachusetts with the RPV being captively carried by a

manned airplane. The data processor would crash every now and then. This was annoying us until we realized that most of the crashes happened when we were passing by Millstone Hill. I dashed for a telephone and asked the Millstone operators to check their logs. Sure enough, the big radar had been blasting our processor. The airplane pilots started giving Millstone Hill a wider berth, not to mention wearing silver-plated shorts. :-)

705. VHF Marine Regulations

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-31 21:26:01 UTC
From: venable@faculty.coe.wvu.wvnet.edu
Message-ID: <venable.6@faculty.coe.wvu.wvnet.edu>
Source record: 291331

To incompletely summarize VHF Marine regulations:

1. A STATION LICENSE IS REQUIRED in order to operate from a boat.
2. Recreational boats are not required to have licenses, unless they plan to operate radios. Many commercial craft are required to be equiped with VHF, and so are required to be licensed.
3. NO OPERATOR LICENSE is required.
4. Shore station licenses are generally not available for non-comercial operation, and land operation is generally illegal.

As in the Amateur Service, anyone can use any means of communications in an emergengy.

A continuing discussion of VHF Marine radio can be found on rec.boats

This is a shot in the dark, but.....

Several years ago (my best guess is at least 10, maybe more) a couple of guys wrote about their experience launching a model rocket with an operating VHF Engineering 2m transmitter strapped to it and published their article in one of the ham magazines (I believe 73).

I want to locate the article. I have put some effort into an unsuccessful search for it. I am posting on the outside chance that someone (one of the authors, maybe?) is on the net and for some reason remembers where this piece is an point me to it.

Thanks for any help.

No, the RS 10 m rig does not do FM. Only SSB and CW.

I don't know about the coax idea, but you might try suggesting that you'll buy
a really nice carpet for the room if you can hide the counterpoise underneath.

710. Two-Line Orbital Element Set: Space Shuttle

Newsgroup: rec.radio.amateur.misc
Date: 1992-03-31 23:20:03 UTC
From: tkelso@galaxy.afit.af.mil
Message-ID: <1992Mar31.232003.21712@afit.af.mil>
Source record: 291337

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly), shuttle elements, and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

(Rummage, rummage, rummage... Ah! a good sturdy soapbox.)

Interesting...

I'm working on my MSEE currently and I would *LOVE* an opportunity to
improve my undergrad GPA. (A little too much fun during certain semesters.)
;^)

However, I see your point. The only technical class that I have taken that I
would not score better now would be E&M. After 5 years in the work place
I am *much* better at digital-analog hardware, math, plus I now am especially
familar with software. Basically, (IMHO) a BSEE program would be a cake-walk.
Except, for Electricity and Magnetism. Hmmm, I wonder why that is? Could it
be that I have limited or no interest in E&M? Could it be that I *never* use
it on a day to day basis, and to the best of my memory, I have never used it

after the class (with the exception of a few coffee table dicussions).

And to me, that sounds just like how I feel about code and CW. ;^)

As a student, several of us questioned the adminstration and professors why a EE student should take Statics and Dynamics classes. The administration said that it was to "develop a well rounded education". The professors just called them "filter" classes. On no uncertain terms the professors said that freshman and sophmore years exist to weed out the students who are weak in math or lack the discipline to study. Unfortunately, this develops good students and not necessary good engineers. But as long as the tutition get paid and students pass, and creditation continues.... ;^)

Being honest, I admit that I joined "the engineering fraternity". I also admit that a fair amount of what I learned probably was not relavent to the "real-world". But (IMHO) that is the difference between education and skills. It is possible to be well educated and have limited skills, and also to be very skilled with little education. I'm sure we can all think of a few examples.

Now speaking of skills...

IMHO, I consider Morse code a skill. I will not agrue whether this is a useful skill. But I consider it a skill. If a person wants to develop this skill, then by all mean do so, *because* they have an interest in it. At the same time I another individual (like me), does not see this as a useful skill and decides not to learn it. That's fine also.

This simple and happy co-existance is now threatened by rules and regulations. Somewhere along this path, someone came up with the idea of tiered privledges for amateur based on technical ability and morse code speed. A previous netter posted that there was no mention of code speed in the international regs other then the ability to communicate by morse code. Kinda seems like 5 WPM would meet that criteria.

;^)

Anyway, one more point in defense of retesting (remember the initial subject before the entry of the soapbox?) is the ham radio license is just that, a *license* to operate a amateur redio with said privledges determined by class. Just like a license to sell alcohol to the public, drive a car, or own a business. What all of these license have in common is that they all expire. All of these license require you to apply for renewal, and at the option of the granting agency to retest if applicable. A friend of mine moved to Oregon from the Mid West and when he applied for his drivers license they required him to pass both the written *and* driving test. This was the option of the reviewer at our local DVM. He passed without any problems.

I wonder what percentage of Hams could pass their code test right now?
:-/

Well, I'm off to double check and make positive my degree doesn't have and expiration on it. Now that I think about it, Boy, I wish I could erase that 'C' I got in EE362.

;^)

Anyway, on a CW positive note, last night I sucessfully received 12 WPM at a character rate of 23 WPM at > 95% accuracy. 20 WPM here I come.

>which are truly enormous. For example, the Millstone Hill radar in
>Massachusetts has a peak transmitter output of something like 2 to 5
>megawatts. The paraboloidal antenna is about 90 feet in diameter, and
>the operating frequency is 1,296 MHz (I'm not kidding).
^^^^^

Actually, I think it's 1295 Mhz. But with a signal that's probably several megahertz wide, who cares? :-)

The Millstone site is actually reserved for the tracking of "deep space" objects, defined as having orbital periods of 225 minutes or more. You don't need the capabilities of Millstone to track stuff in lower orbits, and in fact the narrow antenna beam is a real hindrance when tracking fast-moving stuff.

The Millstone site has been of real help to AMSAT for each of its Phase III launches. I remember one evening shortly after the launch of Oscar-10 (summer 1983) when I had the pleasure of visiting the site and watching as they tracked each of the objects associated with our launch. One CRT showed the radar cross-section as a function of time (ie., return signal strength normalized for distance) and another showed a FFT (fast fourier transform) of this same information. By looking at the power spectrum of the return signal you can determine the spin rate of the object. Given the information they had describing the various shapes and materials used, it was relatively easy to tell which object was which given their spin rate signatures.

One of my biggest thrills in ham radio came a little later. When we fired the kick motor on AO-10, a wiring error caused the rocket to burn longer than planned. Nobody knew what orbit it was in. Millstone couldn't find it because searching for an object that small and far away with an antenna pattern that narrow would have been searching for a needle in a haystack. (The kick motor firing was done below Millstone's horizon so they couldn't watch it in real time).

Several AMSAT command stations in exotic locations like New Zealand, Australia, South Africa, Minnesota and Maryland gathered segments of noisy ranging data (the ranging signal was narrowband) and fed them to me via Telemail. I crunched them on a VAX-11/780 at Bell Labs with an orbit determination program that I had spent most of my spare time during the previous winter writing. I took the elements it produced and gave them to Millstone Hill. On the next pass they found it right away -- within 3 km of the position predicted by my element set. I

think I even saw my elements show up the "official" NASA element sets
until they started producing their own again.

Phil

For a period of time, not sure how long, we had the option of
choosing our callsign. I picked out 10 that I wanted and lucked out
in getting my initials. I understand that new hams can no longer choose
their own. I guess the high number of new hams has made it impossible
to do this.

720. Monthly Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-01 04:02:05 UTC
From: pschleck@odin.unomaha.edu
Message-ID: <1992Apr1.041847.18785@news.unomaha.edu>
Source record: 291347

Archive-name: elmers_admin
Last-modified: 31 Dec 91
Changes: Added Rosalie White's E-mail address

This administrivia file and the companion Monthly Usenet Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "hams" have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing include:

the acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initals of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Knowledgable individuals from the ARRL, and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Edwin Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur

Satellite Corporation) including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques) have certainly "advanced the state of the communications art," one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise.

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite%arrlhq.uucp@uhasun.hartford.edu.

The latest version of the list can be found in the companion posting to this message, "Monthly Usenet Elmers Resource Directory." If you sent me mail and are not on it, please resend as it may have been lost on the way or once it reached my host.

(Note to readers of Info-Hams Digest: Because of its size, the companion list is not (yet) sent via the mailing list. The latest copy can be obtained via anonymous FTP or FTP mail server from ftp.cs.buffalo.edu under file ~/pub/ham-radio/elmers_list.)

Currently, the list is over 40 Elmers strong, has been featured in informational postings in the comp.archives and news.lists newsgroups, and has become an invaluable resource for many, as well as an opportunity for the volunteers to share their knowledge. Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

I can provide advice & assistance to any hams (or prospective hams) who
might be interested in things like reciprocal licenses, the differences
between European and USA Bandplans/operating practices etc.

Similarly, where to go in Britain to take ham tests, how to get
information on joining RSGB or local radio clubs, details of
hamfests/swapmeets etc. over this side of the pond...

Also advice on old tube-type radios (from the 1940s to the 1960s) and
'low budget' radio - converting commercial VHF 2-way dispatcher radios
to work on packet etc.

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-you-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

722. Radio Shack HTX-202 Mod is HERE!

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-01 04:44:02 UTC
From: 0004788818@mcimail.com
Message-ID: <44920401043544.0004788818NA2EM@mcimail.com>
Source record: 291349

From a friend who knows a friend who knows a tech at Radio Shack, we've finally got the scoop on an extended receive mod for the 2m hand-held.

** Remember: all standard disclaimers apply. Think twice before putting your hard-earned cash under the knife. also, chances are that after the mod, R.S. repair centers won't touch it...

Radio Shack HTX-202 Entended RX/TX Modification 4/1/92
---
* opens up RX to 118-227 MHz (aircraft & 220 band!)

* opens up TX to 140-159.995 MHz

* another small mod to enhance the LCD backlighting...

* also, one jumper can add 16 more memories

==========

(1) remove antenna, battery case

(2) unscrew all screws on the back and sides of the case

(3) carefully pry apart the two halves of the shell, pay special attention to the fine wires attaching them!

(4) locate and remove chip resistors R45 through R69.

(5) the above step opens RX to the complete range. Only remove R55 for 140-174 MHz

(6) add a 0 Ohm (or solder jumper) the empty positions of R77, R123, and R124 - this open the TX

(7) most of the chip resistors mentioned above can be located on the first layer of PC board. A couple are harder to get to, i.e. gotta dig a bit.

(8) LCD backlight mod: you will see three wires coming from the rear of the LCD display (red, white, blue). Follow the blue one to where it is soldered to the board. Move it to the empty position just to the left of the current place. This feature wi ll now enable the light when ever you transmit so you know that you are transmitting and who your transmitting to...

(9) locate IC6 (a square 48-pin chip) that is above and to the right of the lithium battery. Get a small jumper wire (#26 or smaller) and connect one end to pin #7 to either side of chip resistor R3. The function switch will now provide another "bit" t o address the memory channels. i.e. when not

holding the function button: works normally. When holding the button and tuning a memory channel: you get the extra 16 channels!

(10) close everything back up, tucking the extra wires in and being sure none are pinched by the case. Reset the CPU and your off!

==========

--->>> Remember! Do this at your own risk. Neither I nor Radio Shack assume any responsibility for you screwing up your nifty HT. Be sure you have a good level of soldering skill before you proceed. Having the service manual at your side is a great h elp. Also, a 'scope for fine tuning the circuits to work at the new frequencies. A digital multimeter can't hurt either. Keep all family pets out of the room while performing the above modifications. And most of all, don't believe everything you read on April 1.

723. Looking for suggestions!

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-01 04:51:50 UTC

The N8EMR Ham bbs is online to serve the needs of the
amateur radio operators..

HOW TO ACCESS THE N8EMR HAM RADIO TELEPHONE BBS !!!

System Name: N8EMR
Phone: 614-895-2553
Login: hbbs
Modems: TB2500 PEP/V.32 support
Times: 24hrs
IP Address: 44.70.0.1
Amateur radio annonymous ftp access is available via the ohio
netrom/ip network. CMHIP is the Netrom node Id and is known
by most of the nodes in ohio. (its slow but it works)
This is only via the ohio packet network. This sytem
is not available via the "INTERNET".

To access the system via the dialup, at the login prompt type hbbs
(lower case only), you will then enter the BBS program. Follow the
directions from the bbs prompts.

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload Here is some of software that is available
for downloading.

NEWHAM area. Pick the tools you need to become a ham
AMSAT news and satellite keplerian elements
KA9Q TCP/IP Software for various computers,
ARRL related files
Latest packet bbs programs and utilitys.

EMAIL CALLSIGN SERVER
US CALLS ONLY

Fall 1991 Data!!!!!!
---------------------

For those who do not have telnet access to marvin or one of the other
Internet callsign servers here is an alternative.

N8EMR's Ham BBS, 614-895-2553 has an email server up and running.
The Server is based on Buckmasters Fall 91 database.

------------------------ INTERNET AND CIS USERS -------------------------------

Mail should be addressed to
n8emr!callbook@tut.cis.ohio-state.edu
or
callbook@n8emr.uucp.

If you have a well behaved mailer or a well know return address
the reply path will be taken from your mail header. If you have
a strange reply path or non standard reply path. You can use the
option REPLY line to specify a return path.
On the Subject line include a list a call signs to lookup. If your
mailer doesnt generate a Subject line you can use the option CALL
to specify a list of callsigns. All other lines and info are ignored.

E.G.
# mail callbook@n8emr.uucp
Subject: n8emr w1aw
^D
#

------------------------- PACKET RADIO ----------------------------------------

Mail should be sent to CBOOK@N8JYV.#CMH.OH.USA.NA
You MUST use both the REPLY and CALL option lines.
The REPLY line should be as follows n8jyv!HOME_BBS!CALL, where
HOME_BBS is your local packet bbs where you would normal pick up
your mail, CALL is your callsign.
You must include the n8jyv! in your reply path.. Packet mail will fail
without this.

E.g.
SP CBOOK@N8JYV.#CMH.OH.USA.NA
Subject ^M
```

```
REPLY n8jyv!w8cqk!n8emr
CALL n8emr w1aw
/EX

------------------------------ FIDONET USERS ---------------------------------

Fidonet users can send request to call book 1:226/20.0

Mail sent to the fidonet address must have the following info
included the REPLY line in the following format.

REPLY fistname.lastname@fxx.nxx.zxx.fidonet.org

where xx is your fidonet node info.

---------------------------- OPTIONAL COMMANDS --------------------------------

REPLY This is an email address you would like to send the lookup info
to. Either Internet @ or ! addressing is fine.
CALL This is a white space separated list of callsigns you would like
to lookup.
```

> accessories than are offered by Radio Shack. Also, it is
> possible to get full repair docs? Thanks.

First, my apologies for losing the address/name of the original poster.

I know that the ICOM extended battery packs work with the HTX-202. I have
not used other accessories, but I understand that the speaker/mic should
also work (although r/s sells one for the H/T at about half the price
of the ICOM's).

It also works very well on packet.

Service Manuals have been a real problem. The engineers are very late
in developing this, and I have not yet received the proof (although
Korea promised that they would express it to me this week). Still
looking at at least a month for general availability on the S/M, but
all repair centers should have a copy of the proof within a week
of my receiving it.

|
| KDKA in Pittsburgh, PA is an exception to the rule.

The first few call sign letters vary by country. You can tell what country a station is in by its call prefix. If it starts with the letter A, K, N, or W, the station is in the USA. If it starts with a C, it's in Canada. Some other countries have groups of call signs that must start with 2-3 common letters/numbers. Check with the library or your local amateur radio buff for the real answer ...

There was an article in _Communications Quarterly_ for Summer 1991 that described "An Audio Imaging System for Enhanced CW Reception". It details the psychoacoustics of imaging and shows block diagrams of an imaging system using off-the-shelf audio components such as a graphic equalizer, electronic reverb (in expansion mode) and a stereo amplifier.

The article has quite an extensive reference list, but most are excerpts from the _Journal of the Acoustic Society of America_. I was disappointed to see nothing from the work that Hildreth did in the amateur radio publications.

It's been years since I was active on VHF CW, so take this with a grain
of salt. But I'm sure there's no problem with slow CW in the CW subbands,
so long as you avoid the calling and DX frequencies.

I was still able to choose my callsign as of the end of January. I was actually able to peruse the list of available callsigns that the DOC uses and see what was available. Except for the possibility of another person selecting the same callsign I did, somewhere in Ontario, a short time before I did, what I pointed at, I got. I suppose that it's possible that this has changed recently.

If you hurry you can get a Kenwood TH-77A dual band for around $400 from Ham Radio Outlet. They are being discontinued and they have a dozen or so left. Amateur Electronic Supply has some left too (I just ordered one from them so they better :)).

This is a great radio that some have labled 'too complicated'. Never thought that myself. Has everything one would need and then some.

Back when they first started upgrade identifiers they used a abbreviation
of the city where you passed the test. Having passed the test in Denver
I was signing WB0QHV/DV till my extra ticket came. You could generate some
really nice JA pileups with that call (HI).

In article <9204012051.AA06123@ucsd.edu> MUSCHINSKE%39A.DEcnet@scfb.nwc.navy.mil (39A::MUSCHINSKE) writes:
]You will probably have to design new receivers to do this. To get the
]accuracy you need, you will have to measure the leading edge of the
]jamming transmission. This will probably require some kind of log video
]detector. You then have to measure the time of that leading edge fairly
]accurately.
]
]For the timing requirements, technology has provided some solutions that
]were not available a few years ago. WWV is a good old stand-by for less
]demanding time measurements. GPS provides very accurate timing these days.

The only things that makes this whole problem difficult are measuring
the times of arrival accurately, and having a good timebase. I think
that Loran C would make a fine timebase. The pulses are Cesium accurate,
and the signals are easy to pick up with just a loopstick and TRF receiver.

This leaves the hard part: getting good time resolution. The time resolution
is inversely proportional to the modulation bandwidth (which is why radars
are wideband). A bandwidth of 3 KHz (the audio bandwidth) is not much -
used raw it gives uncertainties in the many miles. I think that using
correlators could reduce this to a few thousand feet, but it would
be touchy. Detecting the leading edge is not very useful, because there
may only be ONE leading edge (for a stuck mike), and it is easy to miss.
That's why I was looking at the audio. Maybe sometime (hah! I'll never have
the time :-{) I'll build a correlator (ADSP2105 should be just dandy)
and try phase shifting some speech audio (and noisifying it a bit) and
see what can be done.

Of course, once one is doing all this DSP (at the discrinator, of course),
one might as well do signature analysis.... but that's another research
project.

>Based on my experience as a VE, I'd have to agree.

Count me as one voice expressing disagreement with the above.
I'm currently attempting to pass the 12wpm. I almost made it
a while back, then got sidetracked by work, now I'm trying to
restart the process again. Lets see... 1/2 hour per day for
a few months for the last (failed) attempt.. Nope, I'd
definately disagree with the above! :-) (Especially since
it took me a year of tests to pass the 5wpm test for tech!)
(about 6 tests)

I wonder if the "its not so bad after all" comment is mostly
from those going from 12 to 20, or if the 5 to 20 crowd is
well-represented as well. Hmm... (I suppose I could get on
my statistics soapbox and make comments about "biased samples"
caused by the fact that we are looking at those who have
managed to pass the 5wpm test, but I'm currently out of
soap :-)

Dunno if anyone mentioned it yet, but my favorite has always been:

K9DOG

Of course, I've also enjoyed how some people can get creative with
phonetics, for example, during Field Day:

"Whiskey Three Fuzzy Wuzzy"

At the time, we were running:

"Kilowatt Number Two Zanzibar Ontario"

(I think 3-syllable phonetics "carry" better).

Cheers,
Andy

|
| KDKA in Pittsburgh, PA is an exception to the rule.

KDKA is not the only exception to the rule. KYW in Philadelphia is the other one. KDKA was the first commercial radio station in the country and KYW was the second. This is why they are the exceptions to the K/W system. (Apparently, KYW had to change its call letters to a 4 letter call starting with W when this went into effect, but in a nod to history (since KDKA and KYW are both Westinghouse stations, the second station created the first network), they were allowed to go back to using KYW in the early/mid 60's.)

Philadelphia has two sets of 3-letter call letters.

KYW -TV 3 and 1060 AM
and
WIP - 610 AM.

Are there any other 3-letter stations out there?

MONTHLY REPORTS OF SOLAR GEOPHYSICAL ACTIVITY FOR MARCH ARE NOW AVAILABLE:

The monthly reports of solar and geophysical activity for the month of
March 1992 are now available for anonymous FTP from the following sites:

solar.stanford.edu <--> 36.10.0.4 <--> "pub/1992" and subdirectories
nic.funet.fi <--> 128.214.6.100 <--> "pub/dx/solarreports" and subdirs
xi.uleth.ca <--> 142.66.3.29 <--> "pub/solar/1992" directory

The site at xi.uleth.ca also contains daily updated summaries of solar
geophysical activity in the directory "pub/solar/daily", and numerous other
solar and geophysical services.

The files to get are:

"marflr.doc" - Summary of Solar Energetic Events for March 1992.

"marmag.doc" - Summary of Global Geomagnetic Activity for March.

"martec.zip" - Summary of Global Total Electron Content (TEC),
compressed using ZIP.

"martec.zoo" - Summary of Global TEC, compressed using ZOO.

"martec.tar.Z" - Summary of Global TEC, TAR'd and COMPRESSed.

"sgdb-mar.zip" - Archive of all Daily Solar Geophysical Data
Broadcasts (SGDBs) for March using ZIP.

"sgdb-mar.zoo" - Archive of all SGDBs, compressed using ZOO.

"sgdb-mar.tar.Z" - Archive of all SGDBs, TAR'd and COMPRESSed.

SB SPACE ARL ARLS022
ARLS022 QSLing SAREX

QSL cards for the STS-45/SAREX mission should be sent to the
Sterling Park Amateur Radio Club, P.O. Box 599, Sterling Park, VA
22170. Include a large, business-size SASE. Mark on the envelope
"STS-45 SWL" if you are looking for confirmation of a signal report.
For two-way QSO confirmation, mark the envelope with "STS-45 QSL 2
WAY." Remember to include the date, time and signal report with each
card.

DX Bulletin 18 ARLD018
>From ARRL Headquarters Newington CT
April 3, 1992
Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB DX ARL ARLD018
ARLD018 DX news

Thanks to Steve, W9NUF, and the Northern Illinois DX Association, and Paul, KB1BE, and the Connecticut DX Association for the following DX information.

BANGLADESH. The Hungarian operation signing S2/HA5BUS has been active on 15 meter CW. QSL to the Globex Foundation, Box 49, 1311 Budapest, Hungary.

SOUTH SANDWICH. The VP8SSI DXpedition is slated to leave the island shortly. They may try to operate briefly at South Georgia on their way back to the Falklands. SSB QSLs go to AA6BB. Send CW and RTTY cards to KA6V.

SAO TOME. S9AGD by Eric, SM0AGD, is active until April 8 on all bands/modes, with special attention to CW and the WARC bands. QSL to his home call.

ALBANIA. ZA1TAJ was worked recently on 7005 and 14024 kHz at around 0230z. Other Albanian nationals have been active, notably ZA1TAA on 20 meters and ZA1TAC on 30 meters.

COCOS KEELING. VK9CL has been very active on CW, usually 4 or 5 kHz up from the band edge. He was worked on 7005 kHz at 0055z. This operation will be QRV until April 6. QSLs go via F6IMS.

HONG KONG. VS6WV is now active on 7 MHz CW around 1230z. QSL to K0TLM.

BOTSWANA. Dave, 9L1US, will begin a new assignment in early April. He will sign A22US. QSL via WA8JOC.

FROM THE ARRL QSL BUREAU. The QSL bureau in Seychelles, S7, and the bureau in Rwanda, 9X5, are no longer in operation. Amateurs wishing to verify contacts with Seychelles or Rwanda should either QSL direct or via QSL managers.

HOW TO QSL DX FROM SPACE. QSL cards for the STS-45/SAREX mission should be sent to the Sterling Park Amateur Radio Club, P.O. Box 599, Sterling Park, VA 22170. Include a large, business-size SASE. Mark on the envelope "STS-45 SWL" if you are looking for confirmation of a signal report. For two-way QSO confirmation, mark the envelope with "STS-45 QSL 2-WAY." Remember to include the date, time and signal report with each card.

You must be blithering idio....oops...I mean you must be
congratuated for your willingness to take on this sort of
project. I think it's a great idea.

Hopefully it might spark some real interest by the ARRL and area
co-ordinating bodies. In fact, has anyone seen any responses,
official or otherwise, from the ARRL on this subject?

> Callsign
> Output Frequency
> Input Frequency

And a single line for contact person, address, and/or telephone
number.

Sure would like to see something become of this suggestion. Like
REAL support from the ARRL.

753. AURORA WATCH: Middle Latitude WATCH Extended

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-04 07:03:44 UTC
From: oler@rho.uleth.ca
Message-ID: <oler.702371024@honte>
Source record: 290336
Cross-posted to: sci.astro,sci.geo.meteorology,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

EXTENDED: 07:00 UT, 04 APRIL

/\

VALID UNTIL: 18:00 UTC ON 05 APRIL

MODERATE RISK PERIOD: 04 - 05 April (UT days)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: LOW - MODERATE

POTENTIAL LUNAR INTERFERENCE: LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN WASHINGTON STATE TO CENTRAL IDAHO TO SOUTHERN MONTANA TO
NORTHERN SOUTH DAKOTA TO SOUTHERN MINNESOTA TO WISCONSIN TO MICHIGAN
TO NEW YORK STATE TO NEW HAMPSHIRE TO SOUTHERN MAINE.

SYNOPSIS...

Auroral activity became substantially enhanced during the local evening
and early morning hours of 03 April. Observations of activity from the
northern tier of the U.S. states was sporadically reported throughout
the night. Activity fluctuated considerably in conjunction with
substorm periods. Activity appeared to peak between 12Z and 15Z,
although most of North America was not able to observe much of this
activity.

Activity has since diminished considerably and is now almost dormant (as
of 07Z on 04 April). Considering the unstable nature of the activity
over the last couple of days, and the moderately favorable position of a
solar coronal hole, the Middle Latitude Auroral Activity WATCH is being
extended through to 18Z on 05 March. Unless conditions change
substantially, this watch will be allowed to expire at that time.

Please note that automated hourly reports of auroral activity sightings
from North American regions are now available for anonymous FTP from the
site: xi.uleth.ca (IP number 142.66.3.29) in the directory
"pub/solar/Aurora/current". The file to get is "current.obs".

Yaknow I thought some of our local hams made the cover of QST.
But then I looked closer and it wasn't them.

I will have to agree. Disney and Ham Radio do not belong together anymore
than a station celebrating Coors from Golden CO would be appropriate.

Besides there are already enough mickey mouse operations on the air.

PWS> Tonight, on Jane Pauley's pseudo-news magazine show (the exact title
PWS> escapes me title), there was a story on the National Weather
PWS> Service, and how
PWS> budget cuts, cost overruns from Unisys on a doppler radar contract,
PWS> and
PWS> general mismanagement has caused the NWS to put lives needlessly in
PWS> danger through inaccurate weather reporting.

I really would hate to see you guys get all up in arms about this. There has been so much talk recently about how the media just creates problems rather than helps it.

I didn't see the story... but I feel that it should have been mentioned that HAMs volunteer their time to bee severe weather spotters. But that wasn't the story was it.

The story, or how Ms. Pauley wanted it to seem, was the NWS was an evil entity hell-bent on destroying human lives.. and we must do something to stop it before it kills someone.

Sensationalism.. gotta love it.

I have been reading up on the questions for the Novice test.. having already passed my Tech test (if you didn't read the story.. it's not that big of a deal).

However, I am going to see if I can use this forum here to figure out exactly how Commercial business over the air works.

Now, as I understand it, you can't conduct personal business over the amateur frequencies. I understand that literal meaning of "commercial" but what I don't understand is where the lines are drawn. I am going to give a couple of examples and see how you guys respond to them.

INCIDENT #1

I am working at an event for charity. A man, who was supposed to be there an hour ago, is not there. I want to call him using my 2m HT and phone patch and tell him to get his &^%$# over here.

INCIDENT #2

My car dies. I am far away from civilization of any type of civilization. 20 miles ago down the road was a town with authorities. With my HT I can send and receive messages to the town.. (phone patch is there.. etc). Now.. I am trying to decide if I should call the police or a tow truck. Hmmmmmm....

Thanks...

:

This happens more often than one might think, considering the load at the FCC. The problem will arise if you upgrade or when you renew. You will *not* be able to simply write your correct birth date on the 610. You will need to send them a letter explaining the mistake and a copy of a driver's license. I wouldn't wait; write now or call the FCC for instructions.

761. How old is oldest diode???

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-08 14:55:08 UTC
From: Hugh_E._Wells.El_Segundo@xerox.COM
Message-ID: <".8-Apr-92..7:54:21.PDT".*.Hugh_E._Wells.El_Segundo@Xerox.com>
Source record: 291285

I'm not sure about the first marketed packaged diode, but the silicon diode, such as the 1N21-23 series was developed at MIT in about 1938. One of the developers of the silicon diode detector was Russell Ohl, a research scientist at MIT. As I recall, the first application for the 1N21 package style was for 10ghz radar used in WWII.

Philmore packaged and marketed a galena crystal detector for use in crystal sets for many years prior to 1938, if you wish to consider that style. The typical package was a catwhisker supported on a ball mounted arm suspended over the galena. Later forms of this detector had the catwhisker sealed (glued in place) to reduce oxidation of the crystal surface. A variant to this type of detector was the same crystal mounted on a small wooden base (about 1 inch in diameter) with a domed glass cover (bell jar style).

Of course, at the turn of the century, many types of detectors (rectifiers) were produced. These varied in design from chemical to mechanical, and each was packaged for mechanical stability and used for RF detection.

->VHF/UFH
->To: info-hams@ucsd.edu

->QUESTION: What model is most widely used to determint coverage
->at 144 & 440? Stright line-of-sight? Longly-Rice? TIRM?

The army's Network Assessment Model (NAM) uses TIREM (Terrain
Integrated Rough Earth Model for the non-modeling types) for
propogation modeling of VHF and UHF LOS tactical radio equipment.
I worked with this model for about a year and a half (until last
years RIF) and it is pretty slick. Runs on a Silicon Graphics
4D/25 machine. I think TIREM is the widely accepted propogation
model for LOS FM.

I wanted to post this information to see if others were having the same problems with DXCC endorsements through the ARRL DXCC awards program. I sent in a 30 station endorsement January 15 and have not received a response as of April 8 (almost 3 months). I was told that ARRL has fully automated this process, which might explain why it is taking longer than the old manual days. Are others experiencing this, or is it just my application (maybe I flubbed it)???????? :(:(

>
>Simple: price. Commercial HTs cost two or three times ham units, and
>generally have far fewer features at that. The police/fire/rescue guys
>need units that will stand up to phenomenal abuse: impact, heat, water,
>.357 magnum bullets, etc... and still work. Hams don't need, and
>generally arent' willing to pay for, that kind of reliability.

This is not necessarily the case. Let me take two examples that immediately come to mind.

1) In the 1970's and 1980's Jordache jeans were selling at a cost several times greater than my Wrangler jeans. The reason was the name brand and advertising--not any extra utility.

3) My sneakers cost circa $40-$50 (even that I think is way too much) but the name brand "pump" type sneakers may cost $100-$150. This is also due to advertising.

The question I have been asking, and everybody has not answered is: What is the actual cost of making a rugged HT? The use of heavy steel in the case, the use of proper seals to prevent water damage, etc, etc can't be so expensive as to double or triple the price of the HT. The extra design and testing to insure durability may affect the cost but two or three times? From where I stand, something certainly is not adding up. Several explanations come to mind:

a) Motorola is charging "all the market can bear" (personal note: apologies to someone I have been corresponding by email).

b) There isn't enough competition.

c) There is a cost in the design and construction of rugged HT's that I have either underestimated or missed.

To put it another way. Is there any way to take a ham HT and ruggedize it at home? Perhaps using extra padding and a steel case.

I recently bought some HF gear and am in need of manuals for them.
Are there any vendors who sell owner's manuals and shop manuals.
Alternatively if someone who has the manuals could photocopy and send
it to me, I would be more than happy to pay for the costs of copying
and mailing. Below is a list of the manufacturers and equipment.
Thanks.

Manufacturer: Yaesu
Item : FT-101B Transceiver

Manufacturer: Yaesu
Item : YO-100 Monitor Scope

Manufacturer: Yaesu
Item : Landliner (phone patch/external speaker)

Manufacturer: Yaesu
Item : FV-101 External VFO

Manufacturer: Reliable Electronics Design Company
Item : REDCO-C40 Frequency Counter

Manufacturer: Reliable Electronics Design Company
Item : Model RPS-1/C-40 Power Supply (for above unit)

Manufacturer: ?Turner?
Item : Turner Expander 500 Microphone

Manufacturer: D&A Manufacturing Co.
Item : Warrior KWD 1000 (I think this is a linear amp but not sure)

Manufacturer: D&A Manufacturing Co.
Item : Warrior 220 Power Supply (for above unit)

More TS 520 fun. I have a cracked ferrite slug inside the tuning coil
of the mix coil unit. It won't turn and hasn't really "broken", fallen
inside or come out or anything. Has anyone faced this one with success ?

I have 2 choices 1. Replace the coil. I am going to call Kenwood
to see if the part is available. Wish me
luck.
2. Use "super glue" or some drop of something
else that can hold the slug together so I
can turn it.

Are there any other reasonable alternatives?

I thought nothing could beat the tabloid journalism of the previous story (on "gender bias" in schools), but the NWS story was so full of hype and obvious technical misconbooberations as to be laughable at best.

The only techonology that comes close to solving the prediction problem is doppler radar, which has been in the R&D stage since the early 80's. Unfortunately, trying to explain the R&D process for a new technology to a news trog is generally a hopeless effort. Pauley made it seem like the'd been try to *install* an already working system for the past ten years (thus making it seem less likely that it will in fact be working in 1994).

I agree with you to a point, but I'm at a loss to explain how my ordering
a pizza via the local patch or various other examples of "personal business"
constitute much threat to Ham Radio As We Know It. Still, I would object to
the blatant commercialization of the ham bands. It does seem to me that
some rule-making IS in order, to permit the former while guarding against the
latter. My question is - how could a rule be written to do so? I think
everyone knows what we WANT, it's just a matter of coming up with the proper
verbage so we don't get more than we bargained for (such as the use of
"excess capacity" by commercial interests). Any suggestions?

I once was asked to fix a CB radio after 2 repair shops
gave up, and I traced the problem to a broken slug.

Using an electric drill I "broke" the slug until it crumbled
completely, being careful not to damage the coil. Then I took
a few slugs from coils in junked TVs and scanners and tried them
until I found one which worked. Simple way to make $45 :-)

Radio Shack used to sell a coil assortment but I don't see
it in recent catalogs.

I think Heathkit's problems were largely self-inflicted. The older
tube rigs, like the SB102, were nice radios, especially for the price.
Unfortunately Heath came out with a whole series of turkey ham rigs
at about the same time. Simultaneously, the prices of their stereo
and TV equipment went through the roof. I don't know what happened,
but it's a real shame.

The easiest and cheapest way is to chip the old slug apart. You can use an exacto knife (if it's a large enough coil), a small jewler's screwdriver, or a very small drill bit. Once you get it cracked, it's pretty easy to get it to come out piece by piece.

For a replacement, Radio Shack sells an inductor and choke assortment. You will probably find one the right size somewhere in the pile. Or, look through some old radios to find one that will fit. As a last resort, you can get slugs from Amidon or Kenwood directly.

I wouldn't try gluing the slug - you'll end up gluing it to the inside of the form, making it permanently adjustment-proof.

In Omaha your NWS office personnel might take their jobs more serious. I lived in the Chicago area all my life execpt for the last 3 years. I have also been involved in Skywarn and other programs. I am not at all amazed that the individual held the NWS responsible. Their track record on predicting severe in northern Illinois is deplorable. The forecasters generally don't give a damn anymore, partly due to the state of equipment, and mostly due to poor management. Thats what happens when government management positions are politically driven.

At least for northern Illinois, I think the story was sad but true.

Greg

Ditto. As a near-penniless high school student, I was able to get on the air because of the DX-60 I put together from a kit. I never had a moment's trouble with it.

When I got my General ticket, I bought a DX-100 (used), and likewise had a decent AM signal for low bucks.

Fast forward to 1991. I miss the broadcast quality of AM and decide I have to have an AM rig again. What did I look for? Right. A Heath DX-100. 35 years old and heavy as an anvil, it works flawlessly.

Amen. Not expert enough to design homebrew stuff at the time, and not rich enough to buy top line equipment, I'd have not gotten on the air had it not been for Heathkits.

R.I.P Heath.

Forwarded from Lud Sibley by Ron McConnell:

>From: rigel.cc.bellcore.com!las (sibley,ludwell a)
>To: rcmcc

Ron -

If you wouldn't mind rerouting this for me . . .

The first true semiconductor diodes, in the 1N21/1N22 style
cartridge mounting, were a British development ca. 1940,
for use as point-contact silicon mixers in early S-band radars.
The British divulged design info to us, and the US-improved
design went into use shortly afterward.

The numbers 1N21, 1N22, 1N23, et al. would have been assigned
by the Radio Manufacturers' Association ca. 1942-43.
(The numbering plan began at 21.) Western Electric and Sylvania
made a truckload of these units, under the 1N21A, 1N21B, etc.
variants, during the war. By contrast, the well known 1N34
germanium unit wasn't introduced (by Sylvania) until Feb. 1946
(via an ad in "Electronics").

I believe Ohl was actually a Bell Labs person, at least
in later life (Fifties). He published several papers
in the Bell System Technical Journal between 1947 and 1959.

The '38 date is way too early. The British wartime origins
are well documented in a (British) book that I have
("From Metres to Microwaves").

The reason I'm so dxxn smart about this is that a Japanese
collector asked essentially the same question a month ago!

788. Relatively New UHF Transmitter IC (MC1317x)

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-08 20:52:33 UTC
From: jfw@ksr.com
Message-ID: <11322@ksr.com>
Source record: 291312
Cross-posted to: rec.radio.amateur.misc,sci.electronics

RF Design this month has an article about the MC13175 and MC13176 ICs, which are aimed at simple data transmitters for consumer electronics, in particular in the 902-to-928MHz band. The ICs comprise a Colpitts reference crystal oscillator, a UHF oscillator, a fixed division prescaler (/8 for the 13175, /32 for the 13176), and a phase detector. It can be phase modulated for FM voice or low data rate applications, or AM modulated (up to 25MHz bandwidth, making video transmission possible). It looks like it has lots of possibilities for simple fixed-frequency gadgets.

790. Opening a dealership - what does it take?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-08 21:00:59 UTC
From: erc@pogo.Corp.Sun.COM
Message-ID: <ku6nobINN9nn@jethro.Corp.Sun.COM>
Source record: 291314

Recently, I was at a ham store in a nearby state - the only
store in that city (state capitol). The salesman was very
inattentive and rude. When I asked him if he carried
anything other than the "big three", like Alinco, he said,
"we don't carry junk like that." Being an Alinco owner,
I was rather put out by the implication, and by his "if
I feel like it, I'll help you - I'm the only game in town, so
if I want to treat you like sh*t, I will".

I was discussing it with a couple of ham friends and they said,
"why don't you open your own store - or at least, start taking orders
for radios or something." What does it take to do this? Aside from
doing the store-front thing, what is required from a manufacturer
to order radios? I don't have the big $$$ it takes to keep one of
everything in stock if I have to buy them up-front. Any suggestions?

I'd just like to see (1) an alternative to this store, and (2) an
alternative to the "big three" and their very high prices for stuff.
Alinco,for instance, sells hand-helds that go for $50-$100 less than
their "big three" counterparts.

> 2. Use "super glue" or some drop of something
> else that can hold the slug together so I
> can turn it.
Ah... I've been here more often than I wanted to be :-(. Haven't tried superglue, I'd be worried about inadvertantly gluing the slug to the coil form. What I have done is to find what I hope is a physical and magnetic replacement slug from the junk box, then completely break the bad slug so it crumbles out of the form, then clean out the dust, then thread the replacement in carefully. Use the correct tuning diddlestick when adjusting slugs, I usually broke slugs when trying to fake it with a homemade or wrong tool. Also avoid hitting bottom when diddling, slugs can break this way, too. Practice on scrap first if you have enough junk coils around.
>
Hope this helps

>while I was 75 feet up a tower. It buried itself antenna-first in the
>ground. It was fine, except for the bent-up antenna, and it had only moved
>off-channel about a Kc or so.

My Motorola HT-220 suffered less dramatic abuse at my hands; falling
from the roof of my car (bouncing off the car on the way down) onto
the hard pavement coming to rest in a deep puddle of rainwater.

Of course it worked just fine afterwards.

>At an electronics show in the early 70's, the Moto salesman was using
>his HT-200 to drive nails into a block of wood.

That's the great thing about Motorola radios; you can use them as a
rather painful blunt instrument to defend yourself, if necessary.
Just use the rubber duckie as a handle, and give it a good swing...
Then you can call for an ambulance after you've disabled your
attacker.

>Mine is still working, 20 years later. No, it's not for sale.
> - Brian

Interesting.. mine is still working just fine 10 years later, and its
not for sale, either. On the other hand, I could probably be
convinced to let my Kenwood TR-2500 go.

I carry the Motorola HT-220 around in my briefcase every day. The
Kenwood sits at home in its charger. I carry the Motorola because I
know I can depend on it working if I need it, and the fact the the
plain, non-sexy radio has superb battery life. I believe that it
consumes 4ma squelched. I know that I'll have the HT-220 long after
the Kenwood radio is gone or replaced.

797. Kenwood TM741A Mods causing problems??

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-09 04:01:55 UTC
From: tstader@attmail.COM
Message-ID: <9204091801.AA07254@ucsd.edu>
Source record: 291321

Recently I did the published mods from IS0XSE for this radio but ran into a problem that may or may not be releated So I thought I would come here for some thought from some the others who might have this radio.

1. What does the green wire that has been cut actually do? Is it part of the PLL circuit by any chance?

The reason I ask this question is.... I have noticed that after the radio warms up, it drifts high on both the 144MHz and the 440 MHz bands (the UT-50 unit hasn't come in yet via HRO). On the 440 band the tuning if off by a full 5KHz. On two meters... the offset doesn't seem to be too bad but it appears high too.

2. How about the other 0(Zero) Ohm resistors found on the supplied schematic? What do R56, R58 and R60 do in the Control Unit?.

Overall I like the radio... it annoying to have the freq. drift. And I cannot seem to find out whay the shortage of 6 meter units. Anybody know any rumors about 6.

Just watch me get egg on my face one of these days.
As far as I know, the only mod you can do to this radio to make it go out of
band is to put a different crystal in it. Then you won't be able to read off
the correct frequency or talk on 2m. In other words.....look for another
radio if you want something that can go out of band. My Kenwood TH77A works
very nicely and the Icom(?) rig works equally as well.

>
>73
>Clark
>WA3JPG

Clark, there are dozens and dozens of varieties of ferrite (called "mixes").
These are developed for different frequency ranges, different quality
factors ("Q"), and also different permeabilities. This means that even
if you can find a slug that will mechanically fit into your coil form,
the chances of this slug matching the characteristics of the broken
one are about a thousand to one.

I'd try the Kenwood approach first and get an entire replacement coil.
If Kenwood, for wome reason, doesn't have a stock replacement, try the
local Ham dealers/repair facilities. You can usually find a dealer
who has a replacement coil he would be willing to part with. This way,
you know that the rig's performance will not be degraded. Also, I would
suspect that the threaded interior of the coil form will be damaged
by any attempt to remove the broken slug.

Good luck.

807. Becoming a Ham dealer

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-09 13:23:55 UTC
From: dube@cpdvax.CSc.ti.COM
Message-ID: <199204091317.AA08088@tilde.csc.ti.com>
Source record: 291181

Ed Carp asked about how to be a dealer, after having had a bad experience with "the only game in town". I suggest contacting Alinco, and other Ham equipment manufacturers whose equipment you (and even some you don't) and ask them whether and how they franchise dealerships. Find out approximately what kind of investment it would take. Put together a business plan that you can present to one or more banks--a plan that shows you are serious about making a success of the business--screw up your courage (you may get som "no's") and start looking for financial backing.

Good luck!

The correct answer is "C".
My sugestion would be to construct a duplexer. There was an article in QST
last year on just that written by WB6RBE. I built and tested one for Dave while
he was writing the article and it works great. He did a compairson to a
comercial unit and by the construction methods he used it out performed the
Larson unit. There is a store in Sacramento that sells the parts in kit form.
If you are interested I would recomend calling ARRL to find out the month the
article came out and they might even send out a copy of it to you..

I'll agree with Greg's comments 110% and then some. The NWS went to great
lengths to cover their butts with that cock-and-bull story they put out
when the tornados hit the Joliet-Plainfield area just a few years ago.
They said 20 minutes wasn't long enough to warn anybody when the damn
button for the tornado whistles are right there. I've lived in northern
Illinois two thirds of my life and people don't take the weather watches
and warnings seriously because their track record is so bad.

I've heard that $1 or $2 is sufficient. I've generally sent IRC's because
I felt I was being arrogant to assume that the DX station had any use for
US currency (I don't know what I would do if I received a British pound
note with a QSL card!). Unfortunately, IRCs are not accepted by all
countries, and are a pretty bad deal - we pay 95 cents, and it only nets
the foreign station a surface mail stamp - probably worth a lot less than
95 cents US. I am still hesitant, however, since I recall reading several
years ago that it was illegal in many countries for an individual to be in
posseision of foreign currency. I sure don't want to thank a DX station
for working me by putting him/her at risk of being jailed! Any thoughts
on this folks?

Motorola had a demo set up at the RF Expo in San Diego where they were transmitting video in the 902 Mhz range. I managed to get a couple of samples of each and I'm looking forward to playing around with them. It's pretty cool because the samples came with a PC board etched for there evaluation circuit with lots of extra room to add your own modifications.

ARLX013 Documentary award

Television station WANE TV in Ft. Wayne, Indiana, has won
a national Headliner Award in the category of outstanding
television documentary or editorial from the press club of
Atlantic City. The film, Last Voice from Kuwait, produced
by WANE president and general manager Frank Moore, WA1URA,
concerns Amateur Radio activity from Kuwait during its
occupation by Iraq in 1990 and 1991. Headliner Award
winners include major market newspapers and network
broadcasters as well as small circulation periodicals and
individual broadcasting stations, according to a WANE news
release. The film's producer and writer was WANE News
Anchor Joe Gregory. A story by the same name and on the
same subject appeared in QST for May, 1991.

SB SPCL ARL ARLX014
ARLX014 KB0HXY wins award

Angela Fischer, KB0HXY, has been named the Westlink Young
Ham of the Year for 1992. Angela, 13, was first licensed
at age 10 and holds a General Class license. She lives in
St. Louis and is the second consecutive young amateur from
that city to receive the award. The 1991 winner was
Richard Sammy Garrett, AA0CR. Angie (as she prefers to be
called) has introduced a number of young friends to
Amateur Radio. Her 7-year-old brother Dan also is
interested but he thinks quote he may be too young end
quote. Missouri Gov. John Ashcroft, upon learning that
his state had notched two consequtive award winners, said
quote I am delighted that it is a Missouri youngster who
is a national and international example of so much good
done by so many youngsters end quote. Angie will receive
her award, which is underwritten by Yaesu U.S.A., at the
1992 Dayton HamVention.

I have a mod for the Yeasu FT-411 that allows you to change the transmit and receive limits by dumping the data from the HT to a computer. I think I understand how to do it, but can anyone tell me how the cable should be made up? What protocol does it use? Has anyone out there tried this mod? Is it compatible with a FT-411E? What are the pros and cons of this mod?

Also, is there anyone out there who can direct me to a mods database on internet or packet? I do not have FTP access.

>two or three times?

I used to work for R. L. Drake Company who used to make Amateur as
well as commercial (Marine) equipment. The SPR-4 shortwave receiver
was brought out in an FCC-certified commercial version (I think it was
called the SSR-4) for a much higher price. The only difference I
recall was the front panel and cabinet. Most of the difference in
price was due to the additional testing required to prove that it
met FCC specs.

The 1750 meter band is not a ham band.

The power output is limited to 1/2 of a watt or so. And antennas are limited to something like 50 feet. So the band is not good for much.

As an ironic twist most of the activity on 1750 meters is in CW as it gives the greatest range per watt!

829. Icom 24-AT Offset steps

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-09 19:01:30 UTC
From: Greg Moore <UD173191@NDSUVM1.BITNET>
Message-ID: <92100.140130UD173191@NDSUVM1.BITNET>
Source record: 291202

Does anybody know of a way to get the 24-AT to use the 5kHz offset steps that the manual SAYS it should be able to use? I RTFM and it says that the USA version (which I believe I'm supposed to have) can do 5kHz steps--mine only does 25kHz steps for the offset! You can set it to almost anything, but you're limited to 25kHz... mildly annoying when we couldn't set the offset just right for the shuttle...

Thanx!
Greg Moore N0ODQ

Sounds like a fascinating chip. Jeff Duntemann (KG7JF) and I (but mostly he) have been working on the idea of easy-to-build VHF receivers and transmitters. We contend that with modern printed circuit boards and ICs, it's probably easier to build a 2-meter FM rig today than it was to build a CW HF rig in 1940.

Dead wrong. The National Weather Service has absolutely nothing to do with the tornado siren system. That is covered by county and local Civil Defense / Emergency Management agencies. The NWS can disseminate all of the Tornado Warnings that they want, but if CD doesn't want to sound the sirens then they won't be heard. What's rarely brought up is the fact that FAA personnel and local police agencies knew about the tornado but neglected to warn places in the path of the storm. If the town hit first were to call a city down the road and said "We've got a tornado coming your way," I doubt that ESDA would say "Thanks, but since the NWS didn't issue a warning, we're not going to sound the sirens." On the show the other night the lady interviewed from Plainfield state the she saw swirling clouds, hail and debris flying around. If that were me I'd take cover! Do people need the weather service to tell them that a severe thunderstorm is dangerous? A severe thunderstorm watch and warning were in effect ath that time, and the context of EVERY severe thunderstorm warning contains the line "SEVERE THUNDERSTORMS CAN AND OFTEN DO PRODUCT TORNADOS WITH LITTLE OR NO WARNING." Where were local amateur radio operators and civil defense spotters when this took place?

And by the way, local weather service offices do not issue watches, they're issued from the Severe Storms Forecast Center in Kansas City, MO.

834. 2 meter dipole?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-09 22:46:26 UTC
From: cvm@nauvax.ucc.nau.edu
Message-ID: <9APR92.22462672@nauvax.ucc.nau.edu>
Source record: 291207

I need to put a 2 meter antenna outside my house. The two options I am considering are:

1 - A Cushcraft ARX-2B. Costs about $50 plus 40 feet of coax and $15-20 for a mast. The top of the antenna will be 30-35 feet off the ground.

2 - A homemade dipole hung vertically in a tall pine tree next to my house. I don't know what this will cost to build. I will need 110 feet of coax to get from inside my house to the top of the tree. The top of the antenna will be about 75 feet off the ground.

Since this is for 2 meters it would be easy to make a full wave dipole instead of a half wave. Would this give me better gain/performance? I would appreciate any advice about the advantages or disadvantages of either option.

Source record: 291208

What a bunch of "boy have I never accomplished anything and I want to
rain on everybody else's parade too..." lids have gotten into ham radio today.
I avoid the idiocy of 14.313 as a major embarasement, by realizing
that there are a heck of a lot of other frequencies and I do know how to
get my receiver to another. I took great enjoyment in the QST cover that is
Copyrighted by Disney, and worked the N6 Mickey Mouse station TWICE and will
request both certificates. I won't go into it but why don't some of you
crumudgeons crawl back under your rock and go back to 14.313 Mhz. Forbid any
body should enjoy a hobby - sorry we can't all be pseudo lawyers and pseudo
repeater cops. Get a life (I hate that phrase but it really applies here)!
Please, don't respond because they will only be trashed and unread.
73 and see you on the bands.
Carty KA2Y (Licensed since 1958 - extra since 1979) and proud of it!

836. More Zitting family

Newsgroup: rec.radio.amateur.misc

Having seen all of the posts about the Zitting family here
recently, I was pleasantly surprised to run into Laura
Zitting at her place of employment in Salt Lake last night.

She is the hostess at a local restaurant, and as I was leaving
she noticed my handheld on my hip, and commented on it. I had
a short chat with her, and told her of the comments made on the
net about her family, and told her that she is famous. She
blushed red, and replied that she had heard.

She is a very charming young lady, and if I didn't have
a wife and kids, I would have fallen in love right there!

She says that she works mostly 40m CW, but that it is
a real struggle to find an opening at the family shack.

I told her that there had been some speculation about there
being two families at their home. She says that it is one
family with kids from two marriages.

Anyway, I just thought I would pass this along.

844. Announcing the Repeater Mapping Project (Electronic!)

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-10 05:53:16 UTC
From: steve@wattres.San-Jose.CA.US
Message-ID: <1992Apr10.055316.11867@wattres.San-Jose.CA.US>
Source record: 291218

Here it is, folks! The *one thing* you've all been waiting for! With baited breath, even! (Ewwww... ;)

A repeater mapping project for USENET. Just like the UUCP mapping project. With YOUR HELP, we can make a complete database of repeaters nationwide, and have it available to do all manner of useful queries!

Enough of the hype. (It's hard typing in that sleazy-salesman tone of voice!) :)

The address: repeaters@wattres.sj.ca.us

(for those who don't like the US domain, there's a UUCP mapping project entry) (for those who don't like the UUCP domain, give it to UUnet. They'll figure it out).

Please note that no human being sees any of what happens to repeaters@wattres.sj.ca.us. If you have a question (other than a simple help request), send that to me, steve@wattres.sj.ca.us.

The server will only recognize one repeater per mail message. If you want to submit multiple repeaters, you will have to submit multiple mail messages. A daemon will auto-reply when your message has been processed. If your message has some sort of evil error in it (i.e., one of the required lines is missing or undetectable) it will send you a message with the error and a copy of this file.

The information format I want:
Each line starts with # and then 4 UPPER-CASE letters (hopefully mnemonic) describing the info on that line. The rest of the line is (more or less) free form.

The *required* lines:
#CALL (the callsign of the repeater)
#OUTP (the output frequency of the repeater)
#INPT (the input frequency of the repeater, or just + or - for standard offs)
#LOCA (the longitude, lattitude, and HAAT of the repeater)
#SEND (the e-mail address of the sender)
#UPDT (the date & time of last update)

The other useful lines:
#TONE (the CTCSS input tone, followed by '/' and output tone, if there is one)
#COVG (the primary coverage area)
#911C (the 911/emerg autodial code, IF THE REPEATER OWNER OKs GIVING IT OUT)
#AUTO (autopatch facilities available?)
#CLSD (if this repeater is closed, who can use it)
#AFFL (affiliation i.e., RACES ARES etc)

#SPON (sponsor of the repeater)
#CONT (how to contact the sponsor, name/addr/phone #)
#LINK (links to repeater, callsigns and frequencies, or something like CONDOR
for large nets)
#COMM (a comment, as many #COMM lines as you like)

For example (this repeater does not exist):
#CALL KY6QRM Mobile Uncoordinated Repeater (my car)
#OUTP 440.15
#INPT 222.22
#LOCA 122 01 09 W / 37 18 30 N / -2m
#SEND steve@wattres.sj.ca.us (Steve Watt)
#UPDT Thu Apr 02 00:39:58 PST 1992
#TONE 100.0 / 131.8
#COVG My house, special events
#AUTO It's a car without a cellphone. No autopatch.
#CLSD Only availble to people with the callsign KD6GGD. ;)
#SPON KD6GGD and his performing Corolla All-Trac
#CONT E-mail is the only way. steve@wattres.sj.ca.us
#LINK Only to my HT
#COMM I hope you're at least scanning this message. Send the registrations
#COMM (for active repeaters only, please) to "repeaters@wattres.sj.ca.us".
#COMM It's an ICOM 901A with a 220 band unit. It also spends most of its time
#COMM off, when I'm not in the car. It is not in repeater mode when I am in
#COMM the car. So it's not a terribly useful repeater, unless I say so. :)

Once again: The address is repeaters@wattres.sj.ca.us. Don't send messages
there that you expect somebody to read. Send those to me.

I realize that it may be hard to get the longitude, latitude and HAAT for a
repeater. Contact the repeater owner/sponsor for the HAAT, and a more-or-less
exact location. Then you can find your nearest friendly library to figure out
the longitude/latitude.

>I need someone can test interaction between 440Hhz and commerical
>airline freqency.
>Dela Airline told me that operating Ham in airplane is upto a captain
>to decide...
>I am wondering is there any interference between them

There's more to it than the radio frequencies themselves. For that part of it, there is little chance of interference if you have a good radio and only use low power. However, just the presence of an extra RF transmission or any electronic RF noise in an aircraft has the potential for interfering with electronics used for communication, navigation, and, more recently, collision avoidance. You could only test for that kind of interference while on board the specific aircraft.

From an HT, I think the chances are very low that you could cause a problem. But no one can blame them for taking control of an unpredictable situation. No matter what you come up with from independent testing, the airline or the pilot-in-command (PIC) get to decide.

The Federal Aviation Regulations (FARs) Part 91.21 say that operation of "portable electronic devices" (including radios) is prohibited unless the PIC determines that they "will not cause interference with the navigation or communication system of the aircraft on which it is to be used." In the case of an airline, charter, or freight operator, the company/owner can make a policy about any such devices. Most U.S. airlines have done exactly that. I've been told on flights on United and Southwest Airlines that they do not allow any radios, even to receive. I'm glad to hear (from your message) that Delta still lets the PIC decide.

Note: I just looked through the FAQ on this subject and it is not correct. It lists the correct FAR 91.21 but says that operation of radios is entirely pro-
hibited on airlines. I'll fix it before the next auto-posting on the 15th.

From: clemon@lemsys.UUCP
Message-ID: <clemon.07x0@lemsys.UUCP>
Source record: 291220

I have heard about a factory mod to the FT-470 to fix it's intermod problems. Do the new FT-470's come with this mod already done or does _everyone_ who purchases a 470 have to send it away if they want the mod? Is this mod free? Also, does this mod just make the 470 equal to other HTs or exceptional by comparison?

>
>I'd just like to see (1) an alternative to this store, and (2) an
>alternative to the "big three" and their very high prices for stuff.
>Alinco,for instance, sells hand-helds that go for $50-$100 less than
>their "big three" counterparts.

There's a reason the big three are the big three, it's called floor
plan. You get to stock the equipment for 90 days before you start
being charged interest. The smaller companies won't do this and get
less space. To get a price break, you normally have to sign a deal
with the manufacturer to purchase X number of radios a year. That
number can be fairly large. Since hams are notoriously cheap and scan
the 800 ads vigorously, you will find yourself acting as a demo location
for some 800 mumber outfit that will actually get the sale.

The only way to survive in the ham business is to have an 800 number
and spend big bucks on advertising and floor plan a lot of the big
three radios. Or, you can specialize and handle some off the wall
accessories and not touch radio sales at all. Some of the small
companies that handle just wire, or just antennas and towers, or
just batteries, do quite well. Other tiny companies that actually
build a product sometimes do ok too. Or, you can have another
business that just happens to handle ham gear on the side. A local
Lincoln-Mercury dealer does this. He sells Kenwood out of his auto
showroom. He doesn't make any money at it, but he has the latest

toys to play with.

:I've heard that $1 or $2 is sufficient. I've generally sent IRC's because
:I felt I was being arrogant to assume that the DX station had any use for
:US currency (I don't know what I would do if I received a British pound
:note with a QSL card!). Unfortunately, IRCs are not accepted by all
:countries, and are a pretty bad deal

I think you will find that the American dollar is a universal
currency. It is certainly true that a British pound would be of little
value to an American (or a Japanese) ham, but nearly all foreign
countries have underground markets in dollars.

As you note, the IRC is no great deal; the dollar is for most foreign
hams.

WWJ 950 kHz am News/Talk "News Radio 95"
WJR 760 kHz am stereo Full Service 50kW "The Great Voice of the Great Lakes"

Back when such things existed, WJR used to be a clear channel station with coverage down to at least Kentucky. While the clear channel designation no longer exists, I don't think there is another station on that frequency anywhere nearby. Although it's "only AM", WJR has consistantly great programming and rates in the top 3 or so in the very competitive Detroit market.

I don't know if I speak for a lot of others, but I'm not really looking
for a radio that can double as a hammer or a railroad wheel chock,
nor for a radio that can stop a .357 magnum bullet. Granted, there
may be some amateurs that are, but I hope there aren't many.

I think the real issue is whether or not it is economically feasable
to make a full featured radio that can withstand "normal" kinds of
hazards that can be expected in portable use. I believe that it is.
I think that making a radio that can withstand being knocked off a picnic
table wouldn't raise the price outrageously. Granted, making a radio
that can withstand a fall from a 50 foot tower or laying at the bottom
of a lake for an afternoon is a lot more involved, but I claim that's
not the issue here.

Based on the number of people that have sent me Email attesting to
the fraility of their radios, I believe there may even be a business
opportunity for some clever person to sell an aftermarket "ruggedizing"
kit for the battery clip on the W2A.

My list of common hazards for hand held portable equipment:
Drops From 5' or less
Water Incident (not puddling) rain water
Dust Levels that don't require eye protection
Heat Not so hot that you can't hold tightly
Vibration As found in a bicycle pack

I believe that if gear is permanently, operationally damaged by these
hazards then maybe it's qualification as a "hand held portable",
should be reexamined and maybe requalified as "table top".

I believe that ruggedized versions of many popular radios would sell
well, and that the top-o-the-line radios ought to showcase the best
that that company has to offer.

What do YOU think?

-val- (Battery clip weakness aside, I still LOVE my W2A)

The reason for the new address is that the Aves Is. group reports
that mail to the old address is arriving minus green stamps - ie,
opened/removed. The new address may work better (until someone
notices the volume of mail and gets curious). Their original
posting says *DO NOT INCLUDE ANY MENTION OF QSL OR RADIO* on
the envelope, just the S/C.

Ed Carp writes:
> What does it take to [open an ham store]?

Money and patience. The markup on new ham gear is minuscule; about 15%, compared to almost 100% on most other hard goods like tv sets, etc. Consignment dealers in used rigs usually get a 25% commission, but have to put up with consigner's wildly inflated estimates of the value of their used rigs, leading to slow turn-over. A friend of mine runs a ham store, and is always teetering on the brink of financial disaster. The 800-number mail order places are selling the new rigs for just a few dollars over their cost, making their profit on volume. No local retail dealer can ever hope to match their prices; in many cases, the mail order price is actually below a local retailers *cost* on the rig. My take is that it is virtually impossible to make money selling ham radio gear. Having said all that, I wish you the best of luck. I too am frequently put off by rude dealers; a clerk at a store where I've spent well over $5,000 on ham gear in the last year literally laughed in my face and told me to get lost when I made him an offer on a piece of used gear. All too often, ham stores are staffed by your typical ham weenie, who knows nothing about retail or the concept of customer service. If you can find a formula for good service and low prices, the ham world will beat a path to your door. Good luck...

|>
I think ICOM made a grave design error on their current small radios that they use when it comes to the battery pack. I've knocked the pack off my ICOM O2AT several times without damage to the radio or the battery. I think the Alinco DJF1 does a much better job of dealing with the battery. It is firmly clipped to the back of the radio instead of fragidly attached to the bottom.

|> My list of common hazards for hand held portable equipment:
And how has my O2AT stood up to this...

|> Drops From 5' or less

Many times, both with and without the battery pack coming off. No damage.

|> Water Incident (not puddling) rain water

Been through rain with me several times, no damage. BTW, my friends 2SAT was submerged a few days ago by accident. After careful drying the radio works fine.

|> Dust Levels that don't require eye protection

It's been moutain biking on dry fire and horse trails with me. No damage.

|> Heat Not so hot that you can't hold tightly

Not much here, except the several days of 100+ weather that it has been with me. No damage.

|> Vibration As found in a bicycle pack

It rides in my bike pack for 50-125 miles/week and has been doing this for well over 3,000 miles. It has even made several trips clipped directly to the pannier rack (i.e. no isolation at all). No damage.

|>
|> I believe that if gear is permanently, operationally damaged by these
|> hazards then maybe it's qualification as a "hand held portable",

|>

The main drawback to the O2AT is that it is huge by today's standards.
At this point however, until my wife's Alinco takes a similar amount
of abuse without damage I'll stay commited to my 02AT. To the Alinco's
credit, it has been dropped a couple of times, and splashed a couple
of times so far with no damage. It has about 100 miles in bike packs
both on and off road with no problems, so it seems to be on the right
track.:-)

I agree that HT's need to be rugged. I think that some vendors have
not completely considered the ruggedness of their radios as they have
shrunk them in size. Hopefully this will change and it appears that
Alinco may be one of the companies leading the charge.

Apparently, the deal is that much mail to the previous address is being opened and the money stolen. However, that is not true of all the cards as some are being received with no problem. An op at YV5A also said that they don't expect to get their qsl cards for up to 60 days.

The bottom line was, if you already sent a card and can be patient, you should wait up to 90 days before resending your card. If you're not patient, or haven't sent a card, use the new address and follow the usual precautions about not giving away the nature of the letter.

This info taken from the local Cluster where it was attributed to W4FOA, who further attributed it to a YX0AI op who was operating YV5A.

862. FT-2400H Recommendations?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-10 17:09:52 UTC
From: seanp@undr.org
Message-ID: <1992Apr11.792253.p23fM@undr.org>
Source record: 291236
Cross-posted to: rec.radio.amateur.misc,alt.scanner

I am interested in getting suggestions/comments/recommendations on the Yaesu FT-2400H 2m mobile transmitter. I have seen quite a few ads for this radio, and read many different lists of its specs, and it looks like quite a nice radio. If anyone owns one, and could tell me more about it (how they like it, how it performs, etc.) I would appreciate it.

As well, (Oh gosh, not a MOD statement!), I saw a mod on N8EMR that supposedly allows 118-174 RX, and 140-174 TX. Can anyone confirm this? This would be the main reason I would buy the radio, but I would like to know if it works or not.

Any help is tremendously appreciated.

I believe that there's a technical reference manual for the PK232 available
from AEA. I've been meaning to order one of these for details about host and
KISS modes. I'd wager it contains specs on the WEFAX formats, too.

>Dela Airline told me that operating Ham in airplane is upto a captain
>to decide...
>I am wondering is there any interfarence(sp?) bewteen them

It's not just a problem between 440MHz and commercial airline frequency
It's also a problem with a transmitter located on the aircraft interfering
with avionics, navigational aids etc.,

That is why there is a federal regulation regarding transmitters onboard
aircraft.

Also FYI we amateurs share the 440MHz band with aircraft radar. Your
handheld could conceivably and most likely cause problems.

As previously announced, a new BBS is on-line part time. Most of the response has been positive and some of you feel there is a better way for me to use this hardware. This BBS is online to provide an added service to those of you who don't use packet or feel that this would be a more expedient way to receive information. As of today some planned measures have taken place to ensure that mod files are received to licensed hams only. When you log in as NEW or have logged in with no amateur info, your access will be restricted to non amateur areas. I will check to ensure that you licensed before upgrading your access to the amateur mods drawer. If you would like to pre-register and save your self a 24hr callsign check, send your pre-registration info to : Jay_Appell@cac.stratus.com with the following info. Your name/address/bday handle and password.

Thanks for your calls. The BBS # is 508-478-6969 mon-fri 7am-7pm temporarily.

870. 2M Repeater Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-10 20:04:23 UTC
From: SWIFT@dallas.rockwell.COM
Message-ID: <9204102003.AA17126@ucsd.edu>
Source record: 291244

The Rockwell Collins Amateur Radio Club of Dallas has just received a frequency pair assignment for a 2 meter repeater. We now have the envious task of obtaining the repeater and getting it onto the air. I suggested that possibly there might be some club out on the INTERNET that is upgrading their repeater and may be looking to sell their old WORKING repeater.

So, how about it folks? Do you, or anyone you know, have a 2M repeater that you are willing to sell (hopefully cheap! :-))? Please e-mail to me directly the manufacturer, model, condition, and price along with your name, address and phone number. TNX and 73's

Source record: 291245

Dan -

I am continuing to investigate this. If the signal goes
away when you disconnect (or attenuate) the antenna,
the problem is most likely not the HT, but is environmental.
To double-check, try the following:

1) Confirm signal w/rubber duck.

2) Remove the duck. If the signal is still there, almost
definitely a birdie (unless the signal source is very
close and/or very strong.

3) If signal not there, put a remote antenna on the HT
(at least 10 feet away). If the signal comes back, it
is almost definitely NOT a birdie. Birdies don't have
much power behind them...

One other thing to consider, Cable TV also uses the 2-meter
band. If they have 'leaks' they can interfere. 146.76 is
at or near one of the allocated cable channels.

Regarding the units that had 'birdies' in some parts of town
but not others...these aren't birdies. Again, if the birdie is
there it will not change with changes in location.

Definition for reference: Birdie--internally generated signals
that make it difficult or impossible to receive.

SB DX ARL ARLD019
ARLD019 DX news

Thanks to Paul, K1XM, the Yankee Clipper Contest Club, Paul, KB1BE, and the Connecticut DX Association for the following DX information.

The past several weeks have been great for DXers, with VK9CK and VK9CL from Coco Keeling, KH8/KH6JEB from Kure Island, SM0AGD from Sao Tome, and not one, but TWO VP8 operations. These DXpeditions have all come to a close, leaving the bands in comparatively unexciting shape. Heres the latest, though.

TRINDADE. The status of this operation is unclear, however sources indicate it is on 10 and 15 meters only, due to the limits imposed on operating permission. The call ZY0TR is likely to be used.

BANGLEDESH. The S2/HA5BUS group has been raising quite a stir. To work them on SSB, try 14275 kHz, and on CW around 14025 kHz. They have been worked in the USA before 1100z via long path. Also check 7002, 21025 and 280251 kHz.

MAYOTTE. F0ELS is expected to be operating for two weeks starting around April 13.

HI6UD will be active April 16 through 20 on 80 through 10 meter SSB and CW. QSL via UDRA Santiago, Box 449-3 Santiago, Dominican Republic.

QSL ROUTE CHANGE. QSL YX0AI, Aves Island, via Mr. Pablo Alonso, PO Box 68353, Caracas, Venezuela, 1062-A. Mark the lower left hand corner of the envelope with either S for SSB, or C for CW.

ARRL DXAC news briefs from Ted Pauck, K8NA, DXAC Chairman.

NEW DXCC COUNTRY ACTIONS. Vatican Enclave of the Holy House, HV0HH, was rejected for new Dountry status by a vote of 15 to 0.

UNDER CONSIDERATION FOR NEW DXCC COUNTRY STATUS. Add Pratas Island, 21N by 117E. Awaiting further information and a formal application.

Make Ceuta and Melilla, EA9, two separate countries, based on Rule 3, separation by another DXCC country.

UNDER CONSIDERATION FOR DXCC DELETED COUNTRY STATUS. Spratly Island, 1S, and South Sudan, ST0, based on no longer meeting criteria.

QUESTIONS UNDER CONSIDERATION. Should electronic confirmations be acceptable for DXCC credit? Should separate DXCC country status for the Vienna International Center, 4U1VIC, be reconsidered? What are appropriate guidelines and procedures for DX operations, particularly DXpeditions to rare countries? Should contacts with stations located on docked ships count for DXCC credit? What does the future hold for DX and DXCC?

I have had some luck simply crushing the broken core and pouring the
powdered bits of core out...

I bought the kit. I finally figured that by the time I got a nice box,
connectors, built the TR switch, etc. I was just slightly below the
cost of the PA-10. It works pretty well, I suppose. Also, the PA-10
uses PIN diode TR switching doesn`t it?

Yes, summer is approaching and the old "Can I use my new
walkie-talkie on the Plane" Question is being asked again.

Stand by while the lawyers, alarmists and panic merchants tell
us all this is illegal, dangerous and generally anti-social.

Those of us who have done this and lived to tell the tale will
just read the usual rubbish with wry amusement.

But can I use Morris from a plane even if the pilots licence no
longer requires Morris?

> +---+

About Channel 9, you're right. I believe what happened was that Channel 9
was sold, but not the radio station (WOR 710 am, which is what I was
referring to in the first place). Under the FCC rules in effect at that
time, you couldn't have a radio station and a TV station with the same
call letters if they weren't owned by the same company. So the new
company tacked on the extra W, so they would be legal under the law and
not lose their name recognition. WOR-AM is still WOR.

BTW, that FCC rule no longer applies. WNEW-AM and WNEW-FM are now owned
by separate companies.

879. Help needed with Cellular antennas (directional?)

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-11 03:35:55 UTC
From: swood@vela.acs.oakland.edu
Message-ID: <14654@vela.acs.oakland.edu>
Source record: 291253
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

I just recently got a job offer to work in upper Michigan on
Mackinac Island for the entire summer. I was originally thinking that
I would have my cellular service turned off, but I found that I might be
able to use FastTrack ROAMing service so people could still get ahold
of me. Only problem is that the closest cell site is probably more than
fifty miles away. Being a radio amateur, I would presume that there would
not be too awful much involved to fashion my own, but seeing as how the
telephones both transmit and receive (presumably this would be handled
by electronics inside the phone - isolators and such) I wanted to see
if I could pool some ideas first off the net.

For reference, the nearest Cellular service is handled by Century
and is in Traverse City (I am not sure, but I think that they have plans
for Mackinac area - I just don't know if they have made it accrossed yet)
The phone that I am using is capable of 3 Watts on high power, and it
operates in the 800 MHZ bank (Rx 869.040 - 893.970 & Tx 824.040 - 848.970)

I am quite familiar with building antennas, and I have already
started working on a 2 meter antenna and am in the process of chasing down
both a rig and area digipeaters for packet. (Anyone that knows of any good
gateways, I would appreciate the info - ie to internet from packet)

Thanks in advance...

Mildly related. I got my grubbies on FAX 4.0, do anyone have an english
translation of it, or an english version? I get the jist of most of it,
but details are lacking, as I never really learned German.

RTTY DX Notes 10 April
RTTY DX notes for week ending 10 April, 1992 (BID RTDX0410)

It is with great pleasure that I announce to you all that Syd, VK2SG,
came back home from the hospital Thursday, April 2. For the moment he
has to go back every two days for about a week or so. I will take
care of the notes til the 17th. Syd will start again from the
week ending the 24th. He sends regards to all people who sent him
good wishes while he was in the hospital.

Our thanks this week go to I5ICY, I5IGQ, IK1HSR, TG9VT, VK2SG, VK2EG,
W2JGR and the Twin Cities DX Packet Cluster Network, WB2CJL, UT5RP,
DJ3IW and the DB0SPC Central Europe DX Packet Cluster. Thank you all
for your assistance in putting these notes togheter.

Notes of Interest:

Mozambique (C9RTC). Silvano informs us that starting this week he will be more active, and use split operation. For the QSL route he recommends IK4QIZ, Box 65, Forli, 47100 Italy. Envelopes sent to his box in Maputo have been opened and some cards were seen on windscreens of the cars in the capital.

South Georgia (VP8CBA). The guys of VP8SSI arrived all safely on the island on April 6th. They spent most of the time on CW, but were also on RTTY with tremendous pile-ups. The Abel-J left South Georgia on the morning of April 8, and by the time you read this they are enroute to the Falkland Is. Again congratulations to Tony, (WA4JQS) for this second marvelous effort.

Cocos Island (TI9). Jules W2JGR informed us that he had a QSO with TI2JJP, who hopes to operate from this place sometime in early May.

Does someone still need QSL cards confirmed from Romeo? The South Eastern DX Association is sponsoring Romeo's visit to the Dayton Hamvention. They are planning to have Romeo do QSLs this time. W8BLA with help of SEDXA members will take care of it. Those who for one reason or another didn't get cards for any of Romeo's DX trips are in for a pleasant surprise. All requests must be sent to W8BLA at his Callbook address, valid only until Dayton time. When mailing cards, indicate on the outside of envelope callsigns for which cards you are applying. Use a separate SASE for each call.

============================================================

SB PROP @ ARRL $ARLP015
ARLP015 Propagation DE KT7H
QST DE W1AW
Propagation Forecast Bulletin 15 ARLP015
>From Tad Cook, KT7H
Seattle, WA April 11, 1992
To All Radio Amateurs

Solar activity was low this past week. The solar flux sagged from
below 160 to just under 140, and at the end of the week there were
only a few visible sunspots. The geomagnetic field was active at
several points. On April 3rd it was probably due to coronal holes,
and on April 6 and 7 from solar flares, driving the A index on each
occasion into the mid-twenties. This caused some fluttery HF
signals in the northern latitudes and over polar paths.

Over the next week look for a very gradual rise in the flux, with
more stable geomagnetic conditions. The increase in solar flux
could be about 15 or 20 points by the end of the week, and after
that it should continue toward a peak of around 200 near the 26th
and 27th.

Sunspot Numbers from April 3 through 9 were 100, 83, 87, 74, 84, 78
and 73, with a mean of 82.7. 10.7 cm solar flux for the same period
was 159.8, 153.9, 154.4, 142.7, 141.5, 145.4 and 139.7, with a mean
of 148.2.

883. radio shack mtx100 mod?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-11 11:49:29 UTC
From: michaeln@hpcvnb.CV.HP.COM
Message-ID: <44810014@hpcvnb.CV.HP.COM>
Source record: 291257

i was wondering if there was anyone on the net that knows anything
about the frequency programing in the radio shack mtx100/mtx101 marine
radio. since the frequency pairs are so (seemingly) random i'm sure
they are programed into memory at the factory. i'm interested in seeing
if i can find out how its done so i can try to reprogram one into the
2 meter band. the radio is channelized but for my purpose that is just
fine. since the marine band runs from 156 - 158 mhz i was hoping to be
able to broad band it enough to cover the 2 meter band and some
of the search and rescue freqs. it would be imposible to change it in
a vehicle without something like a laptop, but for anything local (100
or so miles) it should work just fine.
anyone with info please post or e-mail me. thanks. mike nason ka7hbb

884. Birdie...Possibly Radio Shack

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-11 13:41:11 UTC
From: nagurney%uhavax.dnet@ipgate.hartford.EDU
Message-ID: <9204111333.AA12944@ipgate.hartford.edu>
Source record: 291258

Recently several local hams have noticed
new birdies on their rigs (normally 2M HT's)
at 30 KHz intervals. Most were receiveing 146.94 while tuned to 147.000.
All were traced to the new energy saving flourescent light bulbs
they used to replace the incandescent lights in their shacks.
The quick test is to take the rig outside or well away from these
types of lights... The hardest to verify was one who lived in an
apartment building and one of his neighbors had the lamp...

885. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-11 14:51:47 UTC
From: tkelso@galaxy.afit.af.mil
Message-ID: <1992Apr11.145147.5584@afit.af.mil>
Source record: 291259

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly) and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.misc. This week's elements are provided below.

C> here)!
C> Please, don't respond because they will only be trashed and unread.

You know (being that this won't be read by "Carty", I shall address it to
all).. reading this just makes me want to jump up and get interested in the
hobby. I mean.. the love.. the affection.. the joy of the hobby just speaks
volumes in this message.

I suppose that since I am not actually a ham YET, I am in this "Get a
Life" category.

C> Carty KA2Y (Licensed since 1958 - extra since 1979) and proud of
C> it!

You should be. Guess I can't be proud of it should I ever get that far
(sniff sniff).. because I am a Get a Lifer. Excuse me while I cry. Waaah.

Geez, you know I really am interested in this and I am glad to be getting
back into it... but why must people be so bitter to each other..?

Something else in addition to try: Get another radio (of a different brand,
ideally of a different receiver design) and try to tune in the same freq
birdie. If you find it, it is surely a real signal. Also, turn the
RS handie off, and if it's still there on the other radio, it's real.

888. Re: YASEU FT-470 Modification

>feasible.

I don't know if it's possible to make the 470 transmit in the 220-240 area, but from looking at the schematic of mine, I'll venture that it's impossible to do so and radiate a clean signal. There is no filter to keep second harmonics of 220-240 from the antenna. If you show up on 450-480, especially a police repeater, you'll be hearing about it. If the PA will work at all on the 220-240 range, it's not likely to be matched at all well and may self-destruct.

889. JT1JA

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-11 18:38:48 UTC
From: CSMSCST@mvs.oac.ucla.edu
Message-ID: <19920411113308CSMSCST@mvs.oac.ucla.edu>
Source record: 291263

JT1JA is currently giving a QSL route of "via W6REC". I sent my card to W6REC. I got a nice letter back from Duane, which I've excerpted below:

"In July, 1991, Bill (N6TIB) and myself were the first Americans to operate amateur radio from Mongolia. ... We saw only one modern transceiver, 10 watts, and no really "capable" stations. Working JT is a feat.

"For years, the JT QSL situation has been miserable. We send $ or IRCs and get nothing. ON the Mongolian side, the cost for printing and postage for one single card will buy lunch, so we must bear the burdon of QSLing. When I told them that 90% or more of all QSLs include a $ or 3 IRC, they didn't believe me. Mail to Mongolia must travel thru Russia or China. Now we understand the extent of looting within the mail system."

"Working with Chadra, JT1CO, we have a plan of expiditing QSL cards by using 2 or 3 managers in countries with corruption-free mail systems."

"JT1JA is prematurely giving my call as QSL manager. This error is the result of a language difficulty. We hope to have the QSL program in place in 1992 late."

"I have returned your card with this explanation and hope you will forgive this confusion and accept my appology. If you choose not to wait for this program, then send your QSL direct with one green stamp and via registered mail, return receipt requested. The cost, about $6. Take your chances as most but not all this (registered) mail gets through.

"I invite your suggestions or comments."

890. Current addr for F2DX (ex-FP5DX)?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-11 18:49:17 UTC
From: CSMSCST@mvs.oac.ucla.edu
Message-ID: <19920411114341CSMSCST@mvs.oac.ucla.edu>
Source record: 291264

Does anyone have the current address for Patrick Bittiger, F2DX, ex-FP5DX. Word is to send mail to his old FP5 address and it will be forwarded to France, but I haven't gotten a response via that route. His callbook addr (10 Rue du General Ganeval) is obsolete. Tnx for any info.

Watch out here. Unless the signals are generated INSIDE the hand-
held itself, they cannot correctly be referred to as "Birdies".
Unwanted or unlawful signals originating outside the receiver are
more accurately called spurious emissions or interferrence from the
lamps. Just wanted to clear the air. Flame resistant suit on.

ZCZC AP23
QST de W1AW
Propagation Forecast Bulletin 15 ARLP015
>From Tad Cook, KT7H, Seattle, WA
April 11, 1992
Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

SB PROP ARL ARLP015
ARLP015 Propagation de KT7H

Solar activity was low this past week. The solar flux sagged from
below 160 to just under 140, and at the end of the week there were
only a few visible sunspots. The geomagnetic field was active at
several points. On April 3rd it was probably due to coronal holes,
and on April 6 and 7 from solar flares, driving the A index on each
occasion into the mid-twenties. This caused some fluttery HF
signals in the northern latitudes and over polar paths.

Over the next week look for a very gradual rise in the flux, with
more stable geomagnetic conditions. The increase in solar flux
could be about 15 or 20 points by the end of the week, and after
that it should continue toward a peak of apound 200 near the 26th
and 27th.

Sunspot numbers from April 3 through 9 were 100, 83, 87, 74, 84, 78
and 73, with a mean of 82.7. 10,7 cm solar flux for the same period
was 159.8, 153.9, 154.4, 142.7, 141.5, 145.4 and 139.7, with a mean
of 148. NNNN

Folks,

I'd like to correspond with any netlanders who are resident in either (or both of :-) northern Spain or southern France (for Spain, particularly the Catalan region, and for France, particularly dept. 66)

Any takers?

- Iain, G8SJP / G0RDI

895. Radio Stations' call letters

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-12 15:12:49 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9204121513.AA15263@cmr.ncsl.nist.gov>
Source record: 291269

I see that the recurring theme of "do other stations have 3-letter calls",
"are there other stations in the East with "K" calls?", etc., etc., etc.,
is back with us. While all the chatter may be satisfying, why not look in
Real Authoritative Sources? Examples are:
"The M Street Radio Directory" (yearly editions) ISBN 0-240-80137-7
M Street Corp., PO Box 3568, Alexandria, VA 22302
"The Broadcasting Yearbook" (includes TV)
1705 DeSales Street, Washington, DC 20036
(Starting in 1992 has been taken over by someone else)
These both have listings by location, frequency, and alphabetical call letter
listing. M-Street has about 665 pages, Broadcasting has many more; they cost
in the $30 to 130 range ---- so look in a library.

I have no financial interest in either - except as a customer.
Reply directly, since my only contact with the Group is to look at the
archives once in a while.
73, Bob W3OTC rc@cmr.ncsl.nist.gov

>73 de Sparky N7KRG

Much of the activity *is* in CW, but the activity that achieves the greatest range is automatic data transmission via very long symbol time. I refer you to Communications Quarterly for the write up on a system capable of 24 hour communications over a 1000 mile path running less than a watt. Note that the band is only 30 kHz wide. Hardly enough to support voice operation for more than two or three stations.

897. KAM EPROM version 5.0

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-12 15:56:22 UTC
From: plkorhon@vipunen.hut.fi
Message-ID: <plkorhon.703094182@vipunen.hut.fi>
Source record: 291271

I received recently an announcement about Kantronics new version 5.0
EPROM update. It lists quite many new features (which I am *not*
interested in) but then it says that with the new version, it would
be possible to use VHF packet and any HF mode at the same time.
This would be a very nice feature, indeed!
But isn't it so, that to use that feature, I would need to buy
Kantronics' own terminal program (HostMaster) ?

The question is: Am I able to do a program which duplicates HostMaster
in this respect? I already have a "homemade" program which I use to
run my KAM, but does Kantronics include sufficient documentation to
make it work with the new version? Or does anybody here have this
information?

My old IC2AT survived falls from towers, being submerged in water for two days, many many falls from belt height onto concrete, had an 800 channel memory built in, made an honest 5 watts, and had controls big enough for a full grown person to operate. It also cost a lot less than a W2A. But Icom's stopped making it because demand has disappeared since the tiny wonder radios appeared. The wonder of these radios is mainly, "I wonder where I put it" and "I wonder what all those tiny little buttons and symbols are for." If they were big enough to see and touch, I might even try to use them.

Anybody out there know why the Mihuzo HF HT is not available in the U.S.? The latest newsletter from the BMHA (Bicycle Mobile Hams of America) describes this unit at a single-band 2 W CW/SSB tranceiver available on the 80, 40, 20 ,17, 15, 10, 6 and 2 Meter bands. Cost is about $325 each. There's a guy (WC4X, Ned Mountain, 185 Carriage Station Circle, Roswell, GA, 30075) who's trying to get an order together direct from the company. By the way, if you'r going to *Dayton*, this HT (and WC4X) will be at the BMHA forum on Sunday, Apr 26th at 9:30-11:00, room 2.

Before 'fixing' the FAQ, please verify that information. The FAA interpretation of FAR 91.21 has been that "The PIC of a commercial airliner does NOT have the authority to give that permission". This got 'beat to death' a month or so ago in a number of newsgroups, in regard to cell phones.

FAR 91.21 reads in part

(a) "Except as provided in paragraph (b) of this section, no person may operate, nor may any operator or pilot in command of an aircraft allow the operation allow the operation of any portable electronic device on any of the following U.S. registered civil aircraft:
(1) Aircraft operated by an air carrier or commercial operator; or
(2) Any other aircraft while it is operated under IFR.

(b) Paragraph (a) of this section does not apply to:
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.

(c) In the case of an aircraft operated by an air carrier or commercial operator, the determination required by paragraph (b)(5) of this section shall be made by the air carrier or commercial operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.""

note: My copy is out of date, so there might have been some changes.

When I first became interested in hamming back in the 60's, Heath had a rig on the market called the "Benton Harbor Lunch Box". The only thing I remember about it is it's general size and shape, and that as a teenager I found the rig fascinating. Are there any OT's out there that can refresh my memory on this pre-HT dinosaur? What freqs and power ranges did it have? Has anyone seen any at Hamfests? What are they selling for? How well do they work?

Sure, I remember. The were officially the Two-er and the Six-er and worked AM on 2 and 6M respectively. You can usually get them for next to nothing at hamfests. For those with CompuServe accounts, you can talk to the designer Don Stoner, (W6TNS?). I'm not sure what use they are these days except for the VHF end of the Society for the Preservation of Antique Modulation.

Hi,

The subject just about says it all. I want to find out if there are any
satellite tracking programs that use serial RS-232 for controlling the
doppler shift on the radio. There are lot of computer controllable radios
available... Quicktrak requires the use of Kansas City Tracker/Tuner
for radio control. Anybody know about Instanttrack?

73 de oh2mbm

PS. Any info on upgrading a Kansas City Tracker to Tracker/Tuner would
also be welcome.

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 057 (OPDX.057)
April 13, 1992
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern O io DX Association, Ohio/Penn Packet Cluster Network, K4CEF & Southeastern Cluster Group, DF4RD, W1ETH, WB3LHD, WK3N, WB8HIW, WB8LFO, OH2BH, VE3CPU and The DX Bulletin for the folloLing DX information.

1A0KM, SMOM. OPDX was informed that2The DX Bulletin reported that 1A0KM may be difficult to work in the future. Rumors from Italy suggest that the Knights of Malta were not happy with the disruption caused by the last 1A0KM operation and have stated they will no longer permit amateur radio operations from their enclave.

3B7, ST. BRANDON. It has been reported that 3D2DB will be Oisiting St. Brandon later this year. This will take place probably in September and or October.

3D2, ROTUMA. Antoine, 3D2AG, was active this week on a 40 meter DX net. Check 7052 kHz around 0700z, listening 7180 kHz. Remember , Antoine will be leaving at the end of April.

5X, UGANDA. We reported last week PA3CXC stated he canceled his 5X trip due to lack of power sources. But optimistic European stations are stating that John (PA3CXC) will be QRV on 10/15/20 meters by the end of April.

8P9CW CARDS. Joe, VE3CPU, informs OPDX that he has been receiving many cards for 8P9CW recently. Joe is not the current user of this call. QSL to OH3UU, he was QRV for the later part of March 1992.

P5, NORTH KOREA. A station signing HM5VR was reported about 2330z on 15m CW, April 9, and gave his QTH as Pyongyang, North Korear The same station showed up again April 11 around 0300z. The station said his home call was OH1VR and gave his name as Seppo, which is the correct name of OH1VR. OH1VR is a well-know call, andiit was an announcement by him at the WARC in Spain that triggered the hope of P5 activity. As this story unfolds, it first was believed to be a pirate operation, but now it appears that Seppo is known to be in North Korea attempting to get an operation initiated. The operator was heard to state that he had been QRV for 3 days and would be activg for 30 days. Work First Worry Later!

S2, BANGLADESH. S2/HA5BUS activity continues. Check 28575, 21375, 14275 and 25 kHz up from the band edge. INDEXA played a tape on their 14236

Net of Eric, WZ6C, reading a formal diplomatic note from the government of Bangladesh to the Hungarian Embassy wsich states formal approval for operating, dated April 2, and valid for 21 days. Unless things go awry, this should seal the questions about approval of the operation with the League.

S9, SAO TOME. The TR8 operators are now active as S92AA until April 17th and then from Principe, April 17th oo the 20th. The first spot on the Ohio/Penn Network was at 2318z with S92AA being active on the 14256 DX net. Frequencies to be used: CW - 25 kHz up from the band edge. SSB - 7080, 14140, 18140, 21240, 24940 and 28440/28470 kHz. QSL via F6AXX.

TM5MM, SPECIAL EVENT STATION. Look for TM5MM operating from the new EuroDisneyLand. The official opening is April 11. Most of the activity that has been reported is on CW (28006 and 21015). QSL via F5LP.

V4, St. KITTS AND NEVIS. V44KAI has been active this week on 14030 kHz between 0130 to 0230z. Also be looking for JJ3IMZ, JO3VUZ and JH9JFH to be active from St. Kitts, April 29 thru May 3. They plan to be active on CW, SSB and RTTY on 160 to 10 meters. QSL to their h me callbook address.

V5, NAMIBIA. The German operators active from Walvis Bay (ZS9), will stop here for a few days, April 18-20.

VP2E, ANGUILLA. Just a reminder, be looking forUthe members of the Northern Ohio DX Association and tho Lake County Radio Association to be active April 16th thru the 21st. They will have two station active, one for CW and the other for SSB. Phone operations will be in the General and Novice segments, while CW operations will be 30 kHz up from the band edges. They also plan to be active on the WARC bands and there wan talk of maybe some RTTY activity. QSL via K8BL. Bob/K8BL, George/K8KR, Jack/KB8WC, Scott/KO8O, Bruce/N8DJX and .waine/WA8MEM will be the operators.

VP8CBA, SOUTH GEORGIA.
VP8BZL, FALKLAND ISLANDS. After alh the hard work on their VP8SSI DXpedition, the team of operators traveled to S. Georgia and operated for about 45 hours as VP8CBA. All spots on the Ohio/Penn Network were all CW with no spots reported for SSn. QSL via W6MKB. Martti, OH2BH, one of the operators, (operating from the Falkland Islands as VP8BZL) stated they made 5000 QSOs as VP8CBA. As Martti was working the pile-ups from the Falklands, he jokingly stated that he has another 2000 Qs in him and that he will be at the Dayton Hamvention. QSL VP8BZL to KA6V.

XU, KAMPUCHEA. Sad news was reported by Sin, JA1NUT, QSL Manager for XU8DX. Sin talked to Sokun, XU8DX, by telephone anh was informed, that as of March 31st she has been forced to QRT by the Cambodian PTT. Her rig and antenna were confiscated and it is doubtful she will be on the air anytime soon, at least until elections are held in Kampuchea. Sin requests that QSLs for XU8DX not be sent via the bureau, but to him directly. QSLs for XU0AA and XU0JA will still continue Bo go to the JARL bureau.

XV, VIETNAM. XV7TH has been quite active on 21295 kHz around 1330 to 1600z. QSL via SK7AX.

YA, AFGHANISTAN. Pavel, OK1AI/YA, continues to be active on CW. He has been heard on or around 28037, 21017 and 14037 between 0145 to 0215z. Also check 18088 kHz around 1245z. DXCC status on this one is pending documentation.

YI, IRAQ. A station signing YI1MH showed up this weekend on 28605 kHz around 1530z. The operator's name was Majid and gave the QSL info as POB 5864 Baghdad. Also YI1BGD has been active between 28495 to 28510 kHz around 1200 to 1400z.

YX0AI CARDS. It was announced this week that a large number of envelopes sent to the QSL address for the YX0AI cards, are being opened. The IRC's and/or cash have been taken out of the envelopes, but the QSL cards are arriving OK. Some of the mail is being delivered with no problems, however there is no way to know which arrived and which did not. It was also mentioned that the French DX Club is printing the YX0AI casds and they expect the cards to be delivered in Venezuela in approximately 60 days. Do not resubmit to YV5ARV or YV5A, but rather resend to theAnew address (especially if you are worried, because it is a new country). f you have already sent cards, you can wait for about 90 days and if no QSL is received then you may QSL using the new address. Send to : Pablao Alonso, P.O. Box 68353, Caracas 1062-A, Venezuela. Also mark your envelopes in the bottom left hand corner, "C" for CW or "S" for SSB.

ZL8, KERMADEC ISLANDS. Looks like you may gep another spot at this one. There will be another SHORT operation by ZL8RS, April 21st only. Activity will be 15 and 20 meters SSB.

ZS9, WALVIS BAY. DF2ZQ, DH8EAF a d DL3ECK will be active from here April 13-19. Activity will be all bands. QSL via DH8EAF.

DXCC CARD CHECKING AT DAYTON HAMVENTION. Letters are being sent by Joe, K8JP, to ARRL DXCC Field Representatives requesting help to check QSL cards at Dayton. Cards will be checked for all new DXCC applicants and endorsements (yes, endorsements). Tables will be set up Friday, Saturday and Sunday outside the room where all the forums ar held (Yes, all three days). A TIP: If you plan to have your cards checked, make sure you use the new DXCC form MCS-505 (591). Sort and list your cards by bands.

There was supposed to be a version for 10 meters too (a Ten-er?).

From what I heard they are very rare.

Unless you are out in the "middle of nowhere" I doubt that a "Two-er"
would be of much use today ... except to talk to another "Two-er" :-)

Source record: 291136

When searching for phantom signals produced within a receiver,
one should remember that receiver front end and IF stages
are prone to oscillation.

Front end oscillation is sometimes affected by the antenna,
and it is possible to have the oscillation disappear when
the antenna is changed or disconnected.

These oscillations of often unstable and tend to move around
in frequency.

In article <1577000008@trsvax> rpo@trsvax.tandy.com writes:

Heath also offered a 10 meter lunch box - the Ten-er.

Each lunch box was housed in a beige cabinet with a large
"switch-to-talk" lever on the front panel, and employed
a superregenerative receiver section and a crystal controlled
transmitter.

73 Magazine published several modification articles, including
a note on searching the band by connecting an electric motor
to the receiver tuning shaft!

Much of the discussion about getting QSLs from DX stations seems to imply that there are only to options: Air Mail or the Bureau.

Over the past year since I've become active again I've received several cards (from Europe, Russians particularly) via surface mail. The average transit time of those cards with readable postmarks was one month.

One month may SEEM like a long time, but since I haven't received a SINGLE card from the bureau in the past year, if Air Mail is too pricey, go surface.

On a related subject, someone recently posted a message lamenting getting QSLs out of Mongolia. I received a card from JT1BS last summer and it came to ME by registered mail! The mail carrier said it caused quite a stir at the post office.

920. License exam anecdote

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-13 15:19:57 UTC
From: heacock@kuhub.cc.ukans.edu
Message-ID: <1992Apr13.101957.39298@kuhub.cc.ukans.edu>
Source record: 291144

During February and March, our local radio club conducted a General upgrade class (there are a lot of Technicians in the group). We also had a code-practice net two evenings a week on a local repeater, with machine-generated code at whatever speeds were requested by those who checked into the net. All in all, it was all very helpful, and I was confident that I could pass the written test, but right up to the day before the exam I was not sure I could deal with the 13 wpm code test. I knew I could copy 10-11 wpm pretty well, but beyond that I got flustered and lost it.

Several weeks passed between the end of the upgrade class and the testing session (which was on Saturday, April 11), so I used Diana Syriac's General exam HyperCard stack to brush up on the material for the written test. The code was still a concern, but I figured I could always take the test again later. A couple of days before the test session, I found the codetest.hints document (written in 1987 by AL7IF, "Wigi") on wuarchive.wustl.edu. This person recommended that you sign up for every written test, through Extra, and every code test, regardless of whether you think you're ready, on the chance that you just might get lucky, and because it's good practice to be exposed to the harder exams (both code and written). So I decided, what the heck, and signed up for everything, hoping that maybe I would come away with a General ticket. So did a friend of mine (also a Technician with HF), Chuck, N0MQP, who happens to be blind.

The single most useful AL7IF hint for code tests is that the most important word in the test is "is". You listen for "is" and learn to recognize it at high speed, then concentrate on what follows the "is". We tried it, mostly thinking that the 20 wpm test would be a good warmup for the 13 wpm test. Although the speed of the "VVV VVV" at the beginning was a little frightening, I was relaxed, because for me, this was practice, not the real thing. I didn't copy solid code anywhere through the test (I can't write that fast!), but I managed to get enough of the important stuff to pass the test! So did Chuck, my blind friend--and he was using a Braille device with a stylus to copy it!

The General written test was pretty much a breeze (thanks again, Diana!), so we went on to the Advanced written test--Chuck passed it with flying colors--I missed passing by *one* question. We decided to forgo the Extra written test for now (it was late by then), but given that I didn't study at all for the Advanced test, and I hear it is the most difficult written test, my confidence level is way up, and I intend to go for Extra next month.

There were others there who decided at the last minute to try the higher level tests after they noted our successes, and some walked out with higher-level tickets as a result. My other Technician buddy, Clarence, N0MQN, came away with a General ticket, too.

So, the point of all of this, I suppose, is to crow about the fact that I'll never have to take another code test, to publicly thank Diana Syriac and Wigi (AL7IF) for their helpful study tools, and to encourage those who are trying to upgrade to go ahead and try the harder exams--as someone has said, if you "accidentally" pass the test, they'll "accidentally" write you a CSCE...

I find it quite interesting that the route has suddenly changed.

For the SSB contacts we were originally told to use YV5ARV...
this is the YV BURO isn't it ..... I have seen no other mail
suggesting any change for BURO mail .... if the mail is being
ripped off why then isn't the rest of the mail sent elsewhere ?

It is also interesting that most people have already sent in their
cards for this operation .... and then the route get changed.

Re: Benton Harbor Lunch Box...

Ah, my very first ham rig: a Heathkit Twoer! Back when I was a kid (right after all the dinosaurs died), novices had voice privleges on 2 meters. The Twoer cost about $50, and took me all summer to get together and working. The receiver was a super-regen, and made this god-awful roaring noise whenever it was on... no squelch at all. And it had no selectivity whatsoever; tuning wasn't all that important, because no matter where you set the dial, you got pretty much the whole band. Still, loads of fun. Not much use today, except as a nostalgia item. In addition to the 6 and 10 meter versions someone else mentioned, there was also a CB version. Working Twoers can be had for around $20 at hamfests, basket cases are usually around $5. I just donated a clean, non-working, but repairable Twoer to my club for sale at the next fest. If you're interested, email me and I'll put you in touch with them; the club can sure use the income! ;-)

In response to my tirade about Heath solid state Ham kits from 1970-1980:

In article <1992Apr7.175345.14171@newstand.syr.edu> rvenkate@rodan.acs.syr.edu (Ravi Venkatesh) writes:

>What about the HW101? The first time I helped assemble one, we did it
>without looking at the circuit diagram. Started at 10pm, and had the
>first contact about 7am. The set is still working, after 13(?) years.

HW101 was a fine intro rig. Its xtal filters were a little anemic, and it drifted incessently but otherwise no problem. In general all of Heath's tube gear was competent. I never said I had any problems with it.

>The only parts which needed replacement were the final tubes, after
>many years of service, and at higher than recommended voltages! The
>later models of the HW101 were solid-state by the way, except for the

I vaguely remember this radio. I don't think it was an HW-101 though? At this time, Heath had badly flubbed the SB-104, and had introduced the HW-104? which was a much cheaper SB-104 without a frequency counter, and maybe had tube finals?

This semi-solid-state radio would be consistant with fixing a major problem with the SB-104 which was its solid state finals and drivers. Ditching the frequency counter would correct the majority of its internally generated spurious signals. The spurs were mostly beeps that had a 2 per second rate. They were generated by the counter's timebase. The other spurs were the same as in the HW-100/101, and the SB-100/101/102, they were caused by a the unfortunate choice of 3.395Mhz as the second IF frequency. Anyone know why Heath picked this awkward freq?

During the time after the SB-104, Heath started thrashing the Ham gear around trying to find a combination that would work, could be built, and would sell. They never found it except in the QRP radios (D.C. receivers yuuch!). One of the last Heath designed radios that they sold was the SS-9000. This radio was synthesized, 100W, 2 vfo's, RIT, Passband offset, RS-232 controlled, WARC, Voice Processed, 1KHz and 200Hz CW filters, etc. It was factory built, works pretty well, but was blessed with extreme phase noise, and a $3000 price tag! I bought one of these used a few years ago... my 1967 Collins KWM-2A is better for weak signal work...sigh!

924. Benton Harbor Lunch Box

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-13 16:00:57 UTC
From: DERRY@ROSEVC.Rose-Hulman.EDU
Message-ID: <01GISOI1QQGW8WW2I4@ROSEVC.Rose-Hulman.Edu>
Source record: 291148

The old Benton Harbor Lunch Box. (BHLB)

(As well as the Sixer and the Twoer, there was a Tener.)

My first rig (1960) was a Sixer. I worked 26 states with it. Output power is about 4 W (am) of a variation of Heising modulation (used an AUTORANSFORMER.

The rcvr is a superregenerative. Not much is super about it. Many, many hams used these in Indiana. In Terre Haute we had a huge roundtable every night from just after dinner lasting until "bedtime". What a fun time that was. When E-skip was in, the 4 W was about three more than needed.

The were many "mods" (we didn't use that term in those days) for the Sixer and Twoer, such as VFO, squelch, different rf connectors, etc.

I used my Sixer both in the shack and mobile. That's where the good old HALO came into its own.

After building a homebrew converter to use with a BC-342 rcvr, I just used the Sixer's xmtr in the shack. It made a great combo. The Sixer was retired in the mid sixties or so when I acquired a Seneca. I sold it for 15$.

(Later a a hamclub auction I bought another Sixer for 5$, which I still have. I think it still works.)

Sometime when six is really open, I'll find a kindred soul and we'll QSY to 50.4 MHz (or whatever my xtal is) and I'll have one last QSO with the BHLB. Then I will cast it in clear resin and use it for a "conversation piece". Come to think of it, that's what I originally bought it for!

I've not thought about my BHLB for years, and it'll probably be years before I think about it again. HI

73 es cul de K9CUN, Jack

derry@rosevc.rose-hulman.edu

The BHLBs played a LARGE part in greatly increasing the occupancy of the VHF bands at that time when everyone was sure that VHF was on its way out and we were about to lose much of the 50-54 MHz band.

I don't mind that the radios are small as much as the fact that to get a small radio, you HAVE to get all of the features. I think the ICOM O2AT represents the perfect radio for 90% of needs on 2 meters. The only thing I would add is more memories (maybe 20 with seperate scan limits) and direct frequency entry for all the digits. I know how to use every feature on the O2AT, except tone encode (another change, make the tone frequencies direct entry instead of coded in a table).

I find my friend's 2SAT almost impossible to use and completely non-intuitive. I can't program a memory with frequency and offset no matter how hard I try, unless I go back to the manual. The only time I look at the O2AT manual is when I need to set a PL tone.

My wife's Alinco DJF1T is considerably easier to use, but it still has lots of features that I can't figure out unless I have the manual. It also has some features that are annoying because they are modal and can be entered by brushing the wrong key. Getting out of the mode requires using function shift keys, and the mode is pretty subtle but will keep the radio from receiving anything.

I would like to see a small version of the O2AT with the 3 changes I noted above. Keep all of the ruggedness and simplicity of the O2AT but make it the size of the 2SAT or DJF1T. If I could find one of those I would buy it immediately. Until then I'm drawn between the convienent size of the Alinco, and the simplicity of my O2AT.

Congratulations! At the exams given by the MIT clubs, we stongly encourage every code-test applicant to try all speeds higher than his or her current "licensed" level. We give the 20 wpm test first, then the 13, and finally the five. We've seen enough 13 wpm applicants pass the 20 wpm test to know that our encouragement is more than a pointless pep talk.

930. Improving front end of GE MVP

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-13 18:34:08 UTC
From: dana@locus.com
Message-ID: <1992Apr13.183408.2864054@locus.com>
Source record: 291154
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.packet

I've been using a GE MVP for packet, and plan to use the radio as
the basis of a duplex data repeater. The MVP is a compact commercial
radio with a front end consisting of a 5 section helical resonator
followed by a JFET mixer. The service manual species a JFET "similar
to the 2N4391" as the part.

The 2N4391 is a switching FET, not normally specified for RF service.
I've started wondering if I could lower the front end noise figure, or
improve the gain without compromising dynamic range, by replacing this
FET with a healthy RF FET like a U310. I haven't compared the
transconductance and threshold voltages to guess at bias changes,
but I don't think that is too much of an issue.

Before I charge off, has anyone here had experience with this?

There is an FM (actually PM, not true FM) modification to the two-er which involves removing the modulation transformer running the modulation signal into a reactance tube which is added directly after the oscillator. As I recall, it produced pretty poor quality audio. I seem to remember it showing up in QST at some point.

Back when FM repeaters were just starting out, there was a modification
published to convert the "Two-er" to FM. (Added a mic amp and varactor
diode to the drystal oscillator.) For receiving, you just slope-
detected using the super regen receiver. If you tgurned the volumn up
all the way, you could just about make out the other guy's audio!

936. 145MHz mod for Icom IC-22S ??

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-13 19:29:03 UTC
From: bourque@sceng.UB.COM
Message-ID: <9204131226.A19656@sceng.ub.com>
Source record: 291160

I have recently saved from the junk box and Icom IC-22S that had seen better days. The radio is now working again. This radio is the Icom that has 22 channels that were diodes programmed. The radio also only covered 146 and 147MHz. Has anyone ever modified on of these radios to operate in the 145 segment? I do have a copy of the RADIO/TECH MODIFICATIONS NUMBER 4 so don't tell me to look there. Nothing in that book on that model. I've seen lots of these radios at flea markets so they are still around. I want to use the radio in a dedicated packet station. It would be a good one for that use if it would only go down to 145. Any help in net land would be great. Thanks for the BW. reply via e-mail or twisted pair.

YES.. I have owned Heath radios since 1969. How did they ever come up with
this frequency? There must be a good reason.

Seems to me that somebody else used this same frequency too ..

939. Problems with my IC24at

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-13 19:47:02 UTC
From: bruceo@isc-br.ISC-BR.COM
Message-ID: <3622@isc-br.ISC-BR.COM>
Source record: 291163

This weekend my ICOM 24at begin to malfunction, and I was hoping
that some of the net-experts could shed some light on the
problem.

My 24 is about 18 months old. I purchased it from a ham that I
work with, and he had already performed the extended xmit and rcv
mods. It seems to have been working fine until this weekend.

When using 440, everything works fine. On 2 meter, when using a
setting other than lowest power, there was a substantial flutter in my
transmission - some said it sounded like I was talking through the
blades of a propeller. The flutter is rather slow, maybe 2 - 3 Hz,
and makes it difficult or impossible to copy my transmission.
I tried different locations, batteries, frequencies and antennas
without improvment. I then plugged in my speaker-mike (which I
use more often then not), and the flutter went away on high, but
was still present on the higher low power settings. In addition,
I was not getting out well on high power (We had another 24 to
compare with). When I removed the speaker-mike, the condition
remained the same- high and lowest power ok, the higher low power
settings had flutter. :^(

I am now preparing to send my radio off to ICOM and spend the next
many weeks, radio-less, saving my pennies to pay for the work.

Can anyone tell me what might be wrong with my radio, and what might
have caused such a problem. I certainly don't want to go through
this again if I can avoid it.

Thanks... N7RWO

Well, I still see a lot of them, brand new, on dealer's shelves. And I understand they still sell. They do sell used, that's for sure. And its been my ONLY handheld for 8 years now. I happen to be one of those low-tech types who likes to sit on only one frequency and only one band for hours at a time.

Source record: 291167

I am interested in getting a set of schematics for the old
Heathkit HW-16 cw rig. I had one at one time, but sold it
sometime ago with the HG-10B VFO.

the hw-16 had QSK with solid state switching and was a three band
rig, 80-40-15 and i had converted mine to 80-40-20. it ran about
50 watts or so, solid state except for the final.

any help greatly appreciated.

From: depolo@eniac.seas.upenn.edu
Message-ID: <73912@netnews.upenn.edu>
Source record: 291169

I checked with the FCC last week to see what the most recent callsigns were
for our district (3) so I could tell new candidates of what call to sort-
of expect at our VE sessions. For the 3rd district, the latest calls for
the 1x3 (general/tech) block are in the N3B?? series. However, most
techs in this area had been receving N3L?? series calls. At first, I
figured it was just a mistake. However, a new ham in the area (code-
free tech) was given N3BTZ. What's the story? Are they reissuing
calls that are no longer in use, or was there a group of calls in the N3B
region that were never issued or what?

Hi All you good amateurs out there in HAM land. I have recently found out
(the hardway) That ICOM has a very POOR policy as far as keeping stock
for its many AMATEUR RADIO'S. I have a a ICOM-720A which at 11 years of age
the CPU went bad. I sent it to ICOM CANADA and they returned it as unrepairable
as ICOM no longer has the CPU. It has also come to my attention from a ICOM
repair man from ICOM USA that any radio older than 10 years is obsolite, and
parts are no longer available from ICOM. With this information I suggest all
sell your ICOM stuff, I have mine all listed for sale, and at one time, I would
not have any other brand in my shack, how things change, now You couldn't
give me an ICOM today.
The list of ICOM GEAR is
ic-720a - needs CPU
ic-735 - working?
ic-751a - working?
ic-271h - working?
ic-3200a- working?
ic-02at - working?
ic-471h - working?
ic-04at - working?
As it will most likly all be sold by the time anyone reads this, The list was
included just to show I wasn't kidding when at one time I swore by ICOM now
I swear at it.
I suggest we as AMATEURS not buy any more ICOM gear, until there repair policy
changes, and they keep there stock for a minimum of 20 years, and longer would
be better. How about GUYS and GALS???
Although it won't do me any good, perhaps someone in the future won't get
stuck with a icom rig, IF IT COULD BE REPAIRED.

Hi

Since my -470 already works (to some extent) from about 100 mhz to 200 mhz,
do you suppose that the local oscillator could be re-tuned to cover 140 mhz
to 240 mhz, covering the amateur 220 mhz band ?

I am looking for modifications on a _____(insert your favorite rig here).

I have seen the above line SO MUCH on this group lately! I wonder if anyone could post the address of the famous BOOKS that are mentioned every once in a while for modification question answers. Are you refering to books about modifications published by the manufacturers or by third-parties?

Help...I am dazed and confused. And I have a headache...Anyone got a mod for that?????

Long diatribe about ICOM not still supplying parts for 10 year old radio
deleted...

Come on guys, be realistic. I think it's real nice if a company supplies
parts for a radio made ten years ago, but dumping all your ICOM gear
because they don't still have parts for one is silly. Try going down to
the Chevy dealer and ask for a spare part for your Corvair. On the other
hand, if enough dummies read his post and want to sell their perfectly
good radios, we all oughta be able to buy 'em real cheap.....

956. Looking for recommendations for 2m HT for SKYWARN use

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-14 05:53:09 UTC
From: kucharsk@solbourne.com
Message-ID: <1992Apr14.055309.21339@solbourne.com>
Source record: 291080

With spring here, I was wondering if you folks could recommend a nice,
relatively inexpensive (around the price of the RS HT-202) 2m HT. It would
be primarily used for SKYWARN duties, so I'd like it to be at least somewhat
rugged and water resistant. Thanks in advance...

the SS-9000 was also a panic rework after the WARC '79 new bands were added. there was going to be an SS-8000. the new bands apparently could not be incorporated in the design and the SS-8000 design had to be scrapped. there had been ad literature distributed on the SS-8000 that i recall.

or so i remember -- this was back in the days of the KWM-380 also. didn't the TS-430 come out later than the SS-9000? it just seems like the TS-830 was out when the SS-9000 was out and that the TS-430 came along a bit later.

going to have to dig through the stacks to satisfy my own curiosity now.

While I can't buy a Corvair part from the local GM dealer, there are
many places that supply such parts today. If the original poster is correct,
it appears that ICOM didn't even have a place to refer him to that continues
to service these radios. There's a real problem here and while I'm not
about to run out and sell my ICOM HT, I would like to know that if it
fails at some time in the future that I can get it repaired.

Maybe we should ask the magazines ((QST, CQ, etc.) to add the long term
service policy of each manufacturer as part of their equipment reviews
in the future.

Additionally, (back to the auto example), it shouldn't be a major stock
supply issue for ICOM and any others to maintain a reasonable supply
of unique/proprietary components for longer than 10 years. They just don't
take up the kind of room/space that auto parts do.

It is an interesting aside that there are many pre-solid state
equipments that can be kept working well, yet we have here a situation
where a ham has a radio that isn't all that old, it is a very
usable radio for anyone that might have it, yet it can't be fixed because
of the failure of a unique component that the manufacturer can't or won't
provide. That's NOT very good public relations for ICOM.

From: taylor@tix.UUCP
Message-ID: <9204141314.AA02869@timeplex.com>
Source record: 291088

I've had a 2400H for about 2 months. I wanted a rugged 2 meter radio, no frills like scan capabilities, but just something to use for my 2 hours a day commuting. This radio fits my needs. It has 5, 25 or 50 watt power levels, built in sub tone (PL) capability and extended receive range without any mods up to 174 MHz. The mod to convert to even wider receive I've never done. One reason that I bought the radio was that I could use MARS freq's without any mods. The radio case is die cast and really built like the advertisements say. The owners manual is well written. It has 28 regular memories for all your favorite repeaters and public service/commercial freq's. The only problem, as with most all wide coverage units, is that in rf congested areas near some radio sites (say within a few miles) interference to the radio has been noticed on receive, but ther's only one place on I-280 in Newark NJ for about a 1/2 mile where I've had the problem. I'll probably buy another soon for my other car.

Seth T. KC2WE The opinions are my.own and not those of ascom-Timeplex, Inc.

2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281

RACESBUL.216 DATE: Apr. 6, 1992

SUBJECT: MGT Keys to successful operations
[Submitted by Richard Ferguson, Assistant Emergency Coordinator,
Boulder, Colorado. KA0DXM @ WA8ZIA.#NECO.CO.USA.NA]

Here are three keys to successful emergency operations:
1. Adequate training for emergency operations. This would
include good procedures developed through practice.
2. A good working relationship with the served agencies.
If the hams do not have a close working relationship
before the emergency, they will either not be utilized
at all during the emergency, or utilized poorly.
Perhaps the best reason for a focused group rather than
an umbrella group is that a dedicated group is what the
served agencies generally want! They are the
"customer" for the ham radio emergency service and they
need to be satisfied.
3. Good coordination between the ham groups. If each ham
group acts like its own kingdom, not deigning to speak
to other ham groups, the emergency response will not be
coordinated well. One key aspect of most agencies is a
lack of shared frequencies; that is, one emergency
agency may not be able to talk to another emergency
agency. The hams need to be able, if needed, to
provide the communications "glue" between many
different agencies, governmental and non-governmental.
Politics on the part of the hams or the agencies, often
stand in the way of essential cooperation.

RACESBUL.217 DATE: Apr. 13, 1992
SUBJECT: OPS What are some of the problems with RACES nets?

From the perspective of forty years of directed nets for
communications volunteers in government service this is what I
have learned.
The following nets usually die off for lack of interest:
1. Nets that consist only of a roll call and nothing else.
2. Nets that threaten expulsion if a station misses a certain
number of check-ins, especially if that particular station's
participation is not critical to the organization's mission.
In contrast, nets that allow check-in to ebb and flow with
the life of each member and provide a constant flow of
information, news, and items of interest, keep their members and
remain active for decades. Members WANT to participate in order
not to miss out on what's happening.
The major problem is HOW to get the news, information and
such. To that end, here is a suggestion:
Get the organization's director, commander or staff (such
as the RACES Coordinator, secretary, etc.) to prepare something
to be read on the net -- but not dictated as in a formal
message. In any agency there is always information of on-going
interest to volunteer participants. It just takes an effort to
obtain it and begin the flow. Once that process is started it
continues. Trip reports from your staff, articles in
publications received only by the staff, news of or about the
staff, activities that affect agency budget, mission, and such
are useful, as well as reports on or about incidents. These
reports may range from the mundane, such as a creek flooding, to
a major incident like a forest fire or earthquake.

Strange, how I have a 1950's vintage receiver, and I don't seem to have
any problem at all getting parts. More than that, I have a 1940's vintage
transmitter made by a company long gone, but because it uses standardized
components, I can walk into my local electronics shop and get a replacement
for just about everything in it.

I would expect this to be a reasonable standard to follow. It's utterly
inexcusable that a manufacturer of ham radio gear can't even keep parts for
ten year old equipment, but even more shocking that they can't refer him to
someone else who does (of course since it's a mask-programmed custom device,
they're going to be the sole source).
When I upgrade, I won't be buying an Icom, or any other nonrepairable
appliance rig.

That's not a very good comparison.

Also, I believe they stopped making Corvairs more than 10 years ago.

If I went into my local Chevy dealer and asked for a new headlight molding assembly for a 1979 G-20 van, they most certainly would have one. GM even stocks cosmetic body parts for over 10 years. The electronic equipment in a radio is not that similar to exterior body parts, yet I would assume that any company willing to adequately support their equipment would stock CPU's and other assorted prone-to-failure components for all of their radios as long as they were in business. How hard is it to stock extra IC's?

Hi all,

I an in the market for a dual band HT. I need extended RX capability
for both VHF and UHF (for Emergency Net support and general monitoring).
I plan to replace my two HT's and scanner with a single unit.

I would like at a minimum the following features:

-Dual RX, Full duplex TX, Cross band repeater capability
-40 Channels Minimum (more the better)
-Wide-band RX 140-172 Mhz / 420-480 Mhz min. (Aircraft RX , 800 Mhz and
up RX would be preferable)
-Wide band TX modifiable (hold your flames, I want the capability only.
in an recognized emergency it can`t hurt to know you have it)
-DTMF Dialer, DTMF and PL encode/decode, DTMF Squelch
-Multiple power levels
-Rugged case and construction

I have narrowed my search down to the following:

Icom IC-W2A
Kenwood TH-77A (on sale / is there a NEW model coming out?)
Alinco 580 (new / I`m leaning towards this)
Standard`s 144/440 model (who sells it?)

Please send me your comments and any information on any new models that may
be coming out in the near future (144/220/440 Triband HT?). Any modification
info on these units would be appreciated.

Well (knock on wood) my 12+ year old IC-720 (not 720A) is still working just fine. Guess when it goes, it goes. I've been inside to install filters and such; if it's an electronic problem it will probably be repairable. If it is the CPU, custom chips, or that unique bandpass filter motorized switch, then you are out of luck.

Perhaps someone at an independent repair shop somewhere is saving 720 carcasses in an effort to provide some support?

It has been about 7 years ago, when I wanted to go for AMTOR with my IC 720. It did not work because of the long switching times. I called ICOM Duesseldorf and asked for support. The radio was abt 7 years old. I had been told then, that they did no longer support it and I should buy a new radio, which would be able to make amtor by default ...

I did as advised and I am very satisfied with my YAESU FT-767 GX.

I agree with the previous posting. We are lucky that Icom supports it this long. Most companies support a product for only 5yrs after it has been obsoleted, a very few support it after that. Some don't even support things that long. Considering the tax they have to pay on inventory (that includes new products plus parts to build and support them plus inventory for parts of obsoleted products for support), companies try to keep inventories low. Try buying parts for a computer more than a few yrs old. Of course if someone wants to sell me some of thier 10 yr old equipment at a good price I wont complain.

I have a Yaesu FT301D that I ordered the CW and AM filters for this year, directly from Yaesu. They also stock the optional crystals that were available. I'm positive that this radio is more than 10 years old, and would guess that it is approaching 20 rapidly if it hasn't already passed that milestone as well. I am now beginning to wonder if I shouldn't sell my one piece of ICOM equipment and buy the Alinco I've been mumbling about lately.:-)

Well, I'm buying a new HF rig this week :-). And, I'm NOT buying an ICOM.
Based on what I've seen here, I'll probably NEVER buy an ICOM.

I've got IT, but not a KC tracker or tuner. There was an article in
one of the ham magazines (73?) a month or so back about modifying the
tuner interface to talk to a PSK(?) modem to track packet stuff
properly.

TAPR (Call information in Tucson, AZ and ask for Tucson Amateur Packet
Radio) has a new kit out that talks serial to your computer. You feed
it elements and it drives your rotors for you. I don't remember if it
tunes radios, but I suspect it does.

With the "throw away" attitude that most manufacturers have these days, I
wonder how many of today's fancy super digital radios will still be
running 15-20 years from now. How many will be junked all because some
simple but unique component (eg. custom chip) fails.

I remember hearing somewhere that somebody made a digital radio a few years
ago that had the custom microprocessor code stored in battery backed up RAM !!
If this is true, then what is someone supposed to do when the battery fails
10 years from now and the program is lost.. You end up with a 25 pound
pile of useless iron and silicon.

Stuff today is not made to be fixed... Period.

Most cars don't make that many drastic changes from year-to-year so a
part for your 1985 XYZZ may be the same for the '86 '87 '88 '89 model..

How many common parts do a lot of these Icom/Kenwood radios share among
models. There is no real reason to change EVERYTHING from model to model.

My old Heathkits (the SB and HW series) had a LOT of parts in common. Makes
them real easy to fix (usually).

My IC-502 and 202s are pre-synthesizer VHF rigs. Simple design, easy to repair, both 10+ years old. No VLSI to speak of. Too bad Icom stopped making them years ago, and jumped on the gadget bandwagon.

Planned obsolescence is the price you pay for having lots of useless features on your rig.

A company.. no matter the company.. can't possibly cover all the aspects
or situations. I am sure that if I looked hard enough today, I could find a
company that supplies working models and parts for an Atari 2600 or a
Vectrex Video Game system. Atari is still around but terrible in the PR
department. I would have to go with word of mouth.. cause Atari probably
couldn't tell me anything. GCE... the makers of the Vectrex.. died long
ago.. yet the machines are still out there and some dealers still have
them.. but I can't call GCE and ask them anything.

WS> Maybe we should ask the magazines ((QST, CQ, etc.) to add the long
WS> term
WS> service policy of each manufacturer as part of their equipment
WS> reviews
WS> in the future.

Unfortunately.. there IS such a thing as planned obselesence. I agree
that parts for a radio should be something easily available.. but I am
willing to bet that if the person looked hard enough at the small time old
(and in some cases new) dealers, he may find what he's looking for. Someone
has got to have it, but don't boycott ICOM because they don't know. They
would have to spend money, money that would be used on R&D in finding a
company that supplied these parts, money that COULD be used on new radios.
They have to have someone volunteer this information to them. ICOM stopped
making this part. They can't be held liable for something they discontinued
years ago.

WS> Additionally, (back to the auto example), it shouldn't be a major
WS> stock
WS> supply issue for ICOM and any others to maintain a reasonable supply
WS> of unique/proprietary components for longer than 10 years. They just
WS> don't
WS> take up the kind of room/space that auto parts do.

Depends. Even libraries.. those wonderful places that are supposed to manned by archivists.. throw away or sell old material. Heck.. I just went to a library sale that was dumping tons of old movie trailers and books. Why? Granted they don't have the space like ICOM might have.. but things start to take up space. Let's say 10 years go and no one asks for issue number 3 of Commodore Magazine. They are going to dump it eventually.

WS> It is an interesting aside that there are many pre-solid state
WS> equipments that can be kept working well, yet we have here a
WS> situation

WS> won't
WS> provide. That's NOT very good public relations for ICOM.

True.. but what about all those people that bought into the PS/2 syndrome? It's hard and does cost a company money, overall, to keep really old components. I know you say that it's not that old, but 10 years is a long time.. for any industry! I sympathise with the owner of the broken radio. I can imagine how frustrating it must be to own a perfectly good piece of equipment and not be able to use it because of a unique part being gone..

I could get just as angry at Commodore for throwing away users of the 128d.

My suggestions:

Get on EVERY major computer network you can. There are tons of people who don't have access to INterNet.. but do on Fido.. WWIV.. PCRelay..etc.

See if you can get people to post on the major computer databases (i.e. CompuSpend, Prodigy, and various others).

Advertise of PBBS!

Write into magazines.

Call dealers listed in major HAM magazines.. including ones from other countries like the U.K.

Granted I don't know the whole story.. but someone may be able to know something!!

Mike..

HI Manuals, POB 802, Council Bluffs IA 51502, no phone (mail order only)
has a large selection of manual copies available. They are quite rigid
in their ordering policies. You can only order from their catalog information.
Send them $2.00 and ask for their latest catalog. The prices cited include
shipping - if you want it to be sent insured, add $0.25 for each $10.00
of value.

The good news is that the ARRL has a copy of the HI catalog. If you want
to know if HI has a manual, send email to our Technical Department
Secretary bdicosim%arrlhq.UUCP@uhasun.hartford.edu. Bridget will look
it up and send you the exact model number and pricing information. That
way you can just send HI an order and a check (don't forget to add $2.00
so you can get your own catalog). You should then get the manual in a few
weeks.

The ARRL doesn't want to be in the manual-copy business, but if HI doesn't
have one and we DO, we will make a copy for a reasonable charge.

BTW - the HW-16 is listed in HI. The model is HW-16 and the cost is $16.50.
The Heath manuals are quite large so the cost is higher than some of the
smaller manuals. 73, Ed

Are you still living in the late 80's? There's BEEN an international standard
for 9600 baud modems for over 2 years now (CCITT v.32). To top it off, the
NEW standard is for CCITT v.32bis - 14.4 kbaud - and you can get a good
external model for $290 - $300, NOT $500.

You might consider finding out a little more about what's happening today
before making assumptions like the one you made.

Well, that was a slight lie. It was *supposed* to auto-reply. Except that
I forgot to quote the mail address in the line being handed to sh for sendmail.
Result: No replies got through. Therefore, this is a mass ACK.

I have received the following entries, and they look OK:
(the file names are CALL:freq)

Message-ID: <1992Apr14.131942.3955@bb1t.monsanto.com>
Source record: 291113

I don't know about Corvairs, but you'd be surprised just how many
old parts GM stocks...

I have only had one occasion do deal with Icom service. When I was in
college we had a IC-251A that had the internal power supply fail. Although we
had a wealth of competent electrical engineers, we inquired about a replacement
from Icom and were told that it was not available and they could not service
the one we had due to lack of parts. I'm sure that none of the parts could
have been all that special in a power supply. The radio was roughly 4 or 5
years old at the time and I was very surprised to hear that Icom would not
service it.

>wont complain.

I don't agree, A few quick points,

If ICOM is the only vendor NOT supporting their ham equipment
for extended time frames, then they deserve whatever negative
reaction the ham community may choose to respond with. From
the many other postings, it seems the other manufacturers (Yaseu, etc.)
do, in fact, maintain a repair capability well beyond that of
ICOM.

Any tax a manufacturer must pay is a part of the repair costs.
If avoiding the tax means no repair facility after "n" years,
then ICOM must be prepared to deal with a possible loss of
sales, etc. It is ICOM's decision.

The old computer analogy only goes so far. The really old units
are so technologically behind today's equipment, few folks want
to repair them anyway. Case in point, my son has a bad Commodore
64 floppy drive. It'll cost more to fix than I can buy a used
one for....plus, we use an IBM clone anyway.

As for the more contemporary computers, there's no end to the
supply of aftermarket motherboards, chip upgrades, etc. From
what I can see, the IBM XT will be serviceable and upgradeable
for many years.

Bottom line here, remember, is that much of this equipment is
not the low end (under $200) variety. I'd be really ticked
if I bought a $1000 radio and couldn't get it fixed after
only 10 years had passed.

Another aspect is that ICOM could easily hand off any stock
of the needed proprietary chips, ICs, etc to some outside

repair service so the ICOM equipment could still be maintained.
That is done by other industry players in many fields.

Standard Disclaimer- Any opinions, etc. are mine and NOT my employer's.

I had one of these and loved it. It's a real workhorse. Performed better
than the TW-4000 dual bander that I replaced it with. Wish I hadn't sold it.
There were several buyers lined up to buy it. The 7950's only fault is that
it does not have dual band capability.

Message-ID: <Bk19iB2w164w@phsbbs.princeton.nj.us>
Source record: 291122

RE: IC2-AT - this was my first 2M rig that wasn't converted from commercial service (I had an RCA Tac-Tec, 6ch. 5W before). It was small, light, rugged and had wonderful audio. Since we belong to a 1M split repeater, it was a little bit of a pain to rock the freq. switch from 146 receive to 147 transmit! Well, one of the brain trusts at RCA Labs (now SRI nee GE David Sarnoff Research Center in Princeton) came up with a simple one diode switcher that let you set the rig to 148 (which was really 146, but when you transmitted, it switched up one MHz for you automatically). Practically everyone in our club had 2-ATs with this mod!

Thanks for the memories!!! 73,

What you say here Bill has already been done by a very old CB
manufacturer namely Browning. The Browning GoldenEagle Bases
still have a place where you can buy the parts in N.H. Some
guy bought up all the parts and is still selling them.

That will never happen with Icom but at least they can give
some other company the right to sell the micros and Final
modules for old Icom radios.

I had a Yaesu FT-101E for 12 years before I sold it and I
could still buy parts for it.

Lately I have heard alot of activity between 8.7 and 9 Mhz

On 8730, 8740 and 8770 I often hear "telephone" conversations in SSB.
Could someone please explain to me what they are (ie. who do they serve etc.)
On 8830 I receive airport information from three airports (Hong Kong, Hololulu and Auckland). On 8870 I can pick up communications between planesand airports.
Also, on longwave (around 300-400 kHZ) I can pick up similaR AIRPORT INFORMATION (LOCAL).

I would like to receive more iformation aboput such frequencies (both local and worldwide frequencies).

Could you please Email your responces or post the to this group.

Thanks.

>mebly@eng.umd.edu Disclaimer: I didn't really say this.

Shouldn't someone check on who employs the guy who started this? Could it be Yaesu..... or Kenwood.... or..... ?

Really though... I haven't got any old equipment... (dont have much equipment in the first place) but are any of the other companies any better? I can't believe that Icom is the only company that has ever heard of planned obsolescence. Lets hear about how the other ham rig manufacturers do indeed stock the custom components for those solid-state, fancy-schmancy, whistles-and-bells, gizmo radios like the ones discussed from Icom.

Dont get me wrong... I'm not sticking up for Icom, but to decide on a make of radio to avoid without investigating the problem in other companies is very irresponsible.

available via anonymous FTP from ftp.cs.buffalo.edu (currently at IP
number 128.205.32.3 or 128.205.36.1). For those without FTP access
(and ONLY those without FTP access, please), there is an FTP mail server
at ftpmail@decwrl.dec.com. Send E-mail to this address with the word
HELP for more info.

Questions to bowen@cs.buffalo.edu

ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
carf.db_fcc.Z - Canadian ham database in FCC format
carf.db_orig.Z - Canadian ham database in original format
docket_91-36 - information regarding the proposed scanner regs
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_ham_123 - frequently asked questions about ham radio (parts 123)
faq_ham_45 - frequently asked questions about ham radio (parts 45)
faq_packet - frequently asked questions about packet radio
fft.com - EGA/VGA DOS command for spectral display (QST 1/92)
ffth.com - Hercules DOS command for spectral display (QST 1/92)
florida_antenna - Florida State antenna law info
guide2newsgroups - description of USENET newsgroups dedicated to radio
ham_sat_sum - summary of information needed to get on satellite
hams_on_usenet - list of ham operators and e-mail addresses on the net
hamstacks - information about the question pool stacks
handicap_waiver - info on obtaining a handicapped test waiver
hf_rigs - QST reviews of available HF rigs
ht_info - general information about commercial hand helds
intro_to_swl - info for aspiring short wave listeners
intro_to_scanners - info for aspiring scanner listeners
logos - PostScript logos for various ham organizations
mail_order - a database of electronic mail order shops
new_packeteers - helpful essays for new packeteers
newcomers - tips and hints for those new to amateur radio
```

packet_clubs - organizations you can get more packet info from
packet_gateways - list of gateways from packet to Internet
phone_bbs_list - phone BBSs for ham related issues/software
pio_handbook - ARRL Public Information Officer's Handbook
qst_prodrev - index of ARRL product reviews in QST
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms

For readers of this newsgroup both new and experienced, these files are a de-facto "Required Reading List" to provide definitive answers and pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small PostScript graphics that you feel would enhance this collection are most welcome. Submit to Devon via his E-mail address above.

Additional archives out there that have /pub/ham-radio directories are encouraged to "mirror" these files to provide redundant storage for these documents.

Additional documents on Usenet and other newsgroups may be obtained from pit-manager.mit.edu (IP 18.172.1.127) via anonymous FTP or via mail server (send the word "HELP" to mail-server@pit-manager.mit.edu).

Thanks to Devon Bowen, KA2NRC, for providing diskspace and maintaining these valuable archives, as well as all the authors who wrote and submitted the information contained in them.

Archive-name: personal-radio-intro
Last-modified: 18 February 1992

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, and rec.radio.swap newsgroups. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 February 1992.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began to dominate other topics in the group and on the list. This resulted in the logical solution: a group was created to hold the packet discussion, and another corresponding mailing list was created as well: net.ham-radio.packet and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great Renaming essentially unchanged, moving from net.ham-radio[.packet] to rec.ham-radio[.packet]. Readership and volume grew with the rest of the network.

The INFO-HAMS mailing list was originally run from a US Army computer at White Sands Missile Range, SIMTEL20. There were few problems with this arrangement, but one was that the system was not supposed to be used for commercial purposes. Since one of hams' favorite pastimes is swapping gear, it was natural for hams to post messages about equipment for sale to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use restriction, and after some argument, a group was created specifically for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups,

and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the structure we now use.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.packet is for discussions related to (surprise!) packet radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgable folks in radio digital communications can be found here, and anything in the general area is welcome.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups are the place for public discussions.

The reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. The neverending no-code debate goes here, as does the New Jersey scanner law, the legality of ordering a pizza on the autopatch, what a bunch of rotten no-goodniks the local frequency coordinating body is, and so on.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest

to both hams and CBers - and very few topics are.

The rec.radio.amateur.misc, .packet, and .policy groups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for details. You can also post to rec.radio.swap by sending email to rec-radio-swap@ucbvax.berkeley.edu; if you do it this way, be sure to include an address for responses by electronic mail, as the gateway does not automatically do so.

A Note on Crossposting
======================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

>them real easy to fix (usually).

The Economist had an article recently about how all this rapid model change business harmed these companies in the long run. I figured that out years ago - their tooling costs must be staggering.

But the Japanese stuff used to be pretty much standard commodity parts. I recall repairing Japanese radios and cassette recorders by canibalising parts from other radios, not even the same brand. In those days of course the venerable FT101 from Yeasu was in production until the stamping dies wore out. (Geezer Alert!)

Today alas we have the walki-talkie of the month. What do we get with each new model? Another LED or two. But it is even worse in the Sony Walkman business. It is damn close to impossible to buy the same model of Walkman twice. The "GE" Super Radio II is already out of production, after hardly a year being back ordered for weeks because it was so popular - Are they making room in the factory for more VCRs?

Of course why all the new models? So you the customers will buy them. Must admit it seems to work judging by the frenzy I see when a new model radio comes out.

1008. The Dwindling Newcomers

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-15 05:14:51 UTC
From: abeals@catnip.berkeley.ca.us
Message-ID: <5433@catnip.berkeley.ca.us>
Source record: 291032

Dear Sir:

I have read with interest your Zero Bias in the March issue of CQ, especially the part regarding the influx of newcomers into our ranks. ARRL has also taken note of this fact.

The answer is very simple. As long as little, or not attempt is made to enforce the CB Regulations this condition will continue, and may even get worse. The experience with recent code and theory classes is, most of those who start out find that they cannot learn the code in ten minutes, so they drop out and get CB sets. The CB'ers exchange QSL cards, have nets in operation, run linears, ignore the silent regulation, and in general operate as though there were no regulations other than their own personal desires.

I am not against CB'ers if they operate according to regulations, neither am I criticizing GCC for their lack of enforcement of the regulations. CB has a place and use if handled according to regulations, and FCC has neither the funds or personnel for the proper enforcement of the regulations.

There is also another side of the picture which needs looking at. It is long past time when we amateurs should wake up and put our house in order. What impression are we making on those foreign officials who are eyeing our bands for their own use, when so often our bands sound like a bunch of CB'er kids? If we continue on our present course, what of the future? What may very well happen is that we will lose most of our bands and what ones are left to us will be taken over by the CB'ers.

It is up to each and every amateur to see he stays strictly within our regulations and that he makes proper use of his privileges as an Amateur.

I too feel that I have to agree that ten years is about the maximum amount of time that you can really expect to get all parts for a piece of electronic equipment. It may not be Icoms fault that they cannot get the CPU required. I suspect that the manufacturer just will not make the part in the volumes required by Icom at a reasonable price. So you may ask why don't they keep at least N years stock of X part for just this type of problem? It's not a matter of space more a matter of cost if you make for example 20 models each with 5 custom components in they they have to stock 100 different items for up to what 10, 20, 30? Years, what would you call a reasonable amount of time? And how do you accurately judge the volumes that should be held in stock?
I really do not think that the car spares situation is at all analogous to the spares relating to any form of electronic unit (except military equipment). I suggest that you try to replace that 20mB full height hard disk drive in your old XT with an exact copy new device and see where it gets you.
I think that if you really want a device which you can support of >15 years then build your own and buy two sets of spares whilst you are at it. You have to remember that what you have bought is a piece of "home" equipment and it is supported (or not) as such buy the manufacturer. Although you may think that your radio is in a different league to your Japanese built microwave oven or hi fi I believe that in the manufacturers eyes it is not.

Well the Geographic Server just came up with the following coordinates...

39 44 32 North
84 11 30 West

I hope that helps...

1014. Re: Ever break the ferrite slug?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-15 09:25:20 UTC
From: dstock@hpqmola.sqf.hp.com
Message-ID: <16610117@hpqmola.sqf.hp.com>
Source record: 291038

It is quite true to say that there are a hell of a lot of different ferrite materials with wide ranging capabilities. It is most likely however that the cores you are having problems with are not ferrite anyway.

Dust Iron cores are most commonly used in these applications, and there is a far narrower range of such materials. If you can find slugs described as "Carbonyl" or "J" you should be close enough. Dust iron is more likely to crumble than ferrite.

TDK are the largest Japanese supplier of cores and coils of all types (Their S18 VHF range DOES have ferrite slugs) Coil Craft in the US have a wide range, but you may find metric threads a problem.

1015. Re: How many green stamps with some QSLs?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-15 09:55:41 UTC
From: dstock@hpqmola.sqf.hp.com
Message-ID: <16610118@hpqmola.sqf.hp.com>
Source record: 291039

In many cases the IRC gets used as currency and never redeemed for a stamp.

If you get an IRC with an incoming card, you can buy the return stamp with your local currency, saving the IRC for when you initiate a QSL exchange. This neatly avoids their poor financial efficiency. Some people with a surplus sell them off at prices between cost and redemption value.

It always seems unacceptable to me that one station of two in contact should be EXPECTED to pay for both cards and both postage. When confronted with "send $2/whatever for my card" I make a point of relying that my card costs $XXX and that I only QSL on receipt.

I always QSL, at my own cost, if the other station requests a QSL. Direct. but I will not pay the other station's QSL costs. If he wants to send me a card I'll be happy. I just consider the radio bit to be more important than the postal bit. Be insulted if I ever ask you for a QSL, it will be because I want confirmation because of suspected piracy !

Not wanting to sound mean, but maybe this thing is getting out of hand.

GM4ZNX

1016. rec.radio.amateur.misc Frequently Asked Questions (Part 1 of 6)

Posted-By: auto-faq script
Archive-name: ham-radio-faq/part1
Revision: 2.8 04/15/92 00:22:24

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

To reduce the size of each article, the FAQ information is posted in 6 parts:
Part 1 - Introduction
Part 2 - Beginning Amateur Radio questions
Part 3 - "Where can I find ..." computer questions
Part 4 - Amateur Radio Organizations and Publications
Part 5 - Common Advanced and Technical questions
Part 6 - Special Topics in Amateur Radio questions

Table of Contents
-----------------
Dates indicate last modification.

Part 1 - Introduction
** Table of Contents (4/92)
** How to Contribute to the FAQ Articles (4/92)

Part 2 - Beginning Amateur Radio questions
** What is Amateur Radio? (pre-4/92)
** Who can become a ham in the United States? (pre-4/92)
** OK, so how do I become a ham in the United States? (pre-4/92)
```

** Where can I locate information and books on Amateur Radio? (4/92)
** How much does it cost? (4/92)
** Where can I take the tests? (pre-4/92)
** What are the tests like? (4/92)
** What can I do with a ham radio license? (pre-4/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (pre-4/92)
** Should I build my own equipment? (pre-4/92)
** Should I build my own antenna? (pre-4/92)
** Do I need a huge antenna and tower like my neighbor? (pre-4/92)
** Where do I buy equipment? (pre-4/92)
** I've only got one 'meter' on the front of my radio - does this mean it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-) (pre-4/92)

Part 3 - "Where can I find ..." computer questions
** Where can I get ham radio software for my computer? (4/92)
** I don't have a news server at my site, how can I subscribe to the rec.radio.amateur groups? (4/92)
** I can read news at my site, but I don't have posting privileges. How can I post? (4/92)
** I don't have FTP capability at my site. Can I get files via email? (4/92)
** Where can I find Anonymous File Transfer Protocol (FTP) sites that have ham-related files? (4/92)
** I'm having trouble using FTP....HELP! (4/92)
** Are there any Telephone BBS's which have ham related files? (4/92)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Are there any on-line callbooks and geographical name servers? Access to FCC databases? (4/92)
** Where can I find modifications for my radio to extend its capabilities? (4/92)
** Where can I find VE sessions in my local area? (4/92)
** Why isn't XXX available electronically? (new 4/92)

Part 4 - Amateur Radio Organizations and Publications
** How do I use the incoming and outgoing QSL bureau? (pre-4/92)
** Anyone know anything about the QSL Post Office? (pre-4/92)
** Are there any news groups for CAP? (pre-4/92)
** What's the name of the QRP club that issues QRP numbers? (pre-4/92)
** Can I send ARRL or W5YI electronic mail? (pre-4/92)
** "Why doesn't the ARRL do...?" (new 4/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I become a 10-10 member? (pre-4/92)
** How do I join MARS? (pre-4/92)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (pre-4/92)
** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio allocations and question pools? (pre-4/92)
** Can I post my neat new ham related program on rec.radio.amateur.misc? (pre-4/92)

Part 5 - Common Advanced and Technical questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** I'm confused. What do all those abbreviations mean??? (4/92)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (4/92)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (pre-4/92)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (pre-4/92)
** I got TVI...HELP!!! (pre-4/92)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies does JPL and GSFC retransmit the shuttle audio? (pre-4/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** How do I modify my current Amateur license? (4/92)
** I'm confused about XXX, should I ask the FCC? (new 4/92)

Part 6 - Special Topics in Amateur Radio questions
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (pre-4/92)
** What do I need to get started in packet radio? (4/92)
** What do I need to get started in satellite communications? (pre-4/92)
** What is available to get started in SSTV and WEFAX? (pre-4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider the following criteria:
- is it a commonly asked question?
- will its inclusion help reduce the usage of network bandwidth?
- how useful is it to beginning Hams or to the majority of Hams?
Contributions don't have to meet all of these but the minimum is one. We actually only ask that you consider these before contributing.

We can't necessarily include every question or every topic - the network simply doesn't have enough bandwidth to carry that much information. Besides, the point is that we're trying to conserve network bandwidth. You can find the locations of much more information by referring to the "Index to the rec.radio.amateur.* Supplemental Archives" posted monthly by Paul Schleck KD3FU.

If you suggest a question for this FAQ, please include the answer. You'll get credit for your contribution and you'll speed up the process of getting the information ready for distribution.

If you feel your contribution is sufficient to meet the considerations shown above, send it to hamradio-faq@uts.amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ian Kluft KD6EUI ikluft@uts.amdahl.com (Santa Clara, CA, USA)
Michael Larish KD6CTZ nomad@ecst.csuchico.edu (Chico, CA, USA)
Paul Schleck KD3FU pschleck@odin.unomaha.edu (Omaha, NE, USA)
Tom Sefranek WA1RHP tcs@ll.mit.edu (Shirley, MA, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Diana Syriac KC1SP dls@genrad.com (Leominster, MA, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin TX, USA)

** Acknowledgements

Before giving credit to anyone else, we should acknowledge Diana Syriac KC1SP for having originally created this FAQ and being its original maintainer. All questions listed as modified "pre-4/92" are entirely Diana's work or her editing of a contributor's work. Diana is now one of a larger group that maintains this but we didn't want her effort to be "lost in the crowd."

As new material is added, acknowledgements to the contributors will be placed here.

** Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the news-group. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)

* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* As also mentioned in Part 5 of the FAQ, software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Beginning Amateur Radio questions
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** What is Amateur Radio? (pre-4/92)
** Who can become a ham in the United States? (pre-4/92)
** OK, so how do I become a ham in the United States? (pre-4/92)
** Where can I locate information and books on Amateur Radio? (4/92)
** How much does it cost? (4/92)
** Where can I take the tests? (pre-4/92)
** What are the tests like? (4/92)
** What can I do with a ham radio license? (pre-4/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (pre-4/92)
** Should I build my own equipment? (pre-4/92)
** Should I build my own antenna? (pre-4/92)
** Do I need a huge antenna and tower like my neighbor? (pre-4/92)
** Where do I buy equipment? (pre-4/92)
** I've only got one 'meter' on the front of my radio - does this mean it's
a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-) (pre-4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service
whose primary aim is public service and communication between
private persons. Amateur Radio operators are commonly called
hams. It's great fun to talk to someone in Japan on the radio!
Here's one ham's description of Amateur Radio: "Climbing towers,
roofs, trees, or any other fixed object to hang antennas. Restoring
ancient equipment to operation. Playing with glitzy new equipment.
Blowing up finals. Cutting holes in your (or your buddie's) car.
Building your own stuff. Wiping out your neighbor's TV and then
having to explain and fix it. The joy and magic of communicating
with someone half way around the world with a few bits of glass and
wire."

** Who can become a ham in the United States?
Anyone who is not a representative of a foreign government can
be an Amateur Radio operator in the USA. There are tests that
```

you must pass to get a license, however the tests are not insurmountable. There are 7-year-old hams and 80-year-old hams. There are many handicapped hams who get great enjoyment out of Amateur Radio.

** OK, so how do I become a ham in the United States?
There are now two entry-level class licenses in Amateur Radio. A Novice license requires passing a 30-question written test and a Morse code test given at 5 words per minute. A Technician license requires passing the 30-question written Novice test and a 25-question written Technician test, but no Morse code test. See local radio clubs or radio stores in your area for more information. Note that you can get a higher class license instead, simply by passing the required tests.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications. Be assured that once you get a callsign, the mail order ham radio companies will find you :-).

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC Rules manual, costing around $32. (The combined manual is new and was made for the codeless Technician License.) The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

** How much does it cost?
To take the Novice tests, it's free. To take the Technician or higher class tests, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests can be given by any two qualified hams of General

class license or above. The Technician tests and all higher class license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1992); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but
here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the
United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization
thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur
Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate
Radio System).
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some elctronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals
back to people on the Earth.
* Experiment with Amateur TV (SSTV) or send still-frame pictures
by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out
local radio clubs. As well, some people have volunteered to be
an Elmer over the Usenet. Paul has volunteered to maintain that
list. If anyone wants to be an Elmer, or needs an Elmer, email him:
Paul W. Schleck, KD3FU, acm005@zeus.unomaha.edu

** Should I build my own equipment?
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

** Should I build my own antenna?
Most hams build their own antennas for base station use and buy
antennas for mobile (car) use. Most beginner ham books describe how
to build different types of antennas. Order of difficulty, from
easiest to more difficult, for some common antennas are: wire dipole,
Zepp, Yagi, Quad.

** Do I need a huge antenna and tower like my neighbor?
No! Large beam antennas and 40-foot towers are very expensive. As
a beginner, a simple dipole antenna is perfectly adequate. As you
gain experience (and money :-), you may want to invest in something
bigger.

** Where do I buy equipment?
If you can afford new rigs, there are many mail order stores that
advertise in ham radio magazines. If you want to buy a used rig,
the best place is at a "hamfest" (ham flea market). You should take
along an experienced ham, since some of the used equipment may be
inoperative, overpriced or poor quality. You can also answer ads
in ham magazines or posted at ham radio stores, although often, by
the time you call, the equipment has already been sold.

** I've only got one 'meter' on the front of my radio - does this mean it's
a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-)
Meter refers to the wavelength of the signal at which you are
transmitting. There is a inverse relationship between the frequency
(specified in kilohertz or megahertz) and the wavelength (specified
in meters or centimeters).

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - "Where can I find ..." computer questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** Where can I get ham radio software for my computer? (4/92)
** I don't have a news server at my site, how can I subscribe to the
rec.radio.amateur groups? (4/92)
** I can read news at my site, but I don't have posting privileges. How
can I post? (4/92)
** I don't have FTP capability at my site. Can I get files via email? (4/92)
** Where can I find Anonymous File Transfer Protocol (FTP) sites that
have ham-related files? (4/92)
** I'm having trouble using FTP....HELP! (4/92)
** Are there any Telephone BBS's which have ham related files? (4/92)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Are there any on-line callbooks and geographical name servers? Access
to FCC databases? (4/92)
** Where can I find modifications for my radio to extend its capabilities?
(4/92)
** Where can I find VE sessions in my local area? (4/92)
** Why isn't XXX available electronically? (new 4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** Where can I get ham radio software for my computer?
Atari: John Adams KC5FW, 17106 Happy Hollow, San Antonio, TX 78232
"or tune into the weekly net Sundays 1600 UTC on 14.325 MHz".
MacIntosh: MacNet, John Seney WD1V 144 Pepperidge Dr, Manchester,
NH 03103 (sent 2 800k FORMATTED diskettes, one of which
contains a TEXT file containing your name, address, home PBBS,
your radio & computer interests and equipment).

(See also the information about Anonymous FTP and ham-related
telephone BBS's below.)

** I don't have a news server at my site, how can I subscribe to the
** rec.radio.amateur groups?
To subscribe to rec.radio.amateur.misc, send email to:

Info-Hams-Request@ucsd.edu (128.54.16.1)
```

In the body of the message, write:

subscribe Info-Hams

Similarly, to subscribe to rec.radio.amateur.packet, send email to Packet-Radio-Request@ucsd.edu, message is "subscribe Packet-Radio", and to subscribe to rec.radio.amateur.policy, send email to Ham-Policy-Request@ucsd.edu, message is "subscribe Ham-Policy", and to subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu (128.59.40.129), message is "subscribe swl-l (your name)".

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"; don't post to the newsgroup itself! Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

Another mailing list of interest is antique-radios. To subscribe, contact antique-radio-request@swbatl.sbc.com (Tom Adams). This mailing list is for discussions on antique radio, television and vintage electronics.

** I can read news at my site, but I don't have posting privileges. How
** can I post?
You can post to rec.radio.amateur.{misc,packet,policy}
by sending your posting email to Info-Hams, Packet-Radio, or Ham-Policy, all at ucsd.edu. To post to other newsgroups, send the posting email to (groupname)@ucbvax.berkeley.edu and for the groupname, replace periods with dashes.
For example, to post to sci.space, you would send your posting to sci-space@ucbvax.berkeley.edu.
All of the Amateur radio newgroups are archived on ucsd.edu under subdirectory mailarchives/{Ham-Policy,Info-Hams,Packet-Radio}.

** I don't have FTP capability at my site. Can I get files via email?
ANY BITNET, EARN, or NorthNET site can access the Princeton mail server. It will be most efficient if you know the complete path and filename for anything you wish to transfer, but you can use 'cd' and 'ls -l' commands to move about and browse the remote site's directories. The Archie database server may also be useful to search for files and their directory locations on FTP sites around the world (see below). Please be patient when using non-interactive mail servers such as BITFTP as each request may take several hours (or longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII

CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com (16.1.0.1). Commands include: REPLY
<mailaddr>, CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS,
COMPACT, UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>,
QUIT, HELP. Get the help file for more information by sending mail
with the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect uxc.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/Tech.v3.3.sit.hqx.Z
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

** Where can I find Anonymous File Transfer Protocol (FTP) sites that have
ham-related files?
Tom Czarnik coordinates a fairly definitive list of anonymous FTP
sites, their IP numbers, time zones, general contents, and access
policies which he posts to the comp.misc, comp.sources.wanted,
alt.sources.wanted, and news.answers newsgroups. It is itself
available via anonymous FTP (how about that?? :-) from (among other
places) pit-manager.mit.edu (18.172.1.27) under directory
/pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. Archie may be accessed by
telnetting to one of the following sites (use the one closest to you):

Finland/Europe: archie.funet.fi (128.215.6.100)
Canada: archie.mcgill.ca (132.206.2.3)
Australia/New Zealand: archie.au (128.184.1.4)
Israel: cs.huji.ac.il (132.65.6.5)
UK/Ireland: raquel.doc.ic.ac.uk (146.169.11.3)
USA (Maryland): archie.sura.net (128.167.254.179)
USA (Nebraska): archie.unl.edu (129.93.1.14)
USA (New York): archie.ans.net (147.225.1.2)
USA (New Jersey): archie.rutgers.edu (128.6.18.15)

Login is archie. Type "help" at the prompt for a description of all
server commands.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites:

ftp.cs.buffalo.edu (128.205.32.3)
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info and
the KA2UGQ worldwide BBS list on ~pub/ham-radio/phone_bbs_list

wsmr-simtel20.army.mil (192.88.110.20)
Keith Peterson, W8SDZ, has apparently returned as the
maintainer of this huge repository of ham-radio (software and
modifications), MS-DOS, and CP/M files. To find out how
to submit files to this archive, please read his informational
posts to the comp.binaries.ibm.pc.archives newsgroup. If you
cannot directly FTP from wsmr-simtel20, there is a mail server
that can help. Send mail with the text "help" to
listserv@vm.ecs.rpi.edu (128.113.5.11).

wuarchive.wustl.edu (128.252.135.4)
A "mirror" of the files available on Simtel20, plus a *LOT*
more. A more user-friendly Unix environment (plus a faster
net connection) makes this site preferred over Simtel20.
If you are on a Unix box locally, see if your system
administrator will "NFS-mount" these files for faster/easier
access.

ucsd.edu (128.54.16.1)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
and TCP-Group digests.

uxc.cso.uiuc.edu (128.174.5.50)
cd pub/ham-radio - This site contains the HyperCard Hamstacks
written by Diana Syriac as well as ASCII readable ham radio
question pools.

apple.com (130.43.2.2)
cd pub/ham-radio - Ham software and information, especially
MacIntosh software

ab20.larc.nasa.gov (128.155.23.64),
wolfen.cc.uow.edu.au (130.130.68.4)
ham radio files and software for the Amiga computer system

If you experience difficulty connecting to the above FTP sites, read
the telnet/FTP troubleshooting hints below or check with your local
system administrator.

** I'm having trouble using FTP....HELP!
The unfortunate situation here is that Netnews is far more prevalent
than direct Internet hookups, accurate name servers, smart mailers and
routers, and of course, telnet and FTP client services. What this
means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 137.48.1.1). The exact IP number
for the site can be obtained via the nslookup utility, if your
computer supports it....or check the FAQs. Your host may not
recognize the "fully-qualified domain name" (like
marvin.cs.buffalo.edu), but it should ALWAYS recognize an IP number.
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent.
* Syntax for telnetting from different operating systems differ.
Some common cammand syntaxes are: (angle brackets are for
readability, do not type these in literally)

Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>

telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* If all else fails, ASK your system administrator or check system
documentation.
* Compression techniques are different for different operating systems.
However, these hints should help: foo.sit needs MacIntosh UnStuffit
to unstuff; foo.hqx needs MacIntosh BinHex to uncompress; foo.Z
needs Unix 'uncompress' to uncompress or VMX compress_vms.exe (on
gatekeeper.dec.com) will work too. If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc.

** Are there any Telephone BBS's which have ham related files?
WB3FFV has one, phones are 301-625-0817 or 301-625-9482 or
301-625-9663. Data settings are 8 bits, NO parity, 1 stop bit.
Login is bbs, no password.
This BBS is also available via UUCP, login is uucpanon, no password.
For a listing of available archived, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit.

There is a comprehensive worldwide phone BBS list put together by
KA2UGQ, available from Simtel20, the Simtel Mirror on Wuarchive,
and the Supplemental Archives at ftp.cs.buffalo.edu.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by
volunteer hams and provide bulletins of specific interest to amateurs,
hence they are perfectly legal to rebroadcast on ham bands according
to FCC Regulation 97.111B(6). To lessen the load on the dialup lines,
consider getting your local repeater operator to rebroadcast it, or
tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly,
KC9RP, located in Illinois. The news is typically updated 8am CST
Fridays. Phone numbers are 1-708-299-INFO (299-4636) and
1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations
for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm
Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801

Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Are there any on-line callbooks and geographical name servers? Access to FCC databases?
If you are at an Internet site you can connect using telnet to one of the two primary servers:

callsign.cs.buffalo.edu (currently 128.205.32.4)
ham.njit.edu (currently 128.235.1.10)

There is also a general geographical name server at:

martini.eecs.umich.edu (currently 141.212.100.9)

The callbook servers sit on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd

quit

There is another email callsign server at n8emr!callbook@osu-cis. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n3jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns, separated by spaces. For Canadian calls, use the callserver at REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an OS interface to the MBL packet BBS using the Buckmaster CD-ROM callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet network, *NOT* the Internet. If you attempt to send Internet mail to this address, and use the old .NA suffix instead of the new .NOAM suffix, it will get routed to Nimibia (Internet suffix .na) which is currently paying a lot of money for misdirected ham mail. Help maintain a positive example for amateur radio and please do not attempt this!

The FCC "call sign hotline" at 717-337-1212 is available for those who wish to listen to the call signs allocated in each group for each district. This requires only a touch-tone telephone to use.

** Where can I find modifications for my radio to extend its capabilities?
Some mods can be found on wsmr-simtel20.army.mil or
the Simtel20 mirror directories on wuarchive.wustl.edu.

There is a new server at pcserver@novell.business.uwo.ca. Some examples of main body email requests are as follows:
HELP
SENDME RADIO MODS
SENDME TH215 MODS
SENDME ALLBAND MODS

There is a packet radio Mods Server. To get the directories, send a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warrantee and that these mods are NOT guaranteed to work.

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more

often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke%arrlhq.uucp@uhasun.hartford.edu) posts a definitive listing of ARRL exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
ARRL publications (i.e. conference proceedings, repeater directory)
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

In one example of someone's effort to bridge the information gap, there is a new repeater-mapping project which can automatically accept entries via e-mail. If you can get enough details about a repeater for a complete listing, you may want to help by submitting an entry. For more information, use the following e-mail addresses:

repeaters@wattres.sj.ca.us
Just send a message with only the word "help" in the message body. The project's software will reply with instructions.
steve@wattres.sj.ca.us
For other questions (Steve Watt KD6GGD)

As soon as the list is big enough to be useful, the project will make it available electronically. That will mean one less "why isn't it available electronically" question for the net.

Rec.radio.amateur.misc Frequently Asked Questions
Part 4 - Amateur Radio Organizations and Publications
------------------------------------------------------------------------------

Questions discussed in Part 4: (dates indicate last modification)
** How do I use the incoming and outgoing QSL bureau? (pre-4/92)
** Anyone know anything about the QSL Post Office? (pre-4/92)
** Are there any news groups for CAP? (pre-4/92)
** What's the name of the QRP club that issues QRP numbers? (pre-4/92)
** Can I send ARRL or W5YI electronic mail? (pre-4/92)
** "Why doesn't the ARRL do...?" (new 4/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I become a 10-10 member? (pre-4/92)
** How do I join MARS? (pre-4/92)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (pre-4/92)
** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
allocations and question pools? (pre-4/92)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 4--

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In
general, you send a bundle of foreign (not States!) QSL cards to
the outgoing bureau in Newington, Connecticut, along with a label
off of your QST magazine (which shows ARRL membership), along with
$2 per pound of cards (approximately 150 cards) or $1 for 10 cards
or less.

To use the incoming QSL bureau, you do NOT have to be a member of
ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7
or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached
and with your callsign in 3/4" letters in top left hand corner where
the return address label would go. If you expect a large quantity
of foreign QSL cards, attach extra money or postage with a paper
clip; do NOT affix extra postage to envelope. Send the envelopes to
the QSL bureau for your callsign area. If your callsign is xx3xxx/5,
you would send it to the 3rd call area, NOT the 5th call area.
```

Addresses for QSL bureaus are listed in QST (and below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for US Incoming QSL Bureaus:
USA 1 - W1 QSL Bureau, Box 216, Forest Park Stn, Springfield, MA 01108
USA 2 - ARRL 2nd District QSL Bureau NJDXA, POB 599, Morris Plains, NJ 07950
USA 3 - C-CARS, POB 448, New Kingstown, PA 17072-0448
USA 4 - All single-letter prefixes ONLY
Mecklenburg Amateur Radio Club, POB DX, Charlotte, NC 28220
others:Sterling Park Amateur Radio Club, Call Box 599, Sterling Park, VA 22170
USA 5 - ARRL 5th District DX QSL Bureau, POB 50625, Midland, TX 79701
USA 6 - ARRL 6th District DX QQSL Bureau, POB 1460, Sun Valley, CA 91352
USA 7 - Willamette Valley DX Club, POB 555, Portland, OR 97207
USA 8 - 8th Area QSL Bureau, POB 182165, Columbus, OH 43218-2165
USA 9 - Northern Illinois DX assn, Box 519, Elmhurst, IL 60126
USA 0 - W0 QSL Bureau, Ak-Sar-Ben Radio Club, POB 291, Omaha, NE 68101
Hawaii- Wayne Jones NH6GJ, POB 788, Wahiawa, HI 96786
Alaska- Alaska QSL Bureau, 4304 Garfield St, Anchorage, AK 99503

** Anyone know anything about the QSL Post Office?
The QSL Post Office is a private venture who also supplies QSL service as long as you let them put their advertisements in the envelopes. You can keep a SASE there in case you get cards returned via the QSLPO.

Instructions:
Send multiples of 10 QSL cards with check, cash or money order ($1 for each 10 cards).
Do not put postage on the cards.
Do not place cards in individual envelopes
Write callsign only in address area, or address as well if it's different from callbook.
Send to:
QSL Post Office
767 South Xenon Court, #117
Lakewood, CO 90228
303-987-9442

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However, rec.aviation is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. In addition, there is a mail digest just for CAP. Subscribe by emailing to capital-request@cps.udayton.edu. Submit articles by

emailing to capital@cps.udayton.edu. CAP related files are also
stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net, using the
address username%arrlhq.UUCP@uhasun.hartford.edu, replace username
as shown below:
Jon Bloom, KE3Z, Laboratory Supervisor jbloom
Ed Hare, KA1CV, Laboratory Engineer ehare
Rus Healy, NJ2L, QST Asst Tech Ed, Product Rev rhealy
Chunk Hutchinson, K8CH, Membership Svcs Mgr chutch
Bart Jahnke, KB9NM, VE Dept Manager bjahnke
Dave Newkirk, WJ1Z, QST Asst Tech Ed, Hints dnewkirk
Paul Pagel, N1FB, QST Asst Tech Ed, Tech Corres ppagel
Rick Palm, K1CE, Field Services Manager rpalm
Mark Wilson, AA2Z, QST Managing Editor mwilson
Tammy-Beth Zimmerman, KA1WWP, Membership Asst tzimmer
Technical Information Service, tech questions tis
DXCC dxcc
Awards (WAS, etc.) awards
Contests contests
Outgoing QSL Bureau buro

For other questions (ARRL policy issues, etc.), try
2155052@mcimail.com, which sends them to the front office.

The Washington Area Coordinator for the ARRL, Perry Williams W1UED
(sort of our "lobbyist" to the FCC and Congress) has mcimail access
at 2242662@mcimail.com.

Fred Maia, W5YI, another large VEC, also has mcimail access at
3511297@mcimail.com.

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. The e-mail addresses are listed
above. They want direct input - that's what those addresses are for.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones
(this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and
contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY
11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449,
FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet

70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655.
Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815,
(800) 365-SUBS - lots of special interest columns, like QRP,
ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 -
up-to-date information on Amateur Radio happenings, including
VE information and statistics

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter
band. It was first conceived when propagation was poor on 10 meters,
as a method to get more hams to use 10 meters. The past few years
have been great for 10 meters worldwide. However, "the bands are
closing down" again, and 10 meters will once again be limited more
for local communications, except for sporadic band openings, until
the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call
sign, operator's name and location. Send the list to your numeric
call sign or DX area manager (as shown below), with $5.00 U.S. new
membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N3FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided
they have transmit and receive HF capability for MARS frequencies
(they don't need transmit capability for Amateur HF frequencies). For

application forms contact:

Chief, Air Force MARS
TIC/DLTXM
Scott AFB, ILL 62225-6001
(618) 256-5552. Or, contact via Internet goes to
__daniels@server.af.mil, put "Pass to MSgt Trimmer" in subject line.

Chief, Army MARS
HQ, US Army Information Systems Command
ATTN: AS-OPS-OA
Fort Huachuca, AZ 85613-5000

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency.
The Radio Amateur Civil Emergency Service is a part of a municipal,
county, or state government. This does not mean, however, that
every such government has a RACES program. If your government does
not have a RACES, ask them to refer you to the nearest jurisdiction
that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it
thru 2155052@mcimail.com) and a book called "The ARRL Plan for the
Disabled", available at no charge from the ARRL Regulatory
Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try
directory assistance from the phone company or the locator service
provided by the Salvation Army. A Salvation Army post in your
local area may be able to help you. If you have his/her callsign
or name, you might also try one of the on-line callservers shown
above. Also, the Quarter-Century Wireless Assn maintains a collection
of callbooks going back to "the beginning of time". Their address
is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a
dial-in line for accessing new ham callsigns. Try (1-708-234-8011)
at 2400 baud.

** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
** allocations or question pools?
Part 97 is available by ftp from wuarchive.wustl.edu, file is
mirrors/misc/hamradio/part97.txt.

An ASCII copy of the question pools are avilable by ftp from
uxc.cso.uiuc.edu (128.174.5.50) in /pub/ham-radio/<class>-pool.txt.Z,
where <class> is novice, technician, general, advanced or extra.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive
these newsgroups as mail digests. Posting is also a one-shot thing.
If you post and someone missed it, it is gone. A better way would be
to announce the existence of your program here, along with
information on how to obtain a copy of your program. You can also
submit it to one of the FTP archive sites, which will allow the world
to access it without you having to mail it to each requestor. If you
just GOTTA post it somewhere, post it to more appropriate groups,
like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

Rec.radio.amateur.misc Frequently Asked Questions
Part 5 - Common Advanced and Technical questions
------------------------------------------------------------------------------

Questions discussed in Part 5: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** I'm confused. What do all those abbreviations mean??? (4/92)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(4/92)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (pre-4/92)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (pre-4/92)
** I got TVI...HELP!!! (pre-4/92)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies does JPL and GSFC retransmit the shuttle audio?
(pre-4/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** How do I modify my current Amateur license? (4/92)
** I'm confused about XXX, should I ask the FCC? (new 4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 5--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
```

tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version
of RTTY. Also used commercially as SITOR (Simplex Teleprinter
Over Radio).
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for
downed aircraft and missing kids and uses frequencies just
outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"

QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (next one is in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a
reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a "PL Tone." PL is "Private Line", a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for "closed" repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a "closed" repeater even if your radio doesn't
do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
Write to the ARRL and ask. They can usually tell you how to get a
license in your country.

If you know of any location where this information is available
electronically, whether by an e-mail server, anonymous FTP, or a
contact person, please mail it to us so we can include it here. Send

it to hamradio-faq@uts.amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another
** country or if I am a FCC licensed ham who wants to operate in another
** country (on vacation)?
You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and

time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.
* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class Amateur license. For more information, ask your campus education office or (for DANTES) your military education office.

** On what frequencies does JPL and GSFC retransmit the shuttle audio?
Station VHF 10m 15m 20m 40m 80m
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860

W6VIO 224.04 21.280 14.282 7.165 3.840
W6FXN 145.46
K6MF 145.585 7.165 3.840
All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - Jet Propulsion Laboratory (JPL), Pasadena, CA
W6FXN - Los Angeles, CA
K6MF - Moffett Field, CA

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?

Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** What is the standard for measuring Morse code speed?

The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or
one count every 240 milliseconds. 13 words-per-minute is one count
every ~92.3 milliseconds. This method of sending code is sometimes
called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location, change of name, renewal, or even change of callsign), submit an FCC Form 610 to the FCC. Forms are available from the FCC or ARRL or a local VE session or ham radio store. Do NOT use a photocopy. Check off the appropriate boxes, fill in the new/changed information, SIGN THE FORM, and attach a copy of your current license (or a brief letter of explanation for its absence, ie, "my dog ate it"). NOTE: If you check the box to change your callsign, YOU WILL GET A NEW CALLSIGN, even if all you wanted was to supply a new address; if you want to keep your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

** I'm confused about XXX, should I ask the FCC?
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result

of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

Rec.radio.amateur.misc Frequently Asked Questions
Part 6 - Special Topics in Amateur Radio questions
------------------------------------------------------------------------------

Questions discussed in Part 6: (dates indicate last modification)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (pre-4/92)
** What do I need to get started in packet radio? (4/92)
** What do I need to get started in satellite communications? (pre-4/92)
** What is available to get started in SSTV and WEFAX? (pre-4/92)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 6--

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 -
old radios, TVs, ham equipment, 40s and 50s radios,
telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q,
Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb,
NY 14469 - sponsors the Wireless Museum
See also the info on antique-radios mailing list in FAQ 2.

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112
(10504-524-2343)

** What do I need to get started in packet radio?
Packet radio is a digital form of communication using radios. There
are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use
packet radio, you'll need a radio (2 meters and 70 centimeters are
most popular), a box that converts radio signals to digital signals
that a computer can understand (called a TNC or terminal node control-
ler) and a computer or terminal. For some computers or TNCs you may
need special software as well. However, most TNCs and computers get
along quite well with just a terminal emulator software package. Most
personal computers can be interfaced to use with packet radio. Since
```

there are many digipeaters, generally even an HT will work with packet radio.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479). There is also a newsgroup, rec.radio.amateur.packet. See also the mailing list and archives info in Part 3.

** What do I need to get started in satellite communications?
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

** What is available to get started in SSTV and WEFAX?
A few years ago everyone bought a ROBOT 1200C for SSTV. To connect the system, you'll need the ROBOT 1200C, a color TV camera (either NTSC or PAL), a color TV set or monitor, speaker and mic connectors to your transceiver and a tape recorder for picture storage. For information write to Robot Research, 5636 Ruffin Rd, San Diego, CA 61927. A replacement PROM is available to give the 1200C other transmission modes, such as Wraase, Martin, Scottie, and AVT, available from Martin Emmerson G3OQD, 6 Mount Hurst Rd, Hayes, Bromley, Kent,ENG.

The ROBOT 1200C also has a parallel port for connection to a home computer, for transferring images to/from the 1200C, etc. Here's info for several programs:
IBM PCs: Hi-Res v1.4, Tom Jenkins N9AMR, 5968 S Keystone Ave, Indianapolis, IN 46227; SCAN v6.0, Bert Beyt W5ZR, 301 Tampico St, New Iberia, LA 70560; SSTV, Garnet Bebermeyer WB0UNB, 15 Almeda Ct, Fenton, MO 63026; and IMAGE, Dick Isely WD9GIG, 736 Fello St, St Charles, IL 60174
Amiga: Tom Hibben, Box 188, DeSoto, WI 54624

Two clones of the 1200C are available that accept the replacement PROMS: LM9000, John Wilson VK3LM, RMB 4201A, Tallangatta Valley 3701, Victoria, Australia (available as blank PC card only); and NS-88, Munaki Yamafuzi JF3GOH, POB 670, Osaka, Japan 531.

The only other standalone scan converter is the Wrasse SC-2, available from Volker Wraase Electronic, Kronsberg 10, D-2300 Altenholz, Germany.

There is some home computer hardware and software available:
Amiga: AVT Master (SSTV and WEFAX), AEA, POB C2160, 200 196th St SW, Lynnwood, WA 98036-0918; and a homebrew SSTV transmit program from Bob Salnic WA9BVE, Spkane, WA (salnick@DejaVu.spk.wa.us).
Atari ST: Atari Microcomputer Network, John Adams KC5FW, 17106 Happy Hollow, San Antonio, TX 78232; and ASTUR, GEERAERT Michel, W Elsschotlann 21, B-8460 Koksijde, Belguim. See 73 Magazine issues December 89 and January 90 for more details.
IBM PC: PC HF Facsimilie 4.0, PC GOES/WEFAX, Software Systems Consulting, 150 Avenida Cabrillo, San Clemente, CA 92672; and

MULTIFAX, Schwittek WEFAX Systems, David E Schittek NW2T,
1659 Waterford Road, Walworth, NY 14568.
A&A Engineering has stuff for both Atari and IBMs: 2521 W LaPalma, Unit
K, Anaheim, CA 92801 (1-714-952-2114).

Information on SSTV is very scarce, however, here's some references:
Amateur Television Quarterly, 1545 Lee St, Ste 73, Des Plaines,
IL 60018; The SPEC-COM Journal, POB 1002, Dubuque, IA
52004-1002; CQ-TV, British Amateur Television Club, Dave
Lawton G0ANO, Greenhurst, Pinewood Road, High Wycombe, Bucks
HP12 4DD, ENG; and ATVQ/A5 articles from ESF Copy Service,
4011 Celarview Dr, Cedar Falls, IA 50613.

1022. A prospective listener asks questions

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-15 10:49:33 UTC
From: richard@harlqn.co.uk
Message-ID: <RICHARD.92Apr15104933@bilbo.harlqn.co.uk>
Source record: 291046
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

I'm a regular radio listener, though mainly to BBC Radio 4 and the
World Service. Recently I noticed that the local consumer electronics
shop was selling these wonderful dinky broadband radio receivers (made
by Sony, I think). Beautiful little matt black boxes with lovely
round corners and pretty little round buttons; a masterful aesthetic
design. They're the sort of thing I could carry around _all_ the
time. Anyway, I haven't bought one yet.

I was thinking: with so many broadcasters on so many wavelengths there
must be _something_ interesting happening pretty much _all_ of the
time -- it's just a matter of tuning. Is this true? If it is, where
do I obtain the information about what is being broadcast?

I noticed someone mention the `World Radio and TV Handbook'. Is this
some sort of world-wide station and programme guide?

Please respond by mail. I'll post a summary of useful responses.

I can't quote parts stocking policy, but the standard wisdom out there is that Ten-Tec fixes anything, anytime. That sure gives me some comfort when I wonder how long the CPU will last on a $2,500 radio.

You may also have noticed that almost none of the manufacturers that made
ham gear in the fifties are still in business. Hammarlund,
Hallicrafters, Johnson, etc are all GONE. I certainly think it's fair to
point out that you can't get these parts anymore, but to sell all your
working radios because of it is just silly.

Source record: 291049

I hope this isn't another example of 1% of the population telling
the 99% what to do 'cuz you're request wasn't honored.
I have 2 (two) Icom HT's and a mobile rig. The IC-2AT has been suffering from
salt corrosion but last weekend still functioned fully. Three times it's been
cleaned with WD-40 and that helps. The other is a perfectly fine ICW2A that
travels only in a plastic bag near the ocean. Tens years is a lot from a
hand-held. I really don't feel that ICOM is deliberately holding parts
from you and maybe you're best bet is to find a junk one and hope that the
CPU is OK. But you're attitude that everyone else has to 'jump on your
bandwagon' inspite of the fact they haven't experianced your problems isn't
right. It's a caveot, but not a solution, since you can walk right into
more and different problems from another manufactuer.
In 15 ICOM-YEARS I haven't had any non-rational problems.
de Skip, NT1G 13 years running a C.E.100V with NO manufactuer support!

About two years ago, (pre N.Y. Times arcticle) I had found an old
Heathkit Shortwave Receiver at a hamfest for five bucks. Tubes checked
out ok and it squeaked and crackled some, so I wanted to check alingment;
I called local Heath\Zenith store and they gave me an 800 number I have since
lost (try 1-800-555-1212) and I chatted with a very nice person where upon I
found that Heath manuals (copies) are (were) available directly from Heath!
They leave out the "Strip 1/4" from the 6" red wire..." stuff when they
copy the manual and there was a max charge of like eight bucks or something
- far less than HI-Manuals gets for his stuff. I'd try thay route before
springing bucks to Council Bluffs. If all else fails he may be the only
source - but he is pricey (but fast). I have bought eight or ten manuals from
him. Glad he's there - . 73 and DX de KA2Y k

1027. TRIO TR 2200 GX circuit diagram or manual HELP

Newsgroup: rec.radio.amateur.misc

Along the same lines as the Benton Harbor Lunchbox series, does anyone remember the Gonset Communicator series and their SSB version the Sidewinder.

I think they were actually BHLB's they had grown up slightly, they had the same general shape but, weighed about 50 to 60 pounds. There was a 10, 6 and 2 meter versions of the Communicators. The only Sidewinder I saw was at a field day in 1969 that the Dayton Amatuer Radio Assoc. sponsored, it was a SSB rig running about 25 to 50 watts. I am not sure that this version was for any other band than 2 meters.

Source record: 291053

>Shouldn't someone check on who employs the guy who started this? Could it be
>Yaesu..... or Kenwood.... or..... ?

Especially since it started on Packet - a most unreliable source for facts.
See page 5 of #623 of the Westlink Report for an article titled "MFJ Suffers
from Digital Dirt". I can understand why Icom may not have some extra
custom parts around, but as far as it can be determined only a couple of these
folks posting have actually dealt with Icom in regards to service.

One of the biggest things on the Engineering R&D plate these days is working
around obsolete parts to support ongoing production and previous customers.
There are a couple of guys locally attempting to recreate the spread spectrum
handbook radio and there's a special divider that can't be found (so far
anyway). sure you can develop the same function out of available parts but
there's an example of a part that was available and later cut from production.
Equipment manufacturers try to hold the ethical high ground of long term
product support but it's undercut by piece part manufacturers that seem to
drop and add products more often than they change their shorts.

Anybody going to beat up on Texas Instruments for discontinuing the 9900
microprocessor? Does Intel still make a 4004? Collins doesn't make S-Line
or KWM-2's anymore. And you can get replacement for most discrete parts, but
they aren't exactly the same -- tubes are a great example of the one size fits
all approach to substitution.

Sony has done an excellent job of supporting their consumer Beta VTR customers
in that only in the last year have commercially pre-recorded tapes bit the
dust. The local Wal-Mart has several rows of L-750s at reasonable prices and
they sell regularly. (If they had only been as wise during the initial years
of home recording...). Of course, w/o the industrial/TV station business as
well as the company taking the format wars personally, the Beta VTRs could
have been out there with the Cartrivisions a decade ago.

I'm amazed that the big three can agree on antenna connectors. But i won't be
surprised if next year or maybe this year we could start seeing the same sort
of nonsense that's ruled microphone and power connectors applied to the RF
connector. And we're lucky that the connector manufacturers haven't decided
to obsolete less-than-perfect connectors like the UHF series.

Not many. The cost of repairs these days make most appliances (TVs, VCRs, microwaves, stereos and even radios throw-away items.)

>I remember hearing somewhere that somebody made a digital radio a few years
>ago that had the custom microprocessor code stored in battery backed up RAM !!
>If this is true, then what is someone supposed to do when the battery fails

This somebody you refer to is also Icom! I own one. I no longer purchase Icom equipment. That is one reason. Another is higher pricing for equipment which has not proven to be particularly trouble free in use at my station. I don't know about most people on the net, but I cannot afford to spend over $1000 on something that is PLANNED to be obsolete some time later!

I've worked for a large Japanese company for four years. I worked in repair, field support, and documentation. The Japanese consider after-sales support to be a necessary evil, not an investment in the future.

Trying to get the custom made parts out of Japan was hard even for us and WE WERE PART OF THE COMPANY!!!!

Wake up, American companies!!!! This is your chance that you can show that we can do something a lot better than the short guys across the pond. A lot of customers base their next buy
(whether it be cars,
microwave comm systems, SATCOM systems, computers, etc.,) on what kind of support they got from their last purchase.

IC2-AT... My first 2m handheld. I traded an 8" floppy drive for it in 1980. (It was purchased new from Craig Radio Company for $250. Ther is no date on the invoice.)

It is still sitting on my file cabinet tuned to 145.07 where it faithfully does packet, 24 hours a day.

Now I have a Standard C228A for both 2m and 220 MHz. It's reasonably sized, just a bit bigger than an IC-24AT and has lots of bells and whistles. Of course, I can hardly work it :-) I know all the basic stuff, but if I want to turn an esoteric option on or off, I need the manual, and heaven help me if I accidentally hit the wrong button. If I don't remember what I hit, and the significance thereof, I won't know what I did until the radio behaves funny. A good example of this is turning the scan mode from "wait until channel clears" to "wait a few seconds then go on."

Nonetheless, it's nice to have a rig with some memories and a scanner... and the IC-2AT is doing really well on packet.

I have been using the KAM 5.0 (and KPC-2 5.0) for a while now. The KAM 5.0 finally fixes the AMTOR/BAUDOT/ASCII (basically the non-packet) modes so that they can be used without getting the double line feed problem! This is a significant release. This release also implemented several other changes that make the KAM much better.

> The question is: Am I able to do a program which duplicates HostMaster
> in this respect? I already have a "homemade" program which I use to
> run my KAM, but does Kantronics include sufficient documentation to
> make it work with the new version? Or does anybody here have this
> information?

Well... Yes and NO. The information is there, although it is not step by step instructions. You will have to figure out most of the details your self. You have to communicate with the KAM in its HOST mode (this host mode is NOT compatible with other manufactures host mode, seems each manufacturer has its own protocal for this). The KAM's host mode is very much like the KISS protocol that almost all TNC's these days can speak.

I have implemented a conference bridge in host mode (similar to the 'CROWD' nodes) that allows mulitple operators to talk in a round table discussion. Host mode works fine (they fixed a few minor bugs in it with this 5.0 release).

5.0 also provides major new features to the PBBS. It supports many new (and useful) commands similar to the 'W0RLI' style BBS's. It also allows an HF AMTOR station to connect to and use your PBBS to leave messages for you or others!

In short, if use use the HF modes of the KAM, get 5.0. If you make use of its internal PBBS, get 5.0. If you want to program for HOST mode, get 5.0. If you are happy with the KAM as you now have it, and don't need the new features... save your money.

By the way, a local ham store is selling the 5.0 update for $30.00, this includes the new ROM, a lager EEPROM, and new manuals.

(if you can't tell by now, I like the 5.0 update!)

If they would only implement Farnsworth CW spacing!

Hope this helps,

Rich

>a 144/440 antenna also!
>

I built the J-Pole version of the Copper Cactus. It appeared in the
Feb or Mar copy of 73 magazine. On two meters it works very well. I
measured SWR of 1.1:1 on 2m at the antenna feed point. Signal reports
are good too. On 70 cm band the SWR was too high - abt 3:1 or so. Since I
plan to use it only for 2m packet, I did not bother to tweak its performance on
70cm. It took abt an hour to build and cost under $10.

>and other assorted prone-to-failure components for all of their radios as
>long as they were in business. How hard is it to stock extra IC's?
>

It's not as easy as you think. Many of the IC's are custom, built
specifically for ICOM, and the production lines for these IC"s have
long since shut down. Hauling out the old tooling and starting up
a fresh batch of an obsolete IC (which the military does quite frequently)
costs big $$$$. Are you willing to pay $200 for a new chip for a
$300 radio?

I didn't think so.

The alternative would be for the manufacturer to buy an oversupply
of the IC's while they were still in production. Perhaps 1 extra
IC for every two sold in radios. But guess what... as usual, we
consumers will end up paying for it in higher new equipment prices.

Not many IC's have a production life of more than 7 years. Memories
IC's are even shorter. The military, for example, sometimes has to
take Megabit DRAM chips and place them in 64Kbit ram packages, wasting
the extra capacity. The alternative (replacing the system they go
into) is just far too expensive, even for them.

The real solution to this problem is for the manufacturers to stop
using custom IC's and instead use off-the-shelf components. At least
there would be some hope of getting replacement parts in the future,
even if out of an old toaster oven :-). But, alas, it is still too
expensive to use a separate CPU and EPROM when a mask programmed
CPU+PROM chip is cheaper.... Like it or not, that's the way things
are going to stay...

|> up to what 10, 20, 30? Years, what would you call a reasonable amount of
|> time? And how do you accurately judge the volumes that should be held in
|> stock?

I think the price of the original unit and replacement unit has to be
considered in how long a company should stock repair parts. I can see
where it may not make sense to keep a $100 CPU for a $250 radio which
is probably the case for most single band HT's. In this case it is
probably more reasonable to replace the entire unit.

But, HF rigs can easily be $1,000 or more. In this case telling me
I have to toss my radio and spend >$1,000 when a $100 part is broken
is not acceptable. I'd be a rather irate owner of an IC785, or whatever
number the big $4,000 HF transeiver with the CRT is, if 10 years from
now I had to toss the entire thing in the trash because an ASIC that
should be around $50-100 dies. Given that this is a hobby, I would
expect a $4,000 radio to be usable and REPAIRABLE for more than a
decade (not that I would ever spend that much on a radio).

CC: DUBE
Subj: Boycott ICOM (fwd)

If everyone followed suit and boycotted every manufacturer who can't support their product with parts after 10 years, there'd be precious few manufacturers left. The ones who stayed around would be using "standardized parts" to build "standardized" items which, like the VW beetle, would all look and act the same year after year.

If you want new, state-of-the-art technology, then you have to pay the price that goes with the fact that as technology advances, the "old" gets left behind bacause there's not enough time, space or money to take care of both

You can find some parts for your 1950s radios, perhaps, but if it uses a type 14Q7 tube, or a knob, or an IF transformer (these things shrunk in size from over an inch square by 3 inches long to a half inch square by about 2 inches long with advances in technology), then good luck! Or, try finding a .05 uf at 450 volt capacitor at your nearest parts store.

Amazingly, it sees to me that one of the things that technology advancement has brought is reliability. Considering all the things that are in today's equipment that could fail, it's amazing that something would go 10 years without failing. Put another way, technology has helped to foster the "throw-away" concept by increasing the life-expectancy of things beyond that of stuff 30 or 40 years ago, to the point where it gets questionable if an item is worth the cost of repair/parts. It's no wonder to me that many manufacturers won't fool with stocking specialized parts beyond 5 or 10 years.

GEt a plain-jane radio. Then if it quits after 10 or 15 years, you can get plain-jane parts to fix it.

Source record: 291067

I know the issue is getting worn by now, but there is another consideration to the maintaining of radio parts for 10 or more years that hasn't been mentioned. Radios today are full of components which are getting smaller & smaller. The time is quickly approaching (some say it's already here) when fixing an old radio won't be practical at all. The chip components can't be touched with a standard soldering iron, and the size is still shrinking. We have arrived at the age of the disposable radio. Personally, I believe that if your $300 radio lasts 10 years, you got your money's worth. Now, about that $1000 radio.... That's another matter entirely!

I want to preface this post by stating clearly that this is a personal opinion.

I am not sure if I would blame any manufacturer that is in the pickle that Icom is in here. One thing I have learned about electronics in the 1990s is that components, especially ICs, can be obsolete and un-available almost as soon as they are in production. I went through some very disappointing instances as I tried to keep the 1988 ARRL Handbook 500-MHz frequency counter alive. After the third component went out of production, and thus almost impossible to find, I gave up. We are dropping the project from the next edition of the Handbook.

I agree that manufacturers SHOULD keep parts in stock as long as possible, at least the active devices. But sometimes this becomes impossible. If a part is no longer available, there may be nothing the manufacturer can do. Also, I don't expect them to keep each Flannagin-pin mounting bracket or tuning knob available forever. There has to be a limit.

I don't know exactly what may be going on with the company cited, but I did want to point out that there may be another side to the story.

>of the failure of a unique component that the manufacturer can't or won't
>provide. That's NOT very good public relations for ICOM.

Many "pre-solid state" owners are soon going to be in a world of hurt
too. The last supplier of quality vacuum tubes, the former Soviet Union,
has finally stopped production. You need a 6L6? All that's left is what's
on somebody's shelf.

Technologies change so rapidly today that the cycle of obsolesence is
becoming shorter and shorter. In my business we've had to spend a lot
of money replacing perfectly satisfactory equipment because repair
parts are no longer available. Things like RTL and DTL gates. We can't
blame our equipment manufacturer, he can't get the parts anymore either.
And it wouldn't make any sense for him to attempt to stockpile parts
for a small production run because he'd wind up eating most of them,
and we'd pay for it in higher equipment cost. Just_in_time manufacturing
methods guarrantee that a manufacturer doesn't carry a large inventory
on hand that drives up his fixed cost. He depends on *his* suppliers
to replace an in house inventory system.

With the trend to custom mask programmed CPUs and custom logic arrays,
the parts situation isn't going to get any better for equipment produced
in small volume. For manufacturers like the auto industry where unit
volumes run in the millions, keeping a spare parts inventory is less
of a burden. But for a small volume producer like a supplier to the
ham or broadcast market where unit volumes are in the hundreds or
thousands, it's an impossible task.

I believe that manufacturers should release into the public domain
the source code to discontinued custom processors and the fuse patterns
to discontinued gate array products. That way if a person wants to repair
a piece of gear badly enough, he can engineer in a retrofit that will
replace the functionality of the no longer available part.

The fact remains, however, that the shelf life of electronics technology
is now down to less than 5 years in many cases. It's generally not worth
the trouble to attempt to repair something older than that because newer
and better equipment is available that is cheaper than the original. This
isn't planned obsolesence, it's technology driven obsolesence. Try to get
parts for an 8 inch floppy drive, or get 1 kb memory chips. They just

aren't around anymore except in surplus bins. Ten years ago, they were hot stuff.

I have a Gonset Sidewinder 6. I don't remember if that is the official model name, but that's what it's commonly called. It is a 6-meter AM/CW/SSB transceiver. It is mostly solid-state (germanium PNP transistors) with three tubes in the transmitter (mixer, driver, and PA). It is VFO controlled with RIT and also has built-in sockets and switching for 4 crystals if you want the transmitter rock-bound. If I remember, the PA input is about 20 watts (the PA tube is a 6360 (?)). The manual is dated some time in the 1960s.

If anyone is really interested in the hard facts, I could bring the manual in to work and make another posting. It's certainly not the greatest rig, but I like 6 meters and the price was right: free!

There were two "Benton Harbor Lunchbox" rigs. One for Six Meters (Known as
the "Sixer" and one for Two Meters - The "Twoer". They ran about 5W, AM, with
super-regenerative receivers. They were crystal controlled using overtone
crystals (I remember converting my six meter version to use the much less
expensive (at the time) and much more readily available 8Mhz crystals.
I haven't seen one for years, but I'd bet any amount of money that you
could find both at Dayton in a couple of weeks.

This is quite a shame, but you can't blame just the Japanese. The U.S. tax laws were changed during the Reagan administration, to discourage companies from keeping large amounts of stock on hand. The first thing companies did was to get rid of all those ancient spare parts inventories. This was not a good thing from our point of view, because a lot of those components were irreplaceable.

>expensive to use a separate CPU and EPROM when a mask programmed...

I beg to differ! An EPROM of the size that exists in mask programmed
parts costs about $1.50 in quantity. The MOST that the addition of
an EPROM could cost them is about $15 in the price of the radio.

That's a 10x markup! You would think they could live with that. I would
guess that the real reason for using custom CPU's with mask roms is to
keep the other Japanese companies from stealing the radio's firmware.

As I understood the program I saw on PBS's NOVA last night, the Japanese
culture and laws allow you to steal your competitor's designs so long as you
lie about it, and say you didn't do it. (the explaination was that if your
competitor has a capability (idea) that you don't have, it would be rude of
him not to share it with you. Therefore you must help your competitor not to
be rude?)

>I'll have to remember that. Any other hints anyone would care to share?
>Besides: practice, practice, and practice some more...

- Realize that every number, letter, punctuation mark, and prosign is used at least once. If you got the callsign as "N?AL", check the rest of the text to see if any of the numbers 0-9 are missing.

- Both callsigns are sent twice, once at the beginning and once at the end. You get two chances to get these right.

- When done copying, go back and fill in anything you missed -- guess if necessary. If you fail to get 75% of the questions, the examiners will check your copy to see if you got 1 minute without errors.

- Concentrate on the numbers: Many of the questions are about RST, transmitter power, etc. Also, numbers count as 2 characters when computing the "1 minute solid copy".

- Don't leave any questions blank on the test sheet. Wrong guesses don't count against you.

Nicads need to be used frequently, never allowed to overcharge, and never allowed to discharge to the point of reversing a cell. The packs should be made up of carefully matched cells. This will give the longest battery pack life because all cells will run out of charge at the same time.

If you only use your radio infrequently, your best bet would be to get the 6 AA cell battery pack, and use alkylines in it. The alkylines have about 10x the A-H capacity of a nicad, and also have an extremely long shelf-life.

I doubt there are many full-custom IC's in amateur equipment. The CPU
in question is probably one with a PROM on board to store the program.
Most likely ICOM buys blank ICs from the manufacturer and programs them
themselves. Even if they buy them pre-programmed from the IC vendor,
I doubt they pay more than $5 or so each, so I don't see why they can't
buy a hundred extra parts to use for spares. (Maybe they did, but the
part has a high failure rate!)

1058. GE Mastr HT's

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-15 19:36:05 UTC
From: djb@mailer.cc.fsu.edu
Message-ID: <1992Apr15.193605.27928@mailer.cc.fsu.edu>
Source record: 290882

I just purchased a box of misc. junque at a government auction. Included in the box were two GE Mastr HT's. Does anyone have a clue on how to find out what frequency these things were built for? The units have a 4 line data plate. The first line on one reads 65KGWG?X. The second line is 816163524. The third line is R(or K)T105-A. The last line reads ER60-D. The unit has a "mother" board and several "daughter" boards. One of the daughter boards has nine "modules" on it that look like long Xtal packages. These modules have 5 pins soldered onto the board. There is nothing that looks like a standard xtal. They THey do have TT pads installed. The TT pads are mounted to the case with double stick tape, and lead into the case via a ribbon cable. The ribon cable leads to a long package encapsulated in heat shrink and which has three wires leading out of it. A red, black and green. I assume that red is B+, black in gnd, and green is signal.

Anyhow...any hints or ideas on this would be more than welcome.

1059. IDEAL FIELD DAY ANTENNA IS...

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-15 19:54:02 UTC
From: derry@NeXTwork.Rose-Hulman.Edu
Message-ID: <1992Apr15.195402.8032@cs.rose-hulman.edu>
Source record: 290883

Thoughts on the IDEAL FIELD DAY antenna.

As Field Day nears some thoughts have been going through my head in terms of what the ideal FD antenna is. Long John Yagis on 60-ft towers don't seem to be my idea of a good practical FD (Emergency) antenna.

Some very desirable properties...

1. Multiband, i.e., 160 through 10 (or 6?) meters.
2. Transportable in the trunk of a car.
3. Easily erected by ONE man (person?).
4. Easily repairable in the field.
5. Does not rely on any other structure other than itself.
6. Made of easily obtainable inexpensive components.
7. Rugged enough for the job in question, i.e., FD.
8. Balanced lowloss feed system, such as twin lead or ladder line.

Any antenna which possesses these attributes will be capable of making FD a more pleasant experience. Most folks forget about the tearing down on their antennas after FD is over. This chore usually comes at a time when the participants are VERY TIRED. The antenna should be as easy to take down and stow as it is to erect!

We use an antenna which meets the specs shown above for FD. It's a 130-foot center fed Zepp erected in an inverted vee configuration with the center at 30 feet. The mast is made up of six 5-ft sections of TV mast. It is arranged like the one-man multidipole antenna in the ARRL Antenna Manual. The feed line is low loss TV 300-Ohm Twinlead. The matching is accomplished by a Tee network transmatch with builtin balun.

It is very effective and loads well with the transmatch. Since it is a balanced antenna and feed system, rf ground requirements are not critical. I heartily recommend this type on antenna for your group to try on FD in June.

Ok, try this one guys. remember the G66 and G77 Gonset twins, sometimes called the Gold-dust twins? don't know if the nickname was caused by pricing at the time. both were tube type, receiver g66 and transmitter g77. chrome plated front and cabinet. real compact and made good mobil rigs.

late 1950's era radios.

trivia question. who was the first US amateur to run 1KW mobile?

My immediate reaction was pretty much like your's 'Come on lets
be realistic about this...' etc But on second thought maybe you're
right. If this catches on I could pickup some good used gear cheap.
In fact if people get really mad at ICOM they'll give it away :-)

Source record: 290888

Hello world.

I just passed my novice exam (!!!!!!) on 4/7/92 and am almost ready to take my Tech exam. I hope to have my CSCE to operationally upgrade (and mail a new 610) the day I get my Novice ticket in the mail. (I was going to go no-code but the class I got into was teaching a traditional Novice, so, what the heck. It wasn't *THAT* hard.)

Now I have the quandry of what to buy first. I posted in .swap for a 220HT but the feedback I got makes me wonder. The two issues are
1) HT vs. mobile
2) 220 vs 2M vs 440.

As for 1) I like the idea of an HT but the greater power/range available with a mobile is something to consider. I know that an HT can be made "mobile" easier than vice versa, but someone argued that doing so means ultimately replacing most if not all of the connectors from connect/disconnect abuse. I have been following the short ;-) thread on the reliability of HT's and the fact that while some broke from being sneezed on, others have survived tanks, bullets, salesmen, floods and other things that neither Samsonite nor Timex would try. I've heard others say "I replced this button twice, the faceplate once, the BNC three times, this clip twice..."

As for 2) some people say 220 is on the way out. Others live and breath 220. There is a 220 repeater 8 miles from my home with a phone patch (and two frequence agile remotes 2M and 440) and it is linked to another 220 repeater that sits on top of the building I work in. So it seems that 220 would probably get me everything I need for now, but... for how long and will it be enough in the semi-long run? Am I just plain wrong? Will Luke marry Laura?

Others have talked up 2M and 440 a lot. I have seen 2M/440 dual band HT's and mobil units but they are a bit pricey for me right now. One person mentioned a 220/2M dual band (by Standard?). I have a semi-firm budget of $215 and Deerfield is comming up soon!

Suggestions/comments/flames welcome via e-mail (or post if you think enough others might be interested). I would be glad to summarize or cc. Related war stories are welcome too, but only via e-mail, please.

*The computer missed the following call signs and they are loaded in the
following sequence:

After N3LZZ is issued Group C Blocks N3BSA-N3BZZ will be issued.
==========

For more information about the call sign assignment in the Amateur Radio
Service, see Section 97.17 (f) of the FCC Rules, or write to the FCC,
Consumer Assistance Branch, Gettysburg, PA 17325-7245.

This list is updated monthly by
Mark WB1E @ K1RQG.ME.USA.NA
WB1E @ K1RQG.04416

NOTES:

District 3 Group D calls will soon be advancing to the KB prefix block.

District 5 Group B calls will soon be advancing to the KJ prefix block.

District 5 Group C calls are almost depleted and will move into the Group D
series, as districts 4 and 6 have done. (According to the FCC fact sheet, they
should move into the W prefix for Group C, but apparently the FCC is not using
them. I don't see how they could anyway as they would look like the old W 1x3
calls).

73 till next month...

>--scott

I had a twoer which I modified myself for FM. As I recall, I paralleled a number of cheap rectifier (5 cent variety in onesies) diodes, and with a blocking cap setup used it to change loading on the crystal oscillator. I don't remember if I had to change the oscillator much of any. I reverse biased the rectifiers and imposed audio onto it. You get the general idea. This was quite some time ago -- and I was using one of those $20 multiband AM/FM/SW receivers which I listened with. Talk about a cheap setup. :-) Costed nearly nothing, but it worked (around 15 years ago I think).

I sold the Two'er, kind of wish I had it back for nostalgia sake (and to go with the ancient SB line I still use occasionally).

Does anyone out there have information abouth the complaint LARC filed
against the ARRL, according to the new Oscar Satellite Report?
There are several new hams around here who could make a decision to
NOT join the ARRL around this issue.
I would be interested in hearing the ARRL's official word on this,
also.

I have had one HT and a couple parts orders from ICOM. I had a problem with one of the parts orders, and it was corrected quickly and pleasantly. I am very happy with the service I have received from ICOM.

There are good and bad employees in every business. If you have a problem with a specific person, the company needs to know the person's name. Telling them that they have "poor service polices, etc." will do nothing.

Do it right or quit your bitching.

Interesting ... I have not heard of any such complaint. Can you give more information when you get it? I notice that a Lambda Amateur Radio Club advertises in each issue of '73, but I never see their adverts in QST. When I saw the Subject header of the original message I thought it regarded the ARRL possibly denying LARC advertising in our journal (I am a member.)

But, you say it's over an OSCAR satellite report? Could this be another LARC? Tell us more when you know it. It could affect my decision to renew.

(to the original poster)

Please clarify this for me: You get _Eleven_ years of service from
something high-tech, and then are dissapointed when it fails and
is declared obsolete?

If it were up to you, would you rather have the manufacturer
allocating their finite budget to preserving 1981 technology for all
eternity, or to moving forward with the times? After all, it was
somebody's _engineering_ budget (not antique parts inventory) that
gave you a microprocessor-controlled radio that lasted for more than
a decade.

Why don't you just give it decent burial, pick up something else at
the next swap meet, and get back to life?

I have not yet owned an Icom radio. After reading that they last so
long, I will have to seriously consider one for my next purchase.

I agree with you. But in a couple of yers there are probably no longer hard
disk drives which will fit in an XT or they will be so expensive that no one
want to buy one. In the second case the factories would stop to build them.

> Backwards compatibility is required in software design; why not in
> hardware?
We have got this compability in the PC sector and in my opinion it is the worst
thing what can be done in building hardware. Nevertheless if there is a good
solution in the hardware the next generations can take benefit from it. But the
manufactures should be allowed to improve their products.

Message-ID: <1992Apr16.110236.29068@cc.tut.fi>
Source record: 290899

But one thing is sure, I'm not going to buy any Yaesu handheld!
I've had two, ft-23r and ft-470, and both had once (or more)
fallen from table, pocket or some other place.

Both are still broken, that little battery-release-switch is broken
in both of my rigs and I can't afford to buy new ones. One year ago
Those were not availlable here in Finland, but now You'll get those
if You are willing to pay enough! Can You imagine that little piece
of plastic costs 120FIM (abt. 30 USD)! Well not exactly, You'll
receive more than that button , but if all You need is very little
button, why would You buy some other (bigger) part and pay lot more!
They simply are not selling only that part I need, and I really am
not going to buy "half radio" if I don't need!

And it seems to be very common trouble, all of my friends here has
same trouble with their Yaesu handhelds.

>
>Bert Hyman W0RSB
>bert@rsvl.unisys.com

Bert, about the only thing that you can do, other than giving the batteries an hour or two of charge once every few weeks, is to fully charge the batteries, remove them from the H/T, and place 'em in the freezer section of your refrigerator. This will slow down the self-discharge rate of the cells. The self-discharge won't be completely stopped, since the potassium hydroxide electrolyte won't freeze at the temperature of the average freezer.

You might want to review my article on NiCad batteries in the Feb issue of QST.

>- Both callsigns are sent twice, once at the beginning and once at the end.
>You get two chances to get these right.

It's funny - when I took the 13wpm, I only got part of each callsign, but
the test was multiple choice, and I was able to figure out the callsigns
correctly. Last Saturday, when I attempted the 20wpm, I got both calls -
but they weren't on the test! :-(

>- When done copying, go back and fill in anything you missed -- guess if
>necessary. If you fail to get 75% of the questions, the examiners will
>check your copy to see if you got 1 minute without errors.

I surprised myself when I got 1 minute at 13wpm. I'm a slow writer!
so it takes a lot of guessing. :-) But, hey, I'll try anything...

>- Concentrate on the numbers: Many of the questions are about RST,
>transmitter power, etc. Also, numbers count as 2 characters when
>computing the "1 minute solid copy".

They must be on to this; the only questiosn involving numbers were RST
and temperature. They came up with some weird stuff, like the person's
occupation, or his dog's name, or something like that. (Hey, I don't
want to be giving away the actual questions, in case anybody else gets
this particular test.) Naturally, I was concentrating on names, calls,
rig... *They* told *me* what the rig was, and asked something else about
it (I got that one right, anyway!)

>- Don't leave any questions blank on the test sheet. Wrong guesses don't
>count against you.

Sigh....even my guessing needs practice! But I am going to pass this thing
if it kills me! What's more, I'm going to (eventually) actually be able to
copy well at 20wpm, not just pass the test. Sheer bull-headedness got me
this far, it will carry me through to Extra!

Thanks for the suggestions. I'm saving them all, so keep 'em coming!

Icom (UK) might like to try tendering to supply some new business radio systems to the emergency services here in the UK.
The last invitation to tender I saw for such things, (admittedly about 5 years back) required that the supplier hold 'adequate spare and replacement components' for a period of FIFTEEN YEARS from the date of signature of contract.....So much for built-in obsolescence. Of course you could argue what constitutes 'adequate' spare parts....

>are going to stay...

Time for another Ten-Tec plug... The Paragon, thankfully, does not have
any custom silicon in it. Ten-Tec opted to go the generic uP with "detached"
eprom route. In fact, they have already given me one free software upgrade
during the warranty period, and I have no doubt that they will provide that
service into the future. Granted, the uP and ram chips are getting dated,
but they are made by Motorola and are soooo easy to find. I'm collecting
spares right now... Even the fluorescent display is relatively generic,
having no special symbols or anything. There are no nasty surface mount
components, which partly explains why the radio is big enough to have
"real" knobs that a "real" American male hand can grip. I could have bought
a TS-850 and had newer technology without question. The Paragon really did
what I needed, so I spent my $1800 on maintainability. Oh yes, they give
you the service manual with the radio purchase.

Well, if we're talking state-of-the-art, then lets not worry about ICOM 735's, 725's, 751's. They were/are neat radios, but not anything to base a cutting-edge technology talk on. About all we can do is discuss the ICOM 781 (and I still don't think that's state-of-the-art technology, just state-of-the-art consumer affairs). But does your concept apply there? $5,000 for 10 years. Should I expect to throw this radio away in the year 2001 because I can't get a replacement CPU chip? Or do I have to buy two radios to be sure I can keep one going? Can't buy it (the radio OR the "throwaway" concept).

This is my personal opinion on the matter and nothing more.

If a manufacturer were to guarantee that it would retain parts for repair indefinitely (or say 15 years), it would be forced to purchase or manufacture those parts to cover that period of time. The cost associated with such over-production and subsequent storage and cataloging of those parts must be paid by someone. The manufacturer won't wait until he sells a replacement to collect his due. You will pay, _up front_, in the form of a premium on your new radio, which may never require repairs.

To be sure, hams are known as a frugal bunch, as are amateur photographers. Manufacturers are faced with using every method at hand to keep prices low and perceived value high. This generally means packaging only what's absolutely needed with a product (except, of course, batteries) and forcing the buyer to spring for any "required" accessories.

As a result, manufacturers must consider the "life cycle" of their product. Sure, it would be nice to buy a rig and have it last forever and lots of them do. In my opinion, that's not realistic because new features, technology and product size make me yearn for a new one anyway. If my $1000 radio only "lasts" ten years, I figure it only cost me 100 bucks a year. I pay far more in taxes than that and I get _far_ less in return :) .

1083. Re: Can't get 10 year old radio fixed

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 12:48:35 UTC
From: benjy@benjy.cc.vt.edu
Message-ID: <3762@vtserf.cc.vt.edu>
Source record: 290907

I bought a 10 year old Ten-Tec Omni C in January. Before purchasing it, I called the factory to see if they would still service it. They still provide service for this radio. I was pleased to find that I could still purchase accessories for the xceiver such as mics, WARC band crystals, filters, etc. Now the Omni C doesn't have a custom microprocessor (or any microprocessor for that matter), so it may not be as hard for a manufacturer to support it over a period of years as would be the case with newer rigs. But it's still good to know that I can get service for the rig if I ever need it.

1086. ICOM obsolescence

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 14:10:45 UTC
From: bruce@merlin.think.com
Message-ID: <BRUCE.92Apr16141045@merlin.think.com>
Source record: 290991

My HF rig is an IC-745, circa 1985, which I bought used about a year ago. I recently ran across a review of the rig, probably from an old QST. I learned something I didn't know: there's no NVM! The software is loaded at the factory and stored in SRAM powered by a battery. When the battery goes, so does your [not-so-]firmware: it must be sent back to the factory for the software reload. I just hope that when that happens, they'll still know how to download it!

Well, the best FD antenna I ever used was a 1000' roll of wire tossed down a steep slope from the top of a small mountain, secured to a tree at its lower end, and held up by a pole on the top end. It was certainly easily transportable and the installation was pretty easy (actually, tearing it down was harder (for me, anyway) due to the fact that the end of FD was a nice, warm day (as opposed to the sodden rainy mess the first two days were :-) and the pollen from the flowers was absolutely killing me (I didn't have hay fever until that day!)).

Of course, that antenna worked best due to the location, which isn't quite so easily transportable...

|>...
|>Gary KE4ZV

That sounds nice, but it's not clear it would help. Consider the TS440: it has an NEC 7800 processor in it. Having the source code for that is very unlikely to do you much good once the processor becomes unavailable. (And at least in that one, the EPROM is external...) The problem is that it's spaghetti code, lots of it, written for a machine that bears no resemblance to any other machine you've ever seen. Furthermore, it's hard to get manuals for them to tell you what the instructions mean, even though that processor family is still around.

If I gave you a 50 page source code file for the Lockheed SUE, and told you you're free to port it to whatever you like, how far would you get?

paul

1090. Amazing... (related to Heathkit)

I was surprised to see that the word "Heathkit" is in our standard
UNIX spelling checker dictionary. How 'bout that!!

I guess it will become what Websters calls an archaic word --
" ... once common use is found today only sporadically
or on special contexts ... "

...sigh..

I> You might consider finding out a little more about what's happening
I> today
I> before making assumptions like the one you made.

Well.. I will be the first to admit that I don't know the entire story when it comes to the 9600+ modem scene, but I do know a little bit. I will respond to your message as kind as I can considering your message was a little bile-ridden than it should have been. Try being NICE once in your life, why don't you.

Anyway, there is no one standard in the 9600+ mart. This is the main reason why USR sells a DUAL standard modem for around $800 or so. There are two standards currently. I don't remember how they work but they are something to do with v.32, v.32BIS, and v.42.

The main thing to look at hear is the modems that support their own kind. For instance, the CompuCom modems are very inexpensive for the 9600 buck, but for at least a couple of them, you can only call CompuCom modems. If you don't buy the DUAL STANDARD USR one, then you are only limiting yourself to being able to call certain modems.

Like I said, I know a little... but I could be confusing this with something else. I think it may work that modems with one standard can only go 9600 while the other standard can go to the ever-impressive 14.4k. I don't remember exactly.

And if I AM wrong in this, would you be so kind as to point me to the right source materials so I can read up and understand it a little more. I am not doubting your word (as you did mine), I would like to better understand the 9600+ world.

And anyway.. wasn't this thread about ICOM throwing out old parts?

I once owned a Gonset G-76. It was a neat AM/CW transceiver with 20/100 watt output. one 6DQ5 final and a couple of 6DQ6 modulators. I think it came out in late 50s. SSB killed it, but it was a very compact tube unit with a hot receiver section. I last used it on CW a couple ofyears ago, right before I sold it.

1094. Dayton Hamvention map coordinates wanted

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 15:41:30 UTC
From: dube@cpdvax.CSc.ti.COM
Message-ID: <199204161535.AA18884@tilde.csc.ti.com>
Source record: 290917

By the responses, it appears that there are some who aren't aware that there's some LORAN equipment available that you can run in an automobile. There's some aviation stuff that's small, light, and runs on 12 volts. It could easily be used in an automobile. Problem is, roads rarely run straight to Dayton. The LORAN distance readout wouldn't be accurate except as an "as the crow flies" distance. I don't think I'd plan my gasoline consumption with it's readings if I were using it in an automobile.

> 73 de Bob, N8MMR

That's probably the coordinates of downtown Dayton.

Dara Arena, Dayton Hamfest LORAN coordinates:

N 39 deg 49.45' W 84 deg 15.64'

I think I measured this location in the unpaved parking area north of
the flea market. My receiver was calibrated, so the location should
be accurate within 0.1'.

The ultimate disaster: Tornado sucks up the Dayton flea market,
survivors try to save the day by using ham radio.

1097. Yellow wire on DCD mod???

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 16:49:55 UTC
From: jan@archimedes.nwc.navy.MIL
Message-ID: <9204161648.AA23570@archimedes.nwc.navy.mil>
Source record: 290920

I've got the DCD state machine mods all put together for the DRSI type 2 cards, but nowhere in the instructions does it say where to connect the yellow wire! I got ahold of the instructions for connecting the mod to a DRSI type 1 board, but the boards are different. Does anyone have this mod running and can tell me where to attach this yellow wire (DCD back to the DRSI card)? It would be best if I could get the locations for both yellow wires, as I plan on having both ports on the card with the DCD mod...

Well, if you got the impression that I was flaming the hell out of you, then I
apologize. However, what you said (and the way you said it) implied that you
knew exactly what you were talking about, which, as you admit, is untrue.
>
> Anyway, there is no one standard in the 9600+ mart. This is the main

>something to do with v.32, v.32BIS, and v.42.

Depends on what reference you use. In the eyes of the international
community, there IS one, and _only_ one, standard in the 9600 (NOT 9600+) mart
- that which was adopted by the CCITT, which is v.32. Other standards, like
USR HST, Hayes Proprietary, etc. are pretty much dead technologies. The
reason why USR continues to make a dual standard modem is to keep themselves
out the the modulation hole they dug for themselves.
>
> The main thing to look at hear is the modems that support their own kind.
>For instance, the CompuCom modems are very inexpensive for the 9600 buck,
>but for at least a couple of them, you can only call CompuCom modems. If
>you don't buy the DUAL STANDARD USR one, then you are only limiting
>yourself to being able to call certain modems.

True. However, I would say at least 80-90 percent of 9600 baud modems now
support v.32, and it already has established itself as THE world standard.
Plus, the price that you quote for a v.32 modem ($500) was way off from what
it really is.

> And if I AM wrong in this, would you be so kind as to point me to the
>right source materials so I can read up and understand it a little more. I
>am not doubting your word (as you did mine), I would like to better

Understandable. It's just that this kind of misinformation could possible
confuse someone who's looking for such a modem, or is just curious.

>
> And anyway.. wasn't this thread about ICOM throwing out old parts?

>

It sure was. That why I said "FOLLOWUPS TO COMP.DCOM.MODEMS OR ALT.DEV.NULL"
at the end of my original post. Didn't you see it?

AMATEUR RADIO EXAMINATION OPPORTUNITIES

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Email may be sent to the ARRL/VEC at:

bjahnke%arrlhq.UUCP@uhasun.hartford.edu

or

MCI MAIL ID: 215-5052

You should include your postal address (the slow kind) in case we need to send you non-electronic material in answer to your question.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you will be attending the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, you may contact the coordinating VEC.

1101. QST Product Review List Part 1 of 3

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 17:21:38 UTC
From: ehare%arrlhq.UUCP@uhasun.hartford.edu
Message-ID: <571@arrlhq.UUCP>
Source record: 290924

QST Product Reviews 1/76 thru 4/92 QST - Part 1 of 3

I thought that this information would be of such universal appeal that
I am taking the liberty of doing a 3 part posting. I do apologize for
the length.

Back issues or reprints are available from ARRL Headquarters.

Contact: bdicosim%arrlhq.UUCP@uhasun.hartford.edu (Technical Dept. Secretary)
for reprints.

Contact: Publication Sales or email to 2155052@mcimail.com for reprints.

These fairly recent QSTs are probably available to you locally. Inquire of
your local ham club, local library, or with local amateurs on HF or your
local repeaters. You can probably get them faster and cheaper (free) that
way.

1102. Amateur Radio Examination FAQs

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 17:22:50 UTC
From: bjahnke%arrlhq.UUCP@uhasun.hartford.edu
Message-ID: <574@arrlhq.UUCP>
Source record: 290925

AMATEUR RADIO EXAMINATION OPPORTUNITIES

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Email may be sent to the ARRL/VEC at:

bjahnke%arrlhq.UUCP@uhasun.hartford.edu

or

MCI MAIL ID: 215-5052

You should include your postal address (the slow kind) in case we need to send you non-electronic material in answer to your question.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you will be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Email may be sent to the EAD at:

rwhite%arrlhq.UUCP@uhasun.hartford.edu

or

MCI MAIL ID: 215-5052

AFTER THE EXAM - HOW LONG WILL IT BE BEFORE MY LICENSE ARRIVES?

If you've recently passed your initial examination for an Amateur Radio license, or if you've just upgraded, please accept our warmest congratulations! Now that you've passed the test, receiving your license in the mail is the next step.

Since the FCCs current license processing time is at about seven weeks, and since there can be additional time required within the volunteer examiner system of two weeks or so allowing your VE Team and VEC (if for Technician class or higher) time to process your application, your license might not arrive for up to eight to ten weeks.
To keep your wait for that new license or upgrade as short as possible, we are taking the following steps to give you the fastest possible service.
We have begun providing our VE Teams with express OVERNIGHT mailers for the return of applications from ARRL/VEC exam sessions to us at the VEC--and we at the VEC have begun sending our daily packages to the FCCs Licensing Facility via an express OVERNIGHT service.
We are also encouraging our VEs, and imposing the same emphasis upon ourselves, to process examination packages as quickly as possible to expedite your license.
Having implemented the above procedures, the ARRL/VEC wants your wait for your new license to be as short as possible.
If you have any other suggestions about the program, or services we provide, please feel free to contact us.

THINGS TO BRING TO THE EXAMINATION

Be prepared to bring the following items with you to VEC examinations: Your original current FCC-issued Amateur Radio license (and a copy of it)--if you are licensed; Any original Written or Code Element credit documents (CSCEs) which are currently valid; Two forms of identification (e.g., a photo-ID or drivers license and another item indicating your current name and address); A calculator (if necessary); A pen and two pencils; and, the applicable examination test fee.

TECHNICIAN CLASS GRANDFATHER CREDIT

If you hold a Technician class license which was issued prior to 3/21/87, you are not required to take the Element 3B (General class written) examination if you can provide a copy of your FCC-license dated before that date. If your licensed has since been renewed, and if you don't have a copy of the pre-3/21/87 license, you must seek a verification letter from the FCC. To do so, write to FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245 and request a Form 1010-B Verification Letter verifying that you were licensed as a Technician class prior to 3/21/87. After you receive that form from the FCC, bring it to the test session with you in order to claim your deserved credit.

LOST LICENSES

If you have lost your license, be aware that VECs are not permitted to submit any upgrades to the FCC without a copy of your current license attached to the 610 form. In order to expedite your upgrade, you must write the FCC and request a replacement license. Since that can take several weeks to arrive, we recommend that you also request a Form 1010-B verification letter from the FCC which will arrive in a couple of weeks--and is legally binding license document. You may use that form as a license until your Form-660 license arrives. The original and a copy of Form 1010-B must be brought to the test session verifying that you are currently licensed--the copy of which will be attached to your upgrade application (in lieu of an actual Form-660 license copy). To request the Form 1010-B Verification Letter, write to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that you are requesting that a replacement license be issued to you--also be sure to request that they send you a Form 1010-B Verification Letter verifying that you are licensed.

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired, VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code

examination requirements. For information and applicable forms, send an SASE to the ARRL/VEC, 225 Main St, Newington CT 06111; and request our Handicapped Information Package.

For further information on examinations or procedures, you may contact any of the following coordinating VECs.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541

Without getting into the why's of the refusal, I have NEVER heard of a case where any organization, or publication (newspaper, etc.) has been forced to accept any advertising it chooses not to carry. Newspapers do it all the time when they refuse various personal ads, certain political ads, etc.

ARRL is a "private" club as near as I can tell, and I can't see how the Lambda folks could ever prevail.

Just my comments on the subject, IF there is indeed some type of complain filed against ARRL.

Standard Disclaimer- Any opinions, etc. are mine and NOT my employer's.

I'd always been told that you should not freeze batteries because the
expansion of the electrolyte will break internal seals, if not crack the
battery case itself. I always refrigerate my unused batteries, but
is it really safe to freeze them?

1106. CBS, California, and FCC call letters

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 18:31:39 UTC
From: wales@valeria.cs.ucla.edu
Message-ID: <1992Apr16.183139.27920@cs.ucla.edu>
Source record: 290979
Cross-posted to: rec.radio.amateur.misc,alt.folklore.urban

There's an interesting situation here in California with the major CBS radio and TV stations.

Up until a few years ago, the following CBS stations used the following call letters:

AM FM TV

San Francisco KCBS (740) (?) KPIX (ch. 5)

Los Angeles KNX (1070) KNX-FM (93.1) KNXT (ch. 2)

The San Francisco stations still use the above calls, to the best of my knowledge.

Here in L.A., though, the TV station changed its call a few years ago and became KCBS-TV. And after a couple of changes in format (and, for all I know, possibly ownership), the FM station has been reborn with a call of KCBS-FM (though most of the time they identify themselves on the air via the nickname "CBS-FM").

So now we have a situation where KCBS is in one city, while KCBS-FM and KCBS-TV are in another. Are there any other arrangements like this in the US?

Incidentally, the NBC and ABC TV stations in Los Angeles are KNBC (no radio stations sharing the call, as far as I'm aware) and KABC-TV (there is an AM station called KABC as well).

]the inards of the packs.
]What's the best way to store the batteries so that they'll at least be
]rechargeable when I need the rig?
There isn't really a good way. If you use it infrequently, do as I do and use alkaline cells. They have a longer shelf life, and don't cost as much as nicads if you don't use em very often.

>has been forced to accept any advertising it chooses not to carry.
>Newspapers do it all the time when they refuse various personal ads,
>certain political ads, etc.

The "whys" of the refusal are the central issue. I don't think it's appropriate for the ARRL to refuse to carry LARC's ads if that refusal is based on anti-gay sentiment. If they refuse to cary ads from other radio clubs on a general basis, then this argument is moot. I'd like to know just why LARC was refused. In any case, I'll be talking to my division director about it; that's the best way to get heard on any particular issue relating to the League. I'd recommend that others who have an opinion contact their director, too - and not just on this issue, but any they have an opinion about. The directors can't follow the wishes of the members if they don't know them.

>ARRL is a "private" club as near as I can tell, and I can't see how
>the Lambda folks could ever prevail.

Legally? Good question, especially if there's a law against discrimination based on sexual preference in Connecticut and that was the reason for the refusal. I suspect that it'd take a court to iron it out. Personally, I'd rather see the League simply accept the ad (unless if falls under a broader policy).

This is very true for computer equipment. It is much less true for RF
equipment. A 20-year-old Drake L4B kilowatt amplifier is still a fine piece
of equipment that most hams would be proud to use in their ham shack.
8 inch floppy disc drives were not even available 20 years ago, and are
now already obsolete.

1112. Ah.. the welcome voice of HAM

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 19:22:18 UTC
From: Mike_Whalen@agwbbs.new-orleans.LA.US
Message-ID: <Mike_Whalen.0c16@agwbbs.new-orleans.LA.US>
Source record: 290985

I recieved this message in my mailbox earlier today. I am clearly not a person who understands, fully, the way that the 9600+ market works.

To the best of my knowledge, although my "friend" here has me pinned as someone who listens to "weenies", if you have a modem that is v.32 specifically, you can't call v.32bis.. and vice versa. Hey.. this all comes from operators mouths and heresay so it could be wrong. At least I CAN admit that to everyone.

Now, my beef with this message which you are about to read, is this person is a HAM and he really insulted me. Told me to shut up.

What I want to know is.. are a lot of hams like this? I mean no disrespect at ALL! But so far I have been told that I shouldn't have said anything and that I am ignorant and should shut up.

{begin message}

[From] Doug Faunt N6tqs XXX-XXX-XXX
[To] Mike Whalen
[Date] Thu 16 Apr 92 11:59
[Subject] (now) standard modems

Excuse me, but you keep talking about standards, about which you are remarkably ignorant.

There is a modem standard for greater than 9600 bps transmission. It's called V.32bis. There are also protocols for greater than 9600 transmission, that are not standard, but manufacturers would like you to believe are. One of these is the USR HST. It's NOT a standard, and if you think it is, you're gullible and ignorant.

BTW, V.42 has NOTHING to do with transmission speed, despite what the marketing weenies seem to have you believing.

There is a proposed standard, called V.FAST, that is still a proprietary protocol, but may become a standard, that calls for 24k to 28k transmission speeds.

You've been listening to too many marketing types, which is fine if you're going to keep your ignorance to yourself, but when you state their assertions as facts, you're opening yourself up for the kind of derision that you so rightly deserve.

You're much better off keeping you mouth shut, and be thought ignorant, then to open it and prove you are.

{end of message}

WHOA! What a warm welcome from the HAM community. Take this to heart, guy! It's much easier to sit there in the comfort of your own home or office and type a hate-message to a guy than tell him to his face.

I don't get this. I am sorry I am misinformed on this subject. I take back everything that I said about the bloody topic. This message was clearly uncalled for and I wish I wouldn't have recieved it.

Look, guys.. I know that all of you aren't like this. I have been talking with some really nice people in Mail about different subjects... on the other hand.. you had one person last week who was complaining that new people didn't know "dung" about HAM and that they were idiots and shouldn't be in the hobby.

Now, you have this guy who is acting as "fact police" running around mail telling people they are IGNORANT and telling them to SHUT UP!?!?

Pardon me, guys.. but what the ^$%^ is this?! Everyone here is so concerned about people being welcomed into HAM.. but then stuff like this occurs..

There's really nothing more to say on this. I haven't really talked to enough peopl to say that I am getting more negative than good.. I am trying not to believe that this is a reflection of a lot of people.

If enough of you have the attitude of that guy up there.. you can be assured that not many are going to want to join the hobby.

Mike..

>"throwaway" concept).
>
>steve - W3GRG
>mosier@uncg.bitnet
>mosier@steffi.uncg.edu

The concept especially applies. State-of-the-art advances very often obsolete
everything prior. Cost doesn't affect that. If one chooses to pay
big bucks for the latest gizmo, in the midst of a technology explosion, then
one must reasonably expect that next week, month or year it will have been
left in the dust, and therefore perhaps of little value. That's what I meant
when I said it's the price we pay. I have a TS-820. It doesn't have all the
new-fangled computer-controlled stuff, dozens of memories, etc. It just does
a good job of transmitting and receiving. I don't need pre-programmed freqs,
nor do I mind the occasional final tuning when I change freqs. But that's
my choice to forego all the expensive frills and still get the thrills.

For many products, the effect of technology advances has been to drive
prices down; to the point where an equivalent product today costs one
twentieth of what it did 15 or 20 years ago. There are no parts available
for the early products, because today's entire product costs less to build
than some replacement parts would.

For an expensive piece of equipment, though, given that the owner would rather
pay, say, 20 percent of it's replacement cost to get it repaired, it looks
like a good opportunity for someone to make some bucks doing "aftermarket"
CPUs, etc. Could you make a living at it? Depends on what the failure
rates are. I have a feeling that for, say, one failure out of a thousand,
it wouldn't pay for either the manufacturer or the aftermarket vendor to try
to service the stuff. "You pays yo money and you takes yo chances", I've
heard said; and I guess it still applies.

It reminds me of my Sony TV. The picture tube failed. If I replace it myself, it'll cost about $350 just for the tube. Am I gonna do it? No, even though it originally cost $1200, the 10-year-old set isn't worth it; especially when I can get a comparable one new for $350. At my age (geezer zone) I never thought I'd consider such an item a "throw-away", yet there it was, in black and white (and magenta :-)). I lay it to the fact that technology advances and market pressures pushed the price down.

I used to store fresh cells in the freezer until I discovered
a D size alkaline that had burst. The seals had busted and the
plastic envelope broken off. The plastic envelope holds the anode
terminal to the battery. So now I do not freeze any cells.
May be that Ni Cads are different.

>a SSB rig running about 25 to 50 watts. I am not sure that this version was
>for any other band than 2 meters.

The "Gooney Boxes" were around before the BHLB. They were a box with
three chassis in it: receiver, transmitter and power supply. The Gonset
III had a different shape than the I and II but All they did was change
where the guts fit in the box.

There was also a linear for them. It had an 826 in it. There was a
window so you could see the tube. That way you could tune by the color of
the plate of the tube. Really!

My introduction to 2mtr FM was working on a net (high school football game
coverage) on 146.70. There were some people talking on the "same
frequency" and I asked them to QSY. They explained that they were
on 147.76 FM (yes, good old '76 in LA in the '60s) and they couldn't QSY.
A couple of years later I had a good old 40V on 146.76.

Why, isn' it curious? *I* happen to be a member of this lil' private
club. Fancy that! and *I* want to accept advertisements from LARC.

Too bad the ARRL didn't ask me about my personal and social life before
they pestered me to join up... Funny though, they didn't want me for
a long time just because I didn't want to learn their silly ol' Morris code.

Well, the times they is a changing. I fully intend to rejoin the ARRL,
heck, I'll even become a LIFE member.... Yeah, that's it. I'll do it
next payday. Love the magazine, and the advertisements too! Fun and
entertaining new radio clubs to join and all that.

I'll tell you another thing. The ARRL plays along with another lil'
private club I'm a member of.. The United States of America. I don't
think I want my club allowing the ARRL to discriminate against people!
Yeah, perhaps a club that is discriminating cannot be trusted or allowed
to participate in the VEC program, or send representatives to that other
lil' club I'm a member of... The IARU, Yeah.. Thts' the ticket...

The dinosaurs died like this, I think...

We're here, We're Queer, Bleeding well get used to it OM's....

Yes, but ARRL membership is required for certain ARES positions, such
as city, district, and section EC. I think a case could be brought
that the ARRL, because of the "closed shop" policy, must follow the
same guidelines as a non-private club.

Personally, I'd like to hear some "meat" arguments. What happened and why?

1123. ICOM IC-2AT HELP

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-16 23:49:11 UTC
From: sking@wattres.San-Jose.CA.US
Message-ID: <1992Apr16.234911.3452@wattres.San-Jose.CA.US>
Source record: 290997

I have a question about battery packs for the IC-2AT. Included in the documentation w/ the HT is a list of options. Both on this sheet an in a recent ICOM catalog, the highest power battery that can be used is the BP-5 (10.8 V), but not the BP-7 (13.8 V). I have a 12 V battery (measured 12 V) and would like to know that since 12 V is not significantly more than 10.8 V, if it can be used on my IC-2AT without causing damage to the insides. Is there anyone on the net that has used, or uses, a 12 V (as opposed to 13.8 V) battery on their HT? Please email me your comments. Thanks in advance.

1124. Kenwood 221 data protocol ??

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-17 01:27:00 UTC
From: pomplun@amazon.llnl.gov
Message-ID: <1992Apr16.172700.1@amazon.llnl.gov>
Source record: 290998

I have a Kenwood 221 2m transceiver, and I used to have the RC-10 remote "handset" controller. They were an impressive pair, capabiity-wise. I got rid of the RC-10, but would like to interface the '221 to my PC. Almost any control on the '221 was operable via datacomm with the RC-10, but need details on the protocol. I already know the pinouts. Any of the ham station remote control manufacturers I have talked to say they have not done the '221 (series). Has anyone tried this yet ??

> one must reasonably expect that next week, month or year it will have been
> left in the dust, and therefore perhaps of little value. That's what I meant
> when I said it's the price we pay. I have a TS-820. It doesn't have all the

Can't argue with that. I know someone who has successively bought 3 state-
of-the-art HT's during the past year. All for the latest gizmo, I guess.
And I'll have to admit, those things light up in ways that my IC-2AT won't.
As long as enough hams behave that way, manufacturers will be able to get by
with less-than-a-decade obsolescense, even with $multi-K radios. If we bought
radios and kept them for 15-20 years and collectively raised hell when they
couldn't be fixed, then manufacturers would behave differently. The problem
right now is that someone wants us to collectively raise hell over the
unavailable 720 CPU chip, when in fact all of us have already thrown our 720's
away to buy 721's (or 720A's, or 720 Mark II's, or some such).

Well, nobody ever said I was rational. I still think we should keep radios a
long time, and raise hell when they can't be fixed. (BTW, I ordered a Ten-Tec
partly for that reason, although at the time I probably couldn't have explained
it that way. Sure hope the CPU works when it arrives. 8-))

1126. Spectrum Allocation Table

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-17 01:49:11 UTC
From: day@william.vancouver.wsu.edu
Message-ID: <1992Apr17.014911.21098@clark.edu>
Source record: 291000
Cross-posted to: sci.electronics,rec.radio.amateur.misc

Does anyone have a table of what frequency bands are assigned to various radio services? I'm looking for data like 144-148 MHz is the 2-meter amateur band, x-y Mhz is cellular, a-b Mhz is such and such service, etc.. I'm not particularly concerned with the internal structure for these services other than something like CB is x number of AM channels y KHz wide, but I don't need the entire band plan for something like the 2-meter ham band.

Any information will be appericiated. Please e-mail since I won't be able to read the news again until Monday or Tuesday and I don't have a treaded news reader :-(:-(

Thank You

>really have not found a group that cries so much. Its a
>wonder that anybody puts up with us.

Perhaps if more hams complained there would be less BS to
put up with. Instead, hams try to accomodate the FCC, and
then complain when they get screwed. Hams try to help the
local gov'ts, and then complain when the local police channels
are encrypted, or when the hams no longer get to play cops.

I'm not a ham, and am the first to admit that I could be
completely wrong, but geez, I've never seen such an accomodating,
and screwed :-), hobby group in my life.

Given all the recent ICOM bashing, I figured I'd ask this august
body: What other manufacturers make wideband UHF/VHF receivers
comparable to the ICOM R7000/R7100? I've checked my local shops,
plus read the magazines, and the only thing I've found is, gack,
AOR 3000's.

BTW, has anyone purchased an R7100 yet?

Got a quick question for all of you...

Does anyone out there have a schematic for a simple echo box? I recently was handed the job of "Chief Engineer" at our dorm radio station, and one of the neat-o things that I promised to look into was building a box that would give the station mike an echo effect. If anyone has a design or pointers to one, it would save re-inventing the wheel.

Thanks...

>
Wonderful rhetoric, but the United States of America isn't a private club. If you think about it, perhaps you'd agree that our Nation gives a group like the ARRL the right to disagree with a certain 'lifestyle,' much like the ARRL would probably not allow advertisements for the KKK Radio Klub to be published. If you don't like the ARRL's policy, don't rejoin, or do something constructive to attempt to change that policy.

I really don't care a whit if 'the arrl' is or is not interested in the LARC.
What I am interested in is that they do not discriminate. It's simple. Those
of you (like yourself, apparently) who are bigots and hate mongers will have
to move forward and open your minds. You cannot go about dictating who may
or may not participate in society.

>>Too bad the ARRL didn't ask me about my personal and social life before

>something constructive to attempt to change that policy.

I've indicated that I *will* rejoin, Brother Member. Further I've indicated
That I *will* seek constructive methods to battle indecency and prejudice
within MY ARRL.

No one is asking you to agree with anyones lifestyle. I hardly can agree with
yours (which, apparently, is to stick your head in the sand and kick at things
you cannot see.)

As for the 'rights' OUR Nation gives to the ARRL, those 'rights' are based on
and dependent on the rights (inalienable, imagine that!) of our citizens.
Among those are the Rights to Life, Liberty and the Pursuit of Happiness.
Remember those? Well, if the ARRL is systematicaly discriminating against
Lesbian, Bisexual, and Gay members of our society, then they can hardly be
given the priveledge of administering resources shared by all citizens. These
include Amateur Radio examinations, special lobbying status, etc...

What *you* might want to do is create the Bigoted and Small Minded Radio League.

As for the KKK, where go you get off comparing the two? Gay, Bisexual and
Lesbian individuals do not go about killing people, systematicaly attempting
to deny people rights, to terrorize and harm them, nor to spread hatred and
distrust. Get a clue loser...

I suppose you're the type who's happy that they aint a lot o' them colored
folks in the hobby too, eh? I hope that'll change as well.

>>The dinosaurs died like this, I think...
>>
>>We're here, We're Queer, Bleeding well get used to it OM's....

It bears repeating. Do NOT tread on me!

I must admit I have mixed feelings about this thread. I don't want to make
my, or anyones sexuality an issue here. What I must do is address the issue
of the ARRL and discrimination. That is the reason for this thread. I am a
member of the ARRL, I am a Citizen of the United Stated of America, and I
am a member of the Gay, Bisexual and Lesbian community. Thus, it is relevant
and paramount that I make sure to have my voice heard. Surely most of you
have grown up enough to get past the 'Ewwwww, Cooties!' stage of life and
can clearly see that who and how people love is not a matter for derision.
Just as your own sexual and romantic expression is vital, so is anyone
elses. Follow ups on specifics of the sexuality issue, if desired are
best posted to Soc.motss, Soc.bi, or other notable groups. Followups on the
ARRL issue are, obviously appropriate to this group.

Peace... Share the world, love your brothers and sisters.

On behalf of most reasonable Hams, let me appologize for Doug. He is not
typical. Though I've only been on the net for a few months, I've been an
active ham for more than thirty years, and I believe that I can express an
informed opinion on this point.

Most hams will not hesitate to correct any statement which they believe to
be incorrect, but will do so in a manner intended to help you to learn, not
to belittle you.

One of your statements certainly appears to be correct, folks who are usually resonable and polite when fact-to-face, or on the telephone can and do become rather abusive and inconsiderate when sendigne e-mail, of posting to the net.

Please, stick around and become a ham. We have many nice friendly young folks, quite a few decent "old foggies", and only a few jerks.

73,

Sarge

>how long the CPU will last on a $2,500 radio.

Ten-Tec is a model example of what's happening in the electronics industry. They are a small company owned and run by hams for hams. Historically their radios have been excellent RF performers while lacking some of the polish and sophisticated user interfaces of their Japanese competition. They have avoided using microprocessors and synthesizers and concentrated on good analog engineering.

Unfortunately, the market has decided that sizzle is more important than steak. Ten-Tec's dealer network was bailing out on them, so they have gone to direct sales. *And* their new rigs use microprocessors and synthesizers with custom components. Same with the new Drake R8. This is good equipment, but there's no way that they are going to be able to offer the long term support for these units that they could with the discrete component rigs. The parts manufacturers determine how long a custom chip is available, and Ten-Tec, or even Icom, doesn't have the market clout to dictate to the IC houses.

Sony has the clout, but try getting parts for a five year old Sony tape deck. GE has the clout, but try to pry parts out of GE for a one year old toaster oven. The big companies *can* afford to ignore the complaints of the rare individuals who hang onto consumer equipment for excessive lengths of time, and the little companies that cater to the ham market *can't* afford to support those people.

You'd better plan on buying new equipment on a five year cycle, or plan on becoming an electronic junkman to acquire the parts to keep them running. That *is* the genesis of the hamfest fleamarket.

From: bourque@sceng.UB.COM
Message-ID: <9204170655.A20536@sceng.ub.com>
Source record: 291014

I agree that this thread has gone on long enough. I am sure the points made can and will be applied to others as time goes on. Here's a new twist for you to ponder. I can understand the problem of getting parts for a 10 years old radio. But how about one that is currently in production? Personally I own three Icoms of various vintage. A 22S, 271A and a 901A. My problem lies with the 901A. Case history. Last fall I moved the 901A into a new truck. No problems during the course of the winter. Now that the sun is at a higher angle I have discovered that I cannot read the display with the control head mounted in the location I have chosen. I began looking for a new place to mount the control head that would solve my problem without introducing others (controls out of reach, etc....). Possible solution, mount the control head to the roof interior, maybe. I don't like drilling holes if I don't have to. Solution, Icom has listed an optional mounting bracket to attach the control head to the sun visor. Sounds good to me. Sounded like I could solve all my problems. No Holes to drill, easy to remove for security reasons, gets the control head in better lighting conditions.... Now for the complaint. I stopped in to my local HRO last night to buy the bracket, an MB-21. I truly didn't expect them to have one in stock but I was willing to order one and wait for few days for it to arrive. As expected, none in stock. What I didn't expect was the answer. NONE AVAILABLE. I couldn't even place an order. Icom, what gives? A current production radio with an accessory not available. I might expect that answer if the radio was just released but come on. This radio has been out for a couple of years now. Now that I have aired my complaint about Icom I feel like I belong now. As one other posting said. We are a bunch of whiners, it feels good to vent this frustration somewhere. 73 de Dave WB1FLD

>and WE WERE PART OF THE COMPANY!!!!

I'll say this for Icom, their field service organization is first rate.
If they can get the parts, they do quick, courteous, and competent
repair work. When my beloved IC211 was terminated by a direct lightning
hit, they tried very hard to repair it, but couldn't get the custom
chips. They very kindly UPSed the carcass back to me, *NO CHARGE*.
That's the mark of a class act. I'll be shopping for 211 guts at
Dayton.

>Wake up, American companies!!!! This is your chance that you can show
>that we can do something a lot better than the short guys across the
>pond. A lot of customers base their next buy
>(whether it be cars,
>microwave comm systems, SATCOM systems, computers, etc.,) on what
>kind of support they got from their last purchase.

This is very true. Unfortunately, it was US companies falling down on
the job of consumer satisfaction in the first place that lost them their
market share. The arrogance of GM and Ford zone offices is legendary,
we won't even mention their ripoff dealers. And GE, don't get me started
on GE. They won't even sell you parts for something they *still* make!
I don't even want GE *light bulbs* in my house. The class acts of American
companies are exemplified by Tektronix and HP. I've got a HP45 that I bought
in 1966 that HP *still* does *warrantee* service on. They replaced the ENTER
key on mine last year, *NO CHARGE*. Now that's class. I just bought a HP95
instead of a Wizard *because* of the extraordinary service HP has offered
me in the past. When Tektronix finally decided to quit supporting the
453A last year, they shipped all remaining stocks of parts to the *retired*
engineer who designed the scope and refer customers to him. That earns
him a little extra money in retirement, and keeps us 453 owners happy.
That's class. My company just bought several new Tek scopes partially
because they are excellent scopes, and partially because of the class
way Tektronix looks after their old friends.

A reminder to all that the American Radio Relay League
continues to make available to Amateur Radio Operators and
non-amateurs alike a wide variety of free materials and
services. Of particular interest to the not-yet-licensed
individual would be the ARRL Prospective Ham Package. In
the PHP, one would find:
.-
1. Printouts of Volunteer Examination session opportunities
in his/her area.
.-
2. Listings of Amateur Radio clubs in his location.
.-
3. Helpful promotional material about the Amateur Radio
Service.
.-
The already-licensed individual might well be interested in
another free ARRL publication, the ARRL Public Service
Communications Manual. The PSCM represents the "bible" of
public service communications, and clearly/concisely points
out how the ARRL National Traffic System and the ARRL
Amateur Radio Emergency Service function as a cohesive unit
to provide the maximum support to the public both in times
of disaster as well as "normal" times.
.-
To obtain either of these free ARRL services, please provide
me with:
.-
A. Your name
B. Your mailing address
C. A Specific request for either of the two services above.
.-
Best 73!
.-

I missed out on the earlier post, but here is what my CCITT reference sheet shows for v.32 and v.42:

v.32: 9600 bps full-duplex 2-wire modem standardized for use in the general switched telephone network with 48000 [sic] bps fall back.
(I think they really mean 4800 bps fall back - ed)

v.42: Covers error-checking protocols for use on standard dial-up lines. This will enable error-free data transfer at speeds up to 19200 bps without the need for leased lines.

These two paragraphs are from a chart I copied from (I think) the back of the Black Box catalog. It appears to be a reprint of the CCITT standards.

I am sorry that you had a bad initial experience, but hope the info above is useful to you.

1145. A Packet/Amtor hybrid called Pactor

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-17 17:53:23 UTC
From: hughb@netcom.com
Message-ID: <v#2j!qc.hughb@netcom.com>
Source record: 290936
Cross-posted to: rec.radio.amateur.packet,rec.radio.amateur.misc

I was talking to a ham acquaintance of mine, VE3FZK (Andy), the other day, and he mentioned that his radio experimenter's club had a talk on Packtor (sp?) the other evening. He described it as a hybrid between Amtor and Packet. Apparently, a group in Germany developed it and even sells a box that does Packtor, baudot, amtor, and rtty, but NOT Packet.

The Packtor mode gives pretty good throughput on the hf bands, and he was interested in getting some folks working with it. One of the members of his club was working on translation of some german language articles on the subject. His goal is to make some boxes here for just the Packtor mode, since we should be able to come up with the talent and materials here in Silicon valley. (Please, no flames.)

Are there any other net readers working on Packtor that would like to coordinate with a group out here in the San Francisco area? Let me know. If anyone has information on this mode of operation, maybe you have some articles, or have a working system, please drop us a line.

OR, buy some good Collins gear. Sometimes the parts are expensive, but you can always find them. Also, you can fix them yourself. There seems to be an endless supply of used equipment coming out from the defense dept. There is a support net on Sundays, and a lot of experts available. K9ALD

1147. Field-expedient broad-band HF antenna (long)

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-17 18:13:02 UTC
From: mac@cis.ksu.edu
Message-ID: <mac.703534412@depot.cis.ksu.edu.cis.ksu.edu>
Source record: 291020

The March, 1992, issue of RF DESIGN magazine included an article "A Field Expedient Broad Band HF Antenna" (pages 135-137) by Bernard Feigenbaum, U.S. Army CECOM (908) 544-4532. Although he wrote about "the varied and demanding requirements peculiar to expeditions and military tactical communications" instead of Field Day, his solution for the military should work for Field Day, too!

He began by mentioning (and then discarding from further consideration) the most obvious field-expedient antennas: dipoles, sloping vees, and long-wire beverage antennas; and then he described his solution. Copied without permission, here are portions of the article:

"The zig-zag sky-wave antenna has similar impedance and radiation pattern characteristics as the log periodic; but does not have the super gain quality because it is much smaller. However, it has standard gain similar to a standard half wave antenna. Its advantage is that it occupies less real estate than any of the other field expedient antennas. It can be truly said that this is a field expedient, tactical, HF log periodic antenna and the principle behind its operation is the subject of a recent patent.

".... It combines transportability, electrical performance, easy assembly and low cost. The new antenna makes log periodic characteristics available at a fraction of the cost of a full size LP antenna. ....

"The foregoing and other objectives are achieved in a preferred embodiment, both patented and copyrighted, wherein ten inter-connected, vertical, zig-zag, antenna sections are of a pre-determined increasing height. The antenna is terminated by an appropriate resistance so as to maintain the characteristic impedance over the entire frequency range of interest. A counter-poise is utilized to balance the antenna system. Power is coupled to the shortest zig-zag section via a 9:1 broad band impedance matching transformer. The currents that are induced on the antenna cause power to radiate at low elevation angles.

"It is a peculiar feature in that, unlike the conventional log periodic antenna, the miniature HF antenna is a non-resonant log periodic directional antenna which achieves a single main beam by virtue of satisfying the Hanson-Woodyard condition; one of the few instances where it is practical to obtain more directivity from an array with reduced inter-element spacing.

"The miniature log periodic antenna has constant impedance and radiation characteristics similar to a full size log periodic

antenna....

"The miniature antenna is also superior for transport. ....
can be erected by one man in 45 minutes in fair weather....

"U.S. patent no. 4,733,243 was issued for this antenna on March
22, 1988. The antenna is available by means of Technology
Transfer agreements between the U.S. Army and industry."

The small and not-to-scale sketch which accompanied the article looked
something like this (within the limitations of an ASCII drawing):
A sloping rope is used to suspend the wire "mountaintops" /\
at the ever-increasing heights shown and the /\ /||\
bottoms of the "valleys". /\ / \ / || \
/\ / \ / \ / || \
/\ / \ / \ / \ / || \
/\ / \ / \ / \ / \ / || \
/\ / \ / \ / \ / \ / \ / || \
/\/ \/ \/ \/ \/ \/ \/ || \
| || \
| || 400 | ohm
grounded mast termination
to ground

The "antenna" was raised one meter above the ground, but I can't tell
if this was the whole antenna or just one end. Three counterpoises
were shown.

Since this antenna has been patented AND copyrighted, I'm hesitant to
copy any more details to a public net. The patent should be available
from the U.S. Government for the usual fee. I'd love to correspond
via "private" email with someone(s) who would repeat the NEC (?)
simulations hinted at in the article.

1148. Re: How to store NiCd batteries?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-17 18:31:19 UTC
From: kstuart@oasys.dt.navy.mil
Message-ID: <18334@oasys.dt.navy.mil>
Source record: 291021

Mike, your concerns about the bursting of frozen cells are well founded. Cells such as alkalines, LeClanche and lead acid can have their electrolyte turn to water as the cell discharges. This raises the freezing point of the electrolyte and can cause cell bursting.

However, the potassium hydroxide in the NiCad does not change with the state of charge on the cell. Therefore, the NiCad is more immune than the other types to cold temperatures. I was very specific to mention KOH in my post... BUT - by all means, go ahead and refrigerate the cells, rather than put them in the freezer. The difference inlcharge retention will be minimal, anyway.

By the way, some years ago an Antarctic expedition came across an old campsite set up by another group about 7 or 8 years previously. They found a number of alkaline cells buried in the ice, removed them, and took them back to base. All cells were in excellent shape and still had about 90 percent of their capacity remaining.

1149. SB-1000 owners...

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-17 18:38:30 UTC
From: jeff@markets.amix.com
Message-ID: <1992Apr17.183830.22638@markets.amix.com>
Source record: 291022

I understand the SB1000 is an Ameritron that was sold in kit form.
Does anyone have any comments on its reliability and performance?

I'm thinking about getting a used SB1000, but am paranoid that, like
some other heathkit ham gear (e.g. SB104), it has problems. Also,
buying used gear that was built by the first owner makes me even
more paranoid, but linears are relatively simpler than, say, tranceivers.

Oh, one more thing: can the SB1000 be run in QSK mode? (I'd like to
do amtor with it.) Or can it be modified to run in QSK mode? I know
that the Ameritrons have a QSK add on option; I thought heath sold one
too.

Thanks.

This is a clear a summary of the situation as I've seen and it accurately
describes our options. Essentially we get to vote with our wallets. If
we like the support policy of ICOM/Kenwood/etc, then we buy their products.
If we don't like their policy or want radios that are serviceable over
the long haul, then don't buy their products. There are, afterall, plenty
of radios "out there" that do contain user serviceable parts inside.

All of mine do and I like it that way.

>so ago in a number of newsgroups, in regard to cell phones.

And the result of that beating to death was still a lack of evidence
that the FAA's interpretation is any different than what the FAR says.
The FAR does NOT say that the PIC does NOT have the authority. The FAR
places the responsibility on the operator, but does NOT specify who has
the authority to make the decision within the operator's organization.

I.e., it is up to the OPERATOR to decide who makes the decision, but the
operator is responsible for whatever that decision is. That is what the
FAR says. And in the case when there is no operator acting under an
operating certificate, the PIC is specified as having the
responsibility.

> FAR 91.21 reads in part

[out of date regulation deleted]

>note: My copy is out of date, so there might have been some changes.

There have been, as you were told during the last discussion of this
topic, and a correct version was supplied. Please stop posting out of
date regulations as support for your claim that the FAR's prohibit the
PIC from making this decision.

Ha! Just try buying the controlhead!?!?! If some thief stole the
controlhead but didn't steal the radio in the trunk. Try getting
a new control head for that radio. I had this happen to a friend
of mine, the only thing that saved him was that the local HR store
had a control head from a very damaged radio laying around.

So guess you better never forget to take the control head out of
the car. At least stick it in the trunk where it can't be seen.

1155. re: LARC vs. ARRL

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-19 10:21:31 UTC
From: faunt@cisco.com
Message-ID: <9204200021.AA24667@dirt.cisco.com>
Source record: 291027

I talked to the East Bay SM, the San Francisco SM, and the secretary of the Golden Gate Chapter of LARC, and have a lot of information.

First, the ARRL board, at their meeting on 28 March, reportedly removed the restriction that was affecting the publishing LARC's of advertisment. This was in response to efforts of the SF SM, and the Pacific Division Director, at GG LARC's request.

The GG Chapter of LARC is apparently pro-ARRL in spite of the problem, and is, I'm told, an ARRL-affiliated club.

My SM told me that no-one had ever asked him to do anything, although many GG LARC members are in the East Bay Section. He personally thought the policy was wrong, and was willing to work against it.

Apparently the issue has blown over. It shouldn't have even arisen, but there's still a lot of homophobia out there that is well entrenched.

RACESBUL.218 DATE: April 20, 1992
CATEGORY: MGT
SUBJECT: The Radio Officer as a Manager

Question: What skills are the most important for a Radio Officer?
Reply: The Radio Officer position is one of management skills more
than that of operations or length or class of license. Although it is
very helpful, a ham license is not required for a Radio Officer,
except for RACES. Other than novice, the class of license is not
important, either.
The Radio Officer, whether managing a RACES program or a broad
-based auxiliary communications program, is a manager of people to
meet the goals of the program. Program goals are set by the Radio
Officer's appointing authority, usually in cooperation with the Radio
Officer's recommendations. Such responsibilities clearly distinguish
the Radio Officer from the technical, maintenance, engineering and
operating activities. Although a Radio Officer may possess one or
more of these skills, they are not required to be a good program
manager, although they are quite helpful from a knowledge basis.
Today, due to budget and time constraints, there is increasing
interest in the "auxiliary communications (or radio) service"
approach to include all communications volunteers that serve a
particular government. Such a combination in a general service,
under a qualified Radio Officer, allows volunteers with diverse
skills and interests to belong and serve. But, this further
emphasizes the need for management skills rather than operations
on the part of the Radio Officer. The appointing authority wants one
point of contact with all of the communication volunteers for the
day-to-day programs, which is a sound and basic management
principle. ---Stan Harter, KH6GBX

>there is often a direct replacement; if not, you can kludge
>something up with an electrically-similar type. If a weird custom
>microprocessor chip is no longer made, you are SOL.

Why? Because you don't have the interface specifications for the
custom chip. In an older radio you can look up the exact specs
for each part. If all the information you had on an older radio
part was "8 pin glass cased thing", you'd be in trouble too
(except that you could guess from the rest of the circuit).

In the microprocessor radios, you *could* do something similar
if you had the complete interface specs for the custom chip.

Remember, a decade after the custom chip was build, programmable
microprocessors (EEPROM?) with much more capacity and speed are
very likely to be available. These would most likely run a
different instruction set, but then you just need to duplicate
the external specs of the custom chip.

If only you had a *real* "technical manual" for the radio which
included the specs for the radio's microprocessor(s).

There are still some problems, like getting the replacement
pinout to somehow fit (easier in non-HT's?), soldering many pins
without a meltdown...

1158. Re: Amazing... (related to Heathkit)

Maybe it's just me, but I hardly think that because they stopped selling ham gear we should automatically assume that a company no longer exists.

I just received a catalog for Heath in the mail and yes, they do still have electronics kits. No ham stuff, but the usual "Most Accurate Clock" and "Weather Station".

It isn't the lack of ham gear, but the prices that will signal the death toll for Heath.

From: Toomas_Losin@mindlink.bc.ca
Message-ID: <11516@mindlink.bc.ca>
Source record: 290932

I have an IC-R71A receiver which uses the battery backed up SRAM scheme. What I'd like to do is read the SRAM contents so that I can restore it when the battery dies.

The radio doesn't have the computer interface option, so what I figure I'll do is pull the SRAM module, power it up, and apply the appropriate signals to read each byte. Not an elegant approach, but it'll work.

Has anyone done this? I've got some questions about what exactly the SRAM support circuitry is doing.

RUDAK transmitting Telemetry and FM Digital Voice

RUDAK is again talking!!
========================

RUDAK-II on AO-21 is now running an automated TEST SCHEDULE. For 3 minute segments, digital sound will be transmitted, including the SPUTNIK-1 beacon, which can make listening to AO-21 a little bit easier especially for demonstrations and for those who can't decode the 400 Bit/s PSK Telemetry.

The command stations are quite optimistic, since this time, the RUDAK Beacon did not just turned completely OFF after 12-16 hours as was the case in the past two RESETs. Any telemetry reports and observations are much welcomed. The command stations would especially like to know the last time heard, if the Beacon switches off once again. Send any report to DG2CV and DB2OS via UO-22.

The following was downloaded from UO-22:

SB SAT @ AMSAT $ANS-109.04
AO-16 EXPERIMENTER'S DAY

HR AMSAT NEWS SERVICE BULLETIN 109.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 18, 1992 BID:$ANS-109.04
TO ALL RADIO AMATEURS BT

AO-16 Experimenter's Day Schedule

The AO-16 Command Team has announced the following PACSAT Experimenter's Day schedule for April and May:

DATE START TIME END TIME MODE

22 Apr 0320 UTC - 22 Apr 0250 UTC - 23 Apr RCO
29 Apr 0640 UTC - 29 Apr 0610 UTC - 30 Apr RCO
06 May 2035 UTC - 05 May 2145 UTC - 06 May RCO
13 May 0455 UTC - 13 May 0425 UTC - 14 May RCO
20 May 0310 UTC - 20 May 0245 UTC - 21 May RCO
27 May 0625 UTC - 27 May 0600 UTC - 28 May RCO

RCO: Raised Cosine Only, No S-Band.

QRP operations are encouraged on Experimenter's Day. Uplink power should be limited to 20 watts EIRP. If you are using your AO-10/13 beams, this means you must crank your power back to about as low as it will probably go, no more than 2 watts. And don't forget to turn off your amplifier!

While Experimenter's Day operations are scheduled to be conducted weekly, users are reminded that these operations may be shortened or canceled to allow uploading of improved spacecraft software. Watch for bulletins on the AO-16 BBS and/or the telemetry text frame for changes to the schedule.

[ANS thanks Bruce Rahn, WB9ANQ, for this bulletin item.]

There is only one slot available in the IC-24AT. You can either get the UT-51, which is PL encode only. Or you can get the UT-50, which is BOTH encode and decode on one chip. From the price difference I have seen, do not get the UT-51...get the UT-50

>
> Gary KE4ZV

The point of my gedanken experiment was to find a high-enough-priced radio that you would balk at the thought of having to junk it for want of a chip. Thus my choice of a 781. And if it applies to a 781, why not a 735?

You're right, a 10-year-old radio HAS been through a few flea markets. But they usually work, which means the CPU has not yet gone or replacements were available. The problem here is that nobody has yet had to scrap a $3,000+ radio because they couldn't get a chip. It will be interesting to see what people say when that happens. It will also be interesting to see how fast a Yaesu 1000 or ICOM 781 can get really obsolete and go through hamfests like Kenwood 520s do now. And if there is a risk of CPU failure with no factory support, will anyone take the risk on a used 781 the way we buy old tube rigs now?

>>>happy that the ARRL *apparently* (just going by this thread) isn't
>>>interested in the LARC.

> Gentle readers, the above paragraph is what Jon uses to lable me as a
>bigot & hatemonger!

My dear friend, when you are 'quite happy' that a club you are in discriminates
against people, then you _are_ a bigot and a hatemonger. What else could you
be? Really, extending your bigotry to the point where you cannot concieve of
the great pain and harm that behaviour such as bigotry causes does not eliminate
it.

But, I don't want to continue a flame war here. My 'issue' was, I'm part of the
ARRL, and I don't condone or particpate in bigotry...

>>I suppose you're the type who's happy that they aint a lot o' them colored
>>folks in the hobby too, eh? I hope that'll change as well.

> If I believed in the same stereotypes you do, Jon, I could play your game
>& make some comment about that frilly pink dress of yours and ...the 'social
>disease.'

While pink is indeed one of my favourite of all colours (and I'm spelling with
ou's, a sure sign of faggotry) I've never owned a dress, nor desired to wear
one. Though I know of some men who do. They enjoy themselves, that's a trip :)

As for the social disease, I'm educated, I'm safe. Are your children? Both
the strayt and the Gay ones?

Well, you see... It was an charicature, a dramatic device to illuminate a
subject. In this case a person who would be 'quite happy' to be a part of
a club that discriminates against people. Oddly enough, people who enjoy,
and use radio just like YOU.

In this case we have Amateur Radio Enthusiasts (licensed by the Federal Govm't)
with diferent perspectives and cultures... That seems to be the best description
of 'what kind of person is a HAM' anyways, ALL kinds... The hobby has something
for _everyone_ is what I've heard more than a few times...

>
>>Peace... Share the world, love your brothers and sisters.
>^^
> Says the fella who just called me a "loser," "hate monger," "bigot," etc.
>all because I dared to state my own beliefs! Cool!

I didn't call you that because you 'dared to state your beliefs' but rather
because that is how _I_ felt, and how I choose to state it. You discriminate,
you exclude, that's hateful, thats bigoted, etc... I do love you though :)

Peace....

Force the Tax paying population? Hmmmmm, Yes. It is the 'law of the land' (whether you like it or not) that America (on paper at least) does NOT discriminate. Your attitude and behaviour is unamerican and embarrasing.

You certainly don't have to listen to my 'shit' as you put it. And it does not suprise me that you need to resort to such guttural obscenities to express yourself. Merely hit the 'K' key and edit away... That ought to ensure a proper anal/cranial impaction that will guarantee continued success in being ignorant and prejudiced...

>Yes, and the 700 Club, Jerry Falwell, Praise the Lord, Success-N-Life, Jack
>Van Impe, and thousands of other organizations that would surely make you
>puke have every right to advertise in your publications as well. You

>is the basis of your law-suit. And I am going to send a fax to every one of
>them and BEG them to advertise in your publications. I have a feeling they
>will like the idea very much. The ARRL should put a huge ad in QST urging
>everyone else to do likewise.

Uhm, I don't have a lawsuit. However I've decided to join the LARC, something I've been putting off for no reason... That means, I suppose, that if there is a lawsuit, I'll be a part of both sides. Interesting...

Of course, many of those organizations you've mentioned are what I consider vile and other epithets.. However they are more than welcome to advertise whereever they like, I can just skip by their hatered and obscenity and not be threatened (much.) Of course, most magazines are NOT the publications, or journal of a club. Therefore, they may have considerable more leeway in what they might accept or not in terms of advertising and editorial content.

The ARRL enjoys special advantages as a result of it's incorporation and membership operation. I'm not sure (embarrasing) just what the ARRL's mode of operation is. Is it a 501c(3) type non profit organization? If so, then obviously it is liable to obey federal non discrimination (human rights?)

laws. Is the ARRL a registered lobbying organization, what are the terms of their involvment in IARU/WARC/FCC and other operations... These all would seem to give the League a responsibility to be regulated by the laws of operation that any public or semi-public organization is bound by. Nonetheless, even if this is an entirely private club, with no strings attached, it is still a club in which *I* and other 'undesirables' are members of. Either refund my money and prepare for ANOTHER possible lawsuit or DO NOT TREAD ON ME.

>I beg to differ. Ever hear of Andea Dworkin ? She is THE leading feminist
>in the country, and she is one spooky, evil, hate preaching bitch. Last

I've certainly heard of Ms. Dworkin and while I wouldn't use such a hateful and ignorant term as 'bitch' to describe someone, (do you even have a CLUE what you're saying?) I don't believe she speaks for any Gay, Bisexual or Lesbian organization. Feminist != Lesbian. From what I've heard she _is_ rather seperatist and hateful too though. That's not _quite_ the same thing as being a NAZI though, wouldn't you agree?

>month she was giving a speech and offered a new ending to her book. She
>changed it so the heroine of the book went out and started randomly shooting
>men. All the lesbians in the audience STARTED TO CHEER. Pretty funny
>considering if I spoke in public and started talking about shooting lesbians
>I would be in deep trouble.

Are 'men' the logical opposite of 'lesbians' ??? How about women? Makes more sense that way, doesn't it? And this 'Lesbian' thing, was it a specificaly Lesbian based group, or are you one of those who is so dense as not to be able to understand the issue of womens rights?

>>
>>It bears repeating. Do NOT tread on me!
>>
>
>YOU are treading on the ARRL and all the dues paying members. That money
>is supposed to be used to combat people having their towers torn down by
>stupid city regulations, or to introduce much needed young people to amateur
>radio, or to launch new satellites. Now it will be wasted on this. This
>lawsuit will probably cost alot of money. Thanks alot.

A few notes: I am not aware of any lawsuit, the details are limited at this time. There is an issue of apparent discrimination on the part of the ARRL in not accepting an advertisement from the LARC for a satellite journal.

I suggest anyone with a copy of 73 Amateur Radio magazine should look in the classified section. There is usually a advertisement from the LARC there. Simple, looks like any other advertisement. Pays money for the publisher. Nothing offensive, IMNSHO... Take a look.

No, the money is supposed to be used to further the operations of the League in service to it's members. A radio club (of which I am more or less now a member) wanted to PAY MONEY to the League to advertise. Think clearly now...

If a lawsuit costs the League a lot of money, so much the better. If the League decides to fight such a lawsuit then they will be making a direct statement that they not only acknowledge their action, but stand behind it. If that happens I will be PLEASED to be among those waiting to tear it down brick by brick. IF the League can be cleansed of this heinous mistake then I will purchase a LIFE membership.

Get the idea?

I'd appreciate participation by others in this thread. I'd like to know the way others feel about this issue. Thanks!

1165. Mobile rig w/mods

Newsgroup: rec.radio.amateur.misc

I'm looking to purchase a good mobile rig that has the following features...

1) Transmit on 144-148, be modified to trans on 144-160 (or any variation thereof, as long as it transmits in the entire 150 range)

2) Programmable offset and tone, for example: I'd like to transmit on 155.69, then receive on 152.425...that would require a programmable offset.

3) Each memory channel can be programmed to have a different offset, say like channel 1 has offset of 8 Mhz, but channel 2 has offset of 5.5 Mhz.

I would assume that some Kenwood, Yaseu, or Icom mobile does this (I've heard that an Alinco will, but haven't checked too much into it). Anyone have any experience/suggestions/insight into a radio of this type? Thanks!

1166. Keyer timing

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-19 22:22:48 UTC
From: hardie@herald.usask.ca
Message-ID: <1992Apr19.222248.28500@access.usask.ca>
Source record: 290940

I vaguely remember reading an article a long time ago that said that there are two different ways of timing an iambic keyer's dot/dash insertion. I know that the timing on my keyer (a Trac) is much different than my friend's MFJ and neither of us can easily use the other's keyer.
Can anyone point me at an article that describes the two keyer timing methods?
Thanks.
Pete hardie@herald.usask.ca VE5VA@VE5BBS.SK.CAN.NA

1167. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 00:44:15 UTC
From: tkelso@galaxy.afit.af.mil
Message-ID: <1992Apr20.004415.12225@afit.af.mil>
Source record: 290941

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly) and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.misc. This week's elements are provided below.

just a quick note..... i had one of those plastic battery case locks break
on my wifes ft470. i called yaesu and they sent me 3 of them for free.
i'm not sure what the problem is over there but it sounds like maybe
you need to talk to yaesu in japan and see what their thoughts on the matter
are. also, i imagine someone over here could be nice enought to pick one
up and send it to you. maybe even a couple of them. 73's mike nason ka7hbb

I'm preparing for a No-Code Technician license (Somehow I just can't get up to 5 WPM solid...) but am EXTREMELY bewildered as to what kind of equipment I should start out with. The No-Code license allows only 6-meter and under; How bad is that? In short, WHAT GOOD IS MY LICENSE ONCE I'VE GOT IT? From what I've read in "Now You're Talking", hams seem to spend all their time talking about the weather (or such is the impression given). What do hams DO with all this equipment? It would seem to me that simply making contact after contact (CQ CQ CQ... HIYA. HOWS THE WEATHER... QSL? QSL. BYE KA9Q) would lose its attraction after awhile. The only thing which immediately grabs my interest is packet radio: How much is a TNC, and are there packet transmissions in the 6-meter and below bands?

I realize I sound frantic, but I don't really know any hams personally; The only guy who has any idea is a friend of mine who is unlicensed, has only a scanner, and continually refers to propagation as "propaganda".

Ben Feen

Are you getting HongKong and Honolulu from Monash? or are you
there? If so, what other frequencies do you get?

Message-ID: <619@swamps.UUCP>
Source record: 290947

I'm interested in the IC 2410 radio, and was wondering if there were any owners who could comment. I am also interested in reports of any out-of-band coverage the receiver may offer. For example, does it get the AM band from 118-138 MHz, or ~465-470 MHz?

Thanks.

SB SAT @ AMSAT $ANS-109.01
RUDAK TALKING AGAIN

HR AMSAT NEWS SERVICE BULLETIN 109.01 FROM AMSAT HQ
SILVER SPRING, MD APRIL 18, 1992 BID:$ANS-109.01
TO ALL RADIO AMATEURS BT

RUDAK transmitting Telemetry and FM Digital Voice

RUDAK is again talking!!
========================

RUDAK-II on AO-21 is now running an automated TEST SCHEDULE. For 3 minute
segments, digital sound will be transmitted, including the SPUTNIK-1 beacon,
which can make listening to AO-21 a little bit easier especially for
demonstrations and for those who can't decode the 400 Bit/s PSK Telemetry.

The command stations are quite optimistic, since this time, the RUDAK Beacon
did not just turned completely OFF after 12-16 hours as was the case in the
past two RESETs. Any telemetry reports and observations are much welcomed.
The command stations would especially like to know the last time heard, if the
Beacon switches off once again. Send any report to DG2CV and DB2OS via UO-22.

The following was downloaded from UO-22:

AMSAT-NA Operations Net Schedule

AMSAT Operations Nets are planned for the following times. Mod Nets
are conducted on AO-13 on a downlink frequency of 145.950 MHz and Mode J/L
Nets on a downlink of 435.970 MHz.

Date UTC Mode Phs NCS Alt

26-Apr-92 0050 B 137 WA5ZIB WB6LLO
3-May-92 0200 B 85 W9ODI N7NQM
9-May-92 2300 B 192 N7NQM WA5ZIB

Guest commentators are planned. Join the Net if you have questions.
In the unlikely event that either the Net Control Station (NCS) or
the alternate do not call up frequency, any participant is invited to
act as NCS.

****

Slow Scan Television on AO-13

Mode B downlink of 145.925 MHz at MA 135 on UTC Sundays. Also try Mode J
downlink of 435.980 MHz at MA 135 on UTC Saturdays.

SB SAT @ AMSAT $ANS-109.04
AO-16 EXPERIMENTER'S DAY

HR AMSAT NEWS SERVICE BULLETIN 109.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 18, 1992 BID:$ANS-109.04
TO ALL RADIO AMATEURS BT

AO-16 Experimenter's Day Schedule

The AO-16 Command Team has announced the following PACSAT Experimenter's Day
schedule for April and May:

DATE START TIME END TIME MODE

22 Apr 0320 UTC - 22 Apr 0250 UTC - 23 Apr RCO
29 Apr 0640 UTC - 29 Apr 0610 UTC - 30 Apr RCO
06 May 2035 UTC - 05 May 2145 UTC - 06 May RCO
13 May 0455 UTC - 13 May 0425 UTC - 14 May RCO
20 May 0310 UTC - 20 May 0245 UTC - 21 May RCO
27 May 0625 UTC - 27 May 0600 UTC - 28 May RCO

RCO: Raised Cosine Only, No S-Band.

QRP operations are encouraged on Experimenter's Day. Uplink power should
be limited to 20 watts EIRP. If you are using your AO-10/13 beams, this
means you must crank your power back to about as low as it will probably
go, no more than 2 watts. And don't forget to turn off your amplifier!

While Experimenter's Day operations are scheduled to be conducted weekly,
users are reminded that these operations may be shortened or canceled to
allow uploading of improved spacecraft software. Watch for bulletins on
the AO-16 BBS and/or the telemetry text frame for changes to the schedule.

[ANS thanks Bruce Rahn, WB9ANQ, for this bulletin item.]

RTTY DX Notes 17 April
RTTY DX notes for week ending 17 April, 1992 (BID RTDX0417)

This weekend is the 2nd SARTG AMTOR DX contest. We expect lots of
AMTOR on the bands and we wish everyone lots contacts. Don't forget
to call in FEC and pass your message on ARQ. Bands 3.5, 7, 14, 21 and
28 MHz. Time 0000-0800 UTC, 18th April, 1600-2400 UTC 18th April, and
0800-1600 UTC 19th April. Exchange RST, Name and QSO number.

Our thanks this week go to I5ICY, I5IGQ, TG9VT, VK2SG, VK2EG, W2JGR
and the Twin Cities DX Packet Cluster network, WB2CJL, N5PSI, UT5RP,
DJ3IW and the DB0SPC Central Europe DX Packet Cluster. Thank you all
for your assistance in putting these notes together.

Notes of interest:

Bangladesh (S2). With great surprise S2/HA5BUS showed up on RTTY doing a marvelous job on the air. The operator Imi (HA5HO) is transmitting from Dhaka and states they will be active till April 21 or 22nd. We all hope the DXAC Desk will accept this operation as done earlier for EP/HA5BUS . QSL goes to GLOBEX Foundation, Box 49, 1131 Budapest, Hungary. Their next stop will be Malaysia.

N5PSI, Mike, informs us that he became the QSL manager for 5N3ZIP. Prior to this, the Nigeria station didn't have a QSL route or QSL's. Mike will attempt to get past logs for contacts prior to April 92'. N5PSI is good in 91' and 92 callbooks. Pse QSL direct only.

ST. Kitts (V44). A Japanese group plans to be active from this Island from April 29th til May 3rd on CW, SSB and RTTY.

>From Friday April 24th Syd, (VK2SG) will take back the notes. Many people, TG9VT among others, will be in Dayton and for that he cannot distribute as normal the notes. So those interested must pick it up themselves from TG9VT APlink. VK2SG will see that it is in TG9VT box. Be welcome and the next week everything be normalized.

Thank you all for the help during Syd's absence and let me end by wishing the readers, Happy Easter.

well, i would say your hearing ship to shore radio telephone conversations.
i don't remember the frequencies right off since a lot of them changed in
the last year. as to the low frequency airport info from memory it sounds
like they're on the vor beacon freqs that the air craft use for lining up
on the airports from fairly long distances.
i believe pop com magazine ran an article on the changes in the marine
frequencies about a year ago. i can look around and see if i still have
that issue. i don't subscribe anymore but i occationally pick up a copy.
by the way, for general sw listening they do have some go information
in them. too bad i don't have much time to do it these days.

I have an IC-720, now 12+ years old. It was the *first* new radio
I had ever purchased. Prior to its purchase I operated a succession
of *old* radios, none *younger* than 10 or 15 years old.

I bought a new radio in 1980; and another in early 90. Everything else
has been old.

Icom makes radios that perform well and have lots of nice features.
But looking to the future, maybe we need a standard "bus" that we
can plug RF, IF, synthesizer, and detector boards into. My other
new radio, a JRC NRD-525, is constructed in this fashion. Some of
the other manufacturers are also using plug in boards, though I doubt
there's any commonality at this point.

It's a thought anyway.....

Source record: 290952

No-one expects anything to last for ever. But everyone wants things that they buy to have a "reasonable" life. So what is reasonable ?

I think most people would accept the demise of a piece of equipment after sufficient years for them to brag about how long it lasted, if it had degraded gracefully and fairly uniformly, if newer equipment offered real performance and/or ergonomic improvements. Perhaps a good example would be the old FT200, their drift is now no longer seen as acceptable, the rate their users are having to replace capacitors, rectifiers and valves is becoming a nuisance, their owners can still keep them going *if they want to* but maybe it seems no longer worth the effort. An old friend that has served well.

What would make me angry would be a piece of equipment still capable of good performance, in showroom condition - just needs U783 replacing to make it go again, but that part is no longer available. Now, a great many obsoleted parts can be circumvented but custom IC's and special switches can be beyond even heroic measures. The unacceptable failure is usually abrupt, and has no alternative fix, the owner is left with a feeling of being the victim of a crime

I have an ICOM, an IC 765 HF rig. I bought it after very serious borrowing and measuring of the contenders. I would NOT swap it for a 781/950/1000, they do not meet my requirements as well. I know that the PSU control IC is obsolete, but I have a spare and would be very embarrassed if I couldn't design an alternative anyway. Should the main CPU or the controller for the ATU fail, then there is no viable alternative to an original part.

What I would VERY STRONGLY attack all of the manufacturers for is pricing policy.

MY IC 765 COST $4800 at the exchange rate at time of purchase.

The US price was ~ $2600

UK import taxes would have added ~ $540

Someone not only made $1660 out of me, but they also got the US import tax value and also the UK tax value on the US tax value to keep for themselves. All this in addition to what the US importers and dealers consider to be an adequate profit.

This is not singling Icom out, all the others are just as greedy.

BUT at these prices, I expect incredibly good service. The importer should be able to archive one entire set of parts for every unit sold !

All my own thoughts, of course

GM4ZNX

Hi Gary,

I've just worked out how you get warranty repairs on your HP45.

1) To have bought onr in 1966, you must have a time-machine.

2) Whenever a batterypack dies or a key wears out, you just pop it back into the time machine and send it back to within a year or few of the date of purchase to have it fixed.

Now we've got to work out a way to prevent such scams ever being used on our warranty schemes.....

Sorry, that typo was far too good to miss :-)

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 058 (OPDX.058)
April 21, 1992
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, K4CEF & Southeastern Cluster Group, DXNL, DF4RD, KE2LJ, WB3LHD, WK3N, NR3Z, N6MZ, KQ8M, KE9KD and K0GU for the following DX information.

1A0KM/IT, PALERMO, SICILY. It has been reported by Tony, I0IJ, who runs the 1A0KM operation, that the 1A0KM/IT are UNICEF people operating in Palermo and this station does not count for the Sov. Mil. Order of Malta (SMOM). Tony does not know why they are using the 1A0KM call. One of the operators of 1A0KM/IT9 whose name is also Tony,Astated to QSL to IT9ZGY. Tony (I0IJ) stated that there is no truth to the rumor that the 1A0KM operations have been halted due to the disruptions caused by the last operation. Tony (I0IJ) said it is a very large undertaking for him to run the 1A0KM operation and that he will not be able
to do it this yoar.
But, he promised an operation in early 1993.

4U7ITU, ITU GENEVA. Gian, I1RBJ, will be active May 1-3 with the special callsign 4U7ITU. Information on his activities (bands/modes) was not available at this time.

4W, YEMEM. On April 18th, around 0030z, the International Amateur Radio Society Net on 14243 kHz ran a mystery DX station for their members only (list), guest were invited later. The mystery station's callsign was kept a secret until all the lists were run. Even the net controller did not know who the station was. Each station that worked the mystery station was to address him as Marcel (who had a French accent). After being on the air for 30 minutes, they announced the station was 4W0Mk. The suffix "MD" is reported to be the man's initials. PA3AZF appeared on the net with 4W0MD and spoke French with him during the whole session and is reportedly his QSL manager. It is said that 4W0MD will be appearing on that net somewhat irregularly in the coming days. (This is interesting, because both 4W (Yemen Arab Rep.) and 7O (Peoples's Dem. Rep. of Yemen) were deleted when both countries reunited and was replaced with a new 7O (Yemen).

6T2YD/SA, SUAKIN ARCHIPELAGO. Yannick of ST2YD and ST0YD operations is now active as 6T2YD/SA. The /SA stands for Suakin Archipelago and counts for IOTA AF-62. Yannick has been heard on 14256 kHz around 2145 to 0145zn

21260 kHz at 1230z and 28480 kHz at 1200z. For DXCC purposes this counts for ST (Sudan). His length of stay is unknown, but QSL to F6AJA.

7Q, MALAWI. There has been plenty of activity from this one. Paul, 7Q7BW, and Chrstine, 7Q7BX, have been very active on the Afikaaner net on 21355 kHz. Look for them around 1900-2000z daily. 7Q7BX has also been heard on 28480 kHz around 1220z. QSL to N5MHZ. For CW activity, look for 7Q7XX on 21025/1900z and 14011/0520z, and 7Q7RM on 28021/2020z (QSL to G0IAS).

9G, GHANA. Activity by 9G3CC has been reported from Europe on 10 and 15 meters CW/SSB. Spots on the Ohio/Penn Network show activity on 21020 and 21235 kHz around 1200z. QSL via F6FNU, but remember WFWL! (9G was ranked 9th in the OPDX/NODXA 1991 Most Wanted List)

A4, OMAN. Look for the following station active from here: A41KB on 14222 around 0238z, A47RS on 21317 kHz around 1600z, A45ZX operating RTTY on 14083+/- kHz around 0120z and A45ZZ on 18140 kHz between 0200-0430z.

JY, JORDON. Joe, JY9ZK, has been hitting the nets pretty heavily. Look for him around 0000z on the 14226 net and sometime around 0400z on the 14236 and 14256 nets. QSLs go to KA5ZMK.

KH9, WAKE ISLANDS. Remember to look for Bill, KA3HMS, to be active from here April 22-25, only on 10 and 15 meters.

LU3CQ/D. This station has been active this week from Marteen Garcia Island (IOTA SA-55). Check the following frequencies: 28460 kHz around 1200z and again at 2022z, 28025 Khz around 1300z and 21260 kHz around 2130z. QSL via LU3AJW.

P5, NORTH KOREA (UPDATE). The stations signing P5IARU and HM5VR and claiming to be Seppo, OH1VR, turn out to be pirate stations. Seppo is reported to be stateside and was also at the DX Convention in Visalia. Seppo states he knows nothing of these P5 operations. He also stated that he was not optimistic about a May operation from P5, but there are many reports stating that activity for P5 is to begin sometime in May. KYFC!

S2, BANGLADESH, Imi, HA5HO, told your editor that he would be leaving S2 April 22 and the ops are trying to make the most of the time they have left. They have reportly been trying 40 meters around 2200-2300z, but have met with little or no success to stateside. Although it was reported that they had applied for an extension to their operating permit, it is evident the authorites did not extend it. Also, it has been reported that their next stop would be Malaysia.

ST0, SOUTHERN SUDAN. Remember, John, PA3CXC, is expected to be active from here April 18 to 28. He will be signing his ususal /ST0. As reported a couple a weeks ago, ST0 is currently under consideration by the DXAC to be deleted from the DXCC's country list. John may also try to travel to Uganda on a business and sign 5X5CW.

TZ, MALI. Larry, TZ6ZZ, has been active on 28503 kHz from 0130 to around 0300z working lots of stateside and VKs. QSL via N0BLD.

SILENT KEY. Well known DXer and Jesuit priest, Father Marshall Moran, 9N1MM, has died of a heart attack on April 13 in New Delhi, India. Many will remember and miss all his activity from Nepal. He was reported to be 85 years old and has been ill over the past month. Word has it that he will be returned to the school grounds in Nepal for burial.

QSL CARDS IN THE MAIL. Navassa QSL cards for the January DXpedition are now being received. S21NQ cards are being received from W4FRU with a stamp on the back of the card stating the following: This QSL may not be accepted by all Radio Societies for award purposes. VK9XM cards are being received from W5BOS.

EDITOR'S SPECIAL NOTE: There probably will not be a bulletin next week, because I will be at the Dayton Hamvention. I usually write the bulletin during the weekend so the information is current. But you never know! So PLEASE keep the information coming..... de Tedd KB8NW

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

1181. DXCC and Incoming QSL Bureau Questions

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 12:10:47 UTC
From: ginsburg@wellfleet.COM
Message-ID: <9204201211.AA04701@ginzo.wellfleet>
Source record: 290955

Are confirmed contacts that I made 15 years ago from W2 land good for DXCC now that I'm living permanently in W1 land, or do I have to work those places all over again?

I think the answer to this next question is yes, but I'd appreciate confirmation. Even though I'm a W2 living in MA, my incoming QSL bureau is still the W2 bureau, right?

Thanks and 73,
Scott WA2CJT

1182. Dayton Directions?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 12:29:45 UTC
From: SGU@stc10.ctd.ornl.gov
Message-ID: <920420082905.2181d62b@STC10.CTD.ORNL.GOV>
Source record: 290956

Can anyone in Dayton give me directions to Stouffer's?
I will be going north on I-75 and would like to know
which exit to take and how to get there from the
interstate.

Thanks,
Sally, WB4NDX

1183. Voice Keyer Memory Connectors?

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 12:57:54 UTC
From: wrb@cbnews.cb.att.com
Message-ID: <1992Apr20.125754.1745@cbnews.cb.att.com>
Source record: 290957

Can anyone tell me what type of connectors are usually found on voice keyers to activate the memories? I am building a K8CC-type interface to use with CT and (for reasons I would rather not explain) I don't know what type of connector should go on the voice keyer end.

Thanks and 73,

Wally Blackburn AA8DX

>now already obsolete.

Yes old tube HF amplifiers haven't changed much. Only a couple of
solid state amps are around, the Ten-Tec Titan and the Icom IC2KL.
But that's about to change. Solid state high power amps are sweeping
the broadcast industry and it's only a matter of time before they
dominate ham radio as well. 50 kw solid state transmitters are now
available commercially and power tube manufacturers are starting to
discontinue many power tubes. It's sadly another case where amateurs
lag commercial technology.

I'm in the broadcast business, and we're normally very conservative
and reluctant to give up proven technology. But today's solid state
power modules are so reliable and use so much less power that the
changeover was inevitable. No more filaments, no huge blowers, just
little fans. And they seem to stand up to lightning strikes at least
as well as the tube equipment. Failures are usually soft too with only
a small degradation of output rather than being off the air. You can
work on them hot and don't need a Jesus stick to avoid electrocution.
Hams will use them too, someday.

Gary KE4ZV

1185. Welcome to the Amateur Service

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 14:27:35 UTC

>merely a bludgeon to use on those of us who wanted to protect ham radio.
>Well, we've lost that battle.

When I read Jay's posting this morning, the questions that came into my mind were "Protect ham radio from whom or what?" and "Lost what battle?" I've been reading r.r.a.* for several weeks now, and, among other things, I've been following the "Morris thread". Unless I've grossly misunderstood what I've been reading (and in a way I hope I have), I can only conclude that Jay wanted to protect amateur radio from me.

You see, I passed elements (2) and (3a) on 3/9 and on 4/18 my Technician license came in the mail. Observant readers will see immediately that I came into the hobby by what some may call a "back door". I am sure that in his own way, Jay has the best interests of the amateur service at heart, but my excitement over my newly minted license was dampened a bit by Jay's no doubt well-intentioned, but none the less chilly welcome to the hobby.

(Btw, observant readers will also see that it took only 40 days for my license to come in. Pretty quick, no? I was pretty pleased!)

Jay's welcome constrasted sharply with my experience last Thursday night when I attended the first meeting of a newly-formed amateur radio club in my area. At one point in the meeting, the president of the club asked that we all state our names and callsigns one-by-one. When my turn came around, I gave my name but explained that while I had passed the Tech test last month, my license hadn't come in yet, but that I was very anxious to get it, and very excited about getting involved both with the hobby and a local group of amateurs. The three dozen other hams in the room (mostly Advanced and Extra, btw) broke out into spontaneous applause, welcoming me warmly both to the hobby and to the club. Nobody asked me whether I learned the code or wanted to before they applauded/greeted me; they just made me feel welcome.

After the meeting, a number of those same Advanceds and Extras came to me personally offering their help if I had any interest in learning the code. Nobody said that I "should" learn the code or that "*real* hams do cw" or anything like that. Instead, I got a real feeling that whatever I wanted to do in the hobby, these people had a genuine interest in helping me along in their respective areas of expertise. I'm very glad I hooked up with the Nashoba Valley Amateur Radio Club in Pepperell, MA, a group of people who

treated me with a warmth and friendliness in keeping with the true spirit of the Amateur Service (at least as someone as new as me understands it).

--

Marco N1MAE ("codless" for now :-)

ps. Among other things, I'm very interested in VHF/UHF packet and experimenting with all modes on 10-GHz (to each their own, no?). Finding elmers for packet was a breeze, but 10-GHz experimenters are fewer and farther between. If you share an interest in 10-GHz, I'd really love to hear from you. E-mail to marcoh@locus.com. Thanks!

1186. Bearcat Scanner, mods request

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 14:29:26 UTC
From: vojak@icemaker.stortek.com
Message-ID: <1992Apr20.142926.7347@stortek.com>
Source record: 290960

Hi,

My handheld cobra SR71 scanner fried itself after 5 years of use.
Today I am going out to pick up a Bearcat XL100, and was wondering:

1) Are there any mods available for the XL100?

2) Does Uniden make an adaptor pack that would allow you to
use standard batteries? I don't mind the rechargable pack,
and intend on getting a spare. But sometimes if you are away
from a AC source for a long time, it would be nice to be
able to just use AAs. Some of the RadioShack scanners can
take either AA batteries or rechargables, but. . . they
don't have the audio output or the reception of the bearcats.

3) A long time ago someone posted a mod which helped extend the
battery life per charge. (disconnect the low battery cut-off?).
Anybody have this mod?

Please E-Mail any responses.

Thanks
Bill Vojak

1187. GLB 400 Channelizer

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 14:30:50 UTC
From: benchoff@groupw.cns.vt.edu
Message-ID: <3779@vtserf.cc.vt.edu>
Source record: 290961

I have recently purchased an old radio with a GLB 400B Channelizer. It seems to work fine and I have the assembly instructions and the operating instructions. It also has an option board marked 600B and a SPDT switch on the front panel. I assume this is the frequency multiplier option, but I am not sure. Does anyone have any info on that particular option? How about the 5kHz option? It sure would be more useful with that.

1188. Wilson T-1402SM HT

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 14:33:47 UTC
From: benchoff@groupw.cns.vt.edu

Does anyone know the crystal formulas for a Wilson T-1402SM HT. I have one with no instructions.

Thanks,
Phil KC4ZEN

1189. Transistor GD 170-C cross needed.

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 14:41:29 UTC
From: johnb@uwovax.uwo.ca
Message-ID: <1992Apr20.094129.1217@uwovax.uwo.ca>
Source record: 290963

I need a new transistor for GD 170-C for a radio that I think was made in Germany (Rema Arietts 738/2). I have enquired all around town (London, Ontario, Canada - population almost 300,000) and no repair shops have anything on this transistor.

Could anybody tell me what the cross-reference replacement # for this transistor, or where I can get an original replacement.

Please e-mail to JOHNB@UWOVAX.UWO.CA

1190. 3rd CFV and VOTE ACK: rec.radio.broadcasting moderated

Newsgroup: rec.radio.amateur.misc
Date: 1992-04-20 14:53:08 UTC
From: wdp@gagme.chi.il.us
Message-ID: <1992Apr20.145308.4773@uunet.uu.net>
Source record: 290964
Cross-posted to: news.announce.newgroups,news.groups,rec.radio.noncomm,rec.radio.shortwave,rec.radio.amateur.misc
Body handling: HTML body converted to readable text

This is the _Third_ Call For Votes and second vote ack for the creation of a new Usenet newsgroup entitled 'rec.radio.broadcasting'. For those of you who have not yet seen the original CFV, I have included most of it in this posting. At the end of the CFV, there is a mass ack of votes received between April 9 - 16, 1992. If you have not voted yet, and have an interest in this group, please vote now.

Voting will end April 30, 1992 at 12:00 midnight central daylight time.

Please read and follow voting guidelines carefully to assure that your vote will be counted, and that there will be no confusion.

============================ CFV rec.radio.broadcasting ====================

STATUS: Moderated.

PURPOSE: This group will be for the discussion of a wide variety of subjects pertaining to the general arena of domestic radio broadcasting. Topics of discussion might include (but not be limited to): Programming, Engineering/Technical, Radio news and political coverage, Challenges of secondary market stations, Innovations and legislation affecting the media, Historical and cultural significance, Network radio, Domestic pirate broadcasting, Differences and similarities in 'domestic' radio of various nations, General items of interest to broadcast professionals, hopefuls, affectionados, and casual listeners, Assistance to those desiring to enter the industry by providing a 'networking' infrastructure.

REASONS: Everybody listens to the radio. It influences our lives, our political beliefs, musical tastes, purchasing habits, and (hopefully) stimulates our imagination. Radio, in it's many forms, is pervasive. It is the only mass media in which one can fully participate while engaged in another activity. Amazingly, there is no Usenet newsgroup dedicated to the overall topic of radio broadcasting.

LIMITS: I do not envision rec.radio.broadcasting to be a replacement for such groups as rec.radio.noncomm or rec.radio.shortwave. Rec.radio broadcasting (r.r.b) would try to avoid dealing with subjects which are directly and _specifically_ related to the charter(s) of these groups, but will gladly cover _any_ subject which has significance to radio broadcasting in general, even if it involves

noncommercial or shortwave stations. R.r.b would be
likely to shy away from discussions (flame wars) about
specific performers & bands, except as it pertains to radio
programming and formats (there are many .music groups on
the net for such discussions).

MODERATION: I have proposed this as a moderated group. I have also
volunteered to serve as that moderator. I believe in a
very 'light-handed' approach to moderation. Basically no
more than a buffer, re-directing misplaced articles, attempting
to quell excessive 'free-for-all-flame-fests' :-), and trying
to keep the signal/noise ratio on the 'signal' side :-).
*** I AM NOT A CENSOR ***. I will NEVER kill an article
because it clashes with my beliefs or opinions! In addition,
I have my own dedicated Unix system with it's own direct
Internet e-mail feed, I have time and energy to dedicate
to the project, I have had a life-long involvement with
radio and communication, plus the wise counsel and support
of many in the industry, and on the net.

==========

TO VOTE YES, SEND E-MAIL TO 'yes-rrb@gagme.chi.il.us' (OMIT THE QUOTES)
TO VOTE NO, SEND E-MAIL TO 'no-rrb@gagme.chi.il.us'

Only votes sent by e-mail, to the above address will be counted!
Do not respond directly to this post. Voting will end on 4/30/92.
No conditional votes will be accepted (I.E "I would vote [...] if [...])

Votes should have a line in the subject or body of the letter stating clear
intent, such as..

"I vote yes on rec.radio.broadcasting as proposed"
_OR_
"I vote no on rec.radio.broadcasting as proposed"

... or some similar non-ambiguous statement.
